9164. Moles, Abraham A. (U. Strasbourg, France) **The diffusion of semantic differential concepts in France.** *International Review of Applied Psychology*, 1970(Oct), Vol. 19(2), 109-123.—The methods based on the "semantic space concepts," developed chiefly by Osgood and his collaborators, have become well known in France and have given use to applications in the fields of market research, psychoesthetics, and cross-cultural areas. Typical studies include Enel's "A semantic differential for judging posters," Bauer and Niedhammer's "Dimensions for judging sound objects," Grunewald's "The cross-cultural study on Jewish alterity," and Menahem's "Line concepts as a com-

ponent of personality." In Europe, there is a tendency to be more interested in the underlying principles and general attitude connected with these methods rather than to follow standardized routine procedures which have characterized cross-cultural studies until now. A recent example of this research involved a sample of 320 Jews and non-Jews. A semantic differential test was applied with 50 relative concepts over 20 scales. Results have not yet been reported. 9166. Brown, Bobby R. (Pennsylvania State U.) **An empirical investigation of the effects of violations of assumptions upon certain tests of the product moment correlation coefficient.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1613.

9167. Cole, Nancy S. & Cole, James W. (U. Iowa) **An analysis of spatial configuration and its application to research in higher education.** *ACT Research Report*, 1970(Aug), No. 35, 17 p.—Presents an analysis of the spatial configuration of variables in a multivariate system to clarify the relationships among the variables by locating them in a minimally dimensioned space. Similarly, individuals are located in the smaller space and related to each other on the basis of the variables measured. The analysis is then used to locate some colleges on a planar surface on the basis of variables given by A. W. Astin. In the configuration of colleges in the plane, a college is described in terms of its relative orientation to several educational aspects and the resulting single point location is suggested as a valuable alternative to profile analysis.—*Journal abstract*.

9169. Harris, David R., Bisbee, Charles T., & Evans, Selby H. (Texas Christian U.) **Further comments: Misuse of analysis of covariance.** *Psychological Bulletin*, 1971(Mar), Vol. 75(3), 220-222.—Attempts to clarify some points of disagreement between D. A. Sprott (see PA, Vol. 44:9565) and S. H. Evans and E. J. Anastasio (see PA, Vol. 42:9688). Examination of Sprott's discussion reveals that much of his argument rests on assuming an unconventional random effects model for the analysis of covariance. Sprott used only 1 regression term in his covariance model, which is tantamount to assuming homogeneity of within-between regression and inconsistent with the presence of a separate regression effect associated with treatments. It is reasserted after consideration of Sprott's comments that valid use of the analysis of covariance requires that the covariate be unaffected by the treatment. Consideration of a regression approach when the assumptions of the analysis of covariance are violated is recommended.—*Journal abstract*.

9170. Jensen, Arthur R. (U. California, Berkeley) **Note on why genetic correlations are not squared.** *Psychological Bulletin*, 1971, Vol. 75(3), 223-224.—Re-

ports that correlations between related persons (e.g., twins, siblings, parent-child, etc.) should not be squared in order to determine the proportion of variance they have in common. The correlation coefficient itself is this proportion. The purpose of the correlation is not to predict the variance in a given trait for 1 set of persons from a knowledge of the trait values of their relatives, but to express the degree of overlap in trait variance, i.e., the proportion of variance in common. The rationale of genetic correlations is explained, with examples in terms of a common elements model of correlation.—*Journal abstract*.

9171. Johnson, Carleton A. (Catholic U., Puerto Rico) **The Type II error. Perceptual & Motor Skills**, 1970(Dec), Vol. 31(3), 724.—Presents an example of a Type II error, the acceptance of a null hypothesis when it is, in fact, false. The statistical analysis of a mouse who pressed a left lever once and a right lever twice for 20 manipulations would indicate a random pattern, when, in fact, it is $\frac{1}{4}$ time.—S. Knapp.

Journal of Experimental Education**, 1969(Sum), Vol. 37(4), 57-59.—Despite repeated warnings against its usage, researchers and textbook authors continue to employ the phrase "level of confidence" as a synonym for the phrase "level of significance." 3 possible sources of this incorrect usage are noted: (a) imitation, (b) the related but different concepts of fiducial inference and confidence interval estimation, and (c) the myriad of terms associated with confidence. It is recommended that the magnitude of level of confidence be restricted to that of the complement of the level of significance and that the term level of confidence should be used only in connection with interval estimation. TESTING

Construction & Validation

9179. Gross, Jerry C., Joiner, Lee M., Holt, Laurence E., & Sommers, Paul. (Minneapolis Public Schools, Minn.) **A kinesio-perceptual test's reliability and validity with retarded subjects. Journal of Special Education**, 1970(Spring), Vol. 4(2), 223-231.—Developed and tested a kinesio-perceptual test with retardates as to scoring objectivity, reliability, predictive validity, and cross-validation. Results indicate that most subtests could be objectively scored with the exception of ocular-motor control. Reliability coefficients ranged from .30-.99 with 7 out of 12 being greater than .70. Those items which demanded greater concentration, memory, and focused attention produced greater variations in performance over time. Predictive validity was measured by correlating scores with reading and arithmetic performance. The correlation was .57 with arithmetic and .37 with reading. Cross-validation results indicate little predictive validity to another population. It is concluded that it may be dangerous to generalize concerning the function of various perceptual-motor variables beyond the parameters of the population on which the validity studies are conducted.—L. M. Glidden.

9180. Woodmansee, John J. & Tucker, Richard D. (Wake Forest U.) **A scale of black separatism. Psychological Reports**, 1970(Dec), Vol. 27(3), 855-858.—Describes a revision of the Black Power Sentiment Scale as a measure of black separatism. Reliability of the 24-item scale was .80 (Cronbach's alpha). A study based on responses of 257 Negro students supported the validity of the scale in identifying black separatist extremism of the Black Panther variety.—*Journal abstract*.

EXPERIMENTATION & OBSERVATION

9183. Goodstein, Leonard D. & Brazis, Karen L. (U. Cincinnati) **Psychology of scientist: XXX. Credibility**

of psychologists: An empirical study. *Psychological Reports*, 1970(Dec), Vol. 27(3), 835-838.—In order to evaluate the effects of bias among psychologists, 2 identical abstracts of empirical research in astrology were prepared, 1 with positive findings and the other with negative findings. The data, collected by mail from a random selection of 1000 professional psychologists, indicate that those Ss receiving the negative abstract rated the study as better designed, more valid, and having more adequate conclusions than those receiving the positive abstract. The emotional, spontaneous comments included with the responses suggests that strong affective reactions and prejudgments are involved.—*Journal abstract.*

9184. Kilty, Keith M. (Yale U.) **Consistency between and within subjects.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 701-702.—Presents a note of caution concerning correlational procedures for analyzing data regarding theoretical models, postulating that the same relationships hold both for any given S and over a sample of Ss. 2 methods of correlation (between and within Ss) are available, but do not necessarily give the same results. It is suggested that the statistical techniques presently available may not be up to the tasks for which they are used and that a correlational method is needed for 3 modes of data.—*Journal abstract.*

9185. Souren, Grégor; van der Kloot, Wim, & van Bergen, Annie. (State U., Inst. of Psychology, Leyden, Netherlands) **Het Rosenthal-Effect.** [The Rosenthal-effect.] *Psychologisch Instituut Rijksuniversiteit, Leiden, Rapport*, 1969, No. SP 002-69, 103 p.—Studied the problem of experimenter bias by 4 experiments. Apart from some necessary modifications the experimental situation has been modeled after R. Rosenthal and K. L. Fode's (see PA, Vol. 38:3523) basic experiment. Experimentally induced E outcome expectation was the main variable, 3 other variables were also studied: the degree of ambiguity of the stimulus material; the degree of training of the Es; and the degree to which the Es were actively engaged in the process of collecting the data from their Ss. All 4 variables were studied in 2 experimental investigations; the latter variable was studied once more in a separately designed experiment. A field experiment also was performed within the daily routine of testing applicants for government posts. In none of the experimental variations was an effect of the Es outcome expectations obtained. According to the answers to a postexperimentally presented questionnaire, the Es had the impression that the scores of their Ss more or less resembled the experimentally induced expectations. PERCEPTION

9190. Fidell, Sanford. (Bolt Beranek & Newman, Van Nuys, Calif.) **Sensory function in multimodal signal detection.** *Journal of the Acoustical Society of America*, 1970(Apr), Vol. 47(4, Pt. 2), 1009-1015.—Tested 5 female undergraduates on a 2-interval forced-choice task involving the detection of a sinusoid in noise, where the signal could occur on an earphone, an oscilloscope, or both devices simultaneously. Detection performance was studied as related to (a) mode of occurrence of the signal (s), (b) the external noise correlation in the auditory and visual channels, and (c) Os' a priori knowledge of the mode of occurrence of the signal. Improvement in sensitivity (measured in d' units) as a function of bimodal signal presentation closely followed the predictions of a statistical summation model and was much lower than predicted by linear and probabilistic addition models. Under conditions of independence of noise in the auditory and visual channels, some improvements in sensitivity were of almost 3 db. Improvement in sensitivity afforded by a priori knowledge of the mode of occurrence of the signal was less for bimodal signals than for unimodal signals.—*Journal abstract.*

9191. Hicks, Ronald G. (Plymouth State Home & Training School, Northville, Mich.) **Cross-modality matching in decision making.** *Journal of Auditory Research*, 1969(Jul), Vol. 9(3), 200-206.—Cross-modality matching was performed using electrodermal stimuli in the sensory probabalistic zone ("threshold") and a simultaneously weak adjustable white noise signal. Ss were able to adjust the loudness of the noise to the perceived magnitude of the shock, but verbal confidence ratings were more accurate in signal detection than auditory cross-modality matching. Moreover, the verbal confidence ratings appeared to influence the accompanying auditory matching task by increasing the accuracy of the latter. Once sensory data are verbally coded it appears to interact with the cross-modality

matching task. Such an interaction effect could conceivably be attributed to 1 or both of 2 difficulties in human sensory information processing: (a) Ss incorrectly perceive or understand the diagnostic value of the sensory information, and/or (b) Ss have difficulty integrating the correctly perceived sensory information. Consequently, once sensory information is verbally coded it provides either an increased diagnostic value of the sensory data or increases the integration of the sensory data.—*Journal summary*.

Illusion

9195. Kolehmainen, K. & Mikkonen, V. (U. Turku, Inst. of Psychology, Finland) **Apparent weight differences as a source of after-effects.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 161-166.—Investigated perceptual aftereffects in 2 experiments using the size-weight illusion (SWI). In Exp. I, 30 undergraduates obtained quantitative measures of the apparent weight differences between the inspection stimuli, i.e., to scale the SWI. The relationship between heaviness and size is described by a simple power function. In Exp. II, 120 undergraduates tested for the predicted after-effects. The size of the aftereffect increased monotonically with the amount of apparent weight difference. Results show that an apparent weight difference between 2 stimuli can determine subsequent experiences of heaviness and the aftereffects are not primarily due to peripheral processes. (16 ref.)—*Journal abstract*.

9196. Magnussen, Svein. (U. Oslo, Inst. of Psychology, Norway) **Reversibility of perspective in normal and stabilized viewing.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 153-156.—Examined the role of eye movements in the illusion of reversible perspective by testing the eye movement hypothesis that reversals are caused by specific changes of fixation. 5 graduate students observed a reversible-perspective figure during normal and stabilized viewing conditions. No difference in reversal rate was found between the 2 conditions. It is concluded that reversibility of perspective remains unaffected by the presence or absence of eye movements. (15 ref.)—*Journal abstract*.

9197. Pollack, Robert H. (U. Georgia) **Mueller-Lyer illusion: Effect of age, lightness contrast, and hue.** *Science*, 1970(Oct), Vol. 170(3953), 93-95.—Presented Müller-Lyer figures produced by lightness contrast (white on black) and by hue contrast in the absence of lightness contrast (red, yellow, green, or blue on gray) to 20 3rd-8th graders and 10 female undergraduates. Contrary to Piagetian expectations, the illusion magnitudes resulting from the colored figures did not decline with age.—*Journal abstract*.

9198. Restle, Frank. (Indiana U.) **Instructions and the magnitude of an illusion: Cognitive factors in the frame of reference.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 31-32.—28 undergraduates judged the length of a horizontal line having vertical lines at the ends and a vertical line crossing at the middle. As has often been shown, judgments of the horizontal line varied inversely with the length of the vertical segments. 1 group of Ss (N = 12) was told to use the end lines as frame of reference and ignore the center line, and the estimated weights of end and center line were .22 and .02. The other group (N = 17) was told to ignore the end lines and use the center line as frame of reference. The weights of end and center line for this group were .06 and .22. It is concluded that the Helson adaptation level equations are valid, but that the weights of parts of the field are partly under voluntary control and are not simply a function of the visual field.—*Journal abstract*.

9199. Weintraub, Daniel J. & Virsu, Veijo. (U. Michigan) **The misperception of angles: Estimating the vertex of converging line segments.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 5-8.—Estimates of the point of intersection of converging line segments depended upon the angle between lines and the orientation of the display. Undergraduates served as Os in 2 experiments. The main conclusion is that the tilt of a line is perceptually altered to appear more nearly parallel to the more closely aligned axis, either horizontal or vertical, of an O's visual field.—*Journal abstract*.

Time

9200. Brehmer, Berndt. (U. Umeå, Sweden) **Note on the effect of velocity on perceived duration.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 157-160.—Presents an experiment which manipulates the independent variable of velocity by a variation in the velocity of a moving S traveling through a stationary stimulus situation. 10 undergraduates made magnitude productions of duration in 2 velocity conditions when traveling in a car. Productions for the higher of the 2 velocities were reliably longer than those for the lower ($p < .05$), due to a negative relation between velocity and the slope of the response-stimulus (R-S) function relating perceived to physical duration. It is suggested that the effect of velocity on the slope of the R-S function may account for the discrepant results from previous studies investigating the effects of velocity on perceived duration.—*Journal abstract*.

9201. Hoyer, William J. & Jones, Elvis C. (West Virginia U.) **Effects of knowledge of the ITI on time estimates: Method of production.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 709-710.—*Journal abstract*.

VISION

9202. Guth, Sylvester K. **Lighting for visual performance and visual comfort.** *Journal of the American Optometric Association*, 1970(Jan), Vol. 41(1), 63-71.—Presents a brief review of previous research in seeing and indicates how the results are applied. Lighting recommendations are made in consideration of the factors, e.g., optimal visibility, visual performance, ease of seeing, and comfort.—*M. West*.

9203. Lack, Leon C. (U. Adelaide, South Australia) **Effects of knowledge of results and spacing of**

practice trials in training of control of binocular rivalry. *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 827-830.—Investigated the effects of knowledge of results (KR) and compared its effects with spacing of practice. 60 undergraduates in 4 experimental groups practiced, under binocular rivalry, control instructions of "slow rate" and "rapid rate" for a total of 2 min. each on 10 successive test sessions. The effects of distribution of practice and knowledge of results (KR) on the increase of control of binocular rivalry were investigated using a 2×2 factorial design. All experimental groups except the massed practice group with no KR showed significant decreases of slow rate, increases of rapid rate, and, consequently, significant increases of control of binocular rivalry. The increase of such control with practice was facilitated significantly by spacing but was most dramatically affected by KR. Results indicate that both KR and the distribution of practice are significant independent variables which seem to be additive in their effects.—*Journal abstract.*

9204. Marks, Lawrence E. (John B. Pierce Foundation Lab. New Haven, Conn.) **Brightness and retinal locus: Effects of target size and spectral composition.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 26-30.—Ss gave numerical estimates of brightness for stimuli presented to the foveal and peripheral retina. Exp. I with 12 male Ss showed that the periphery's superior sensitivity to white light is relatively independent of target size. Exp. II with the same Ss showed that the periphery is more sensitive than the fovea to violet light, but is less sensitive than the fovea to red light. Results are explicable in terms of differences between rod and cone mediation of brightness. (17 ref.)—*Journal abstract.*

9205. Purcell, Dean G. & Stewart, Alan L. (New School for Social Research) **The two-flash threshold: An evaluation of critical-duration and visual-persistence hypotheses.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 61-64.—The 2-flash threshold is reduced by increasing the duration of both pulses of light or light adapting the eye. Increasing the duration of the 1st pulse also decreases the 2-flash threshold, contrary to what a critical-duration explanation of the threshold would predict. Decreasing the duration of the 2nd pulse increases the threshold when the 2nd pulse is very brief. Light adapting the eye under such conditions serves to increase the 2-flash threshold, unlike the effect adaptation has when a long 2nd pulse is used. 4 experiments were conducted using 6, 5, 5, and 6 O's, respectively. (22 ref.)—*Journal abstract.*

9206. Uetsuki, Toshio & Ikeda, Mitsuo. (Minolta Camera Research Lab., Sakai, Japan) **Study of temporal visual response by the summation index.** *Journal of the Optical Society of America*, 1970(Mar), Vol. 60(3), 377-381.—Obtained psychophysically from 2 male Ss the summation index for double flashes as a function of interflash interval t for 5 different adapting levels. Clear inhibition was found at about $t=50$ and at $t=70$ msec. for the 2 brightest adapting fields. Inhibition was also observed at very large intervals, including $t=300$ msec. To explain the curve, a temporal response with a positive component and a negative component (type-B response) was hypothesized for the human visual system, whose physiological correlates are discussed. For relatively low adapting levels, including dark adaptation, the summation-index curves showed a somewhat different shape. They did not show strong inhibition, but rather

weak and long-continued inhibition, ranging from about $t=100-300$ msec. Therefore, the temporal response for those conditions may be composed of a small but long-continued negative component (type-A response). The transfer from type-A response to type-B response is rather abrupt; it occurs at the adapting level where the increment threshold begins to increase from the value that corresponds to the absolute threshold. (15 ref.)—*Journal abstract.*

Perception

9207. Kanizsa, Gaetano & Vicario, Giovanni. (U. Trieste, Italy) **La perception de la réaction intentionnelle.** [The perception of intended reaction.] *Bulletin de Psychologie*, 1969-1970, Vol. 23(17-19), 1010-1039.—Utilizing formats similar to those of Heider and Simmel, Michotte and Minguzzi a series of experiments were designed to determine the effects of time factors, spatial separation, velocity, distance traveled, line of travel, polarity, and various other conditions upon the perception of reactive movement, i.e., the perception of geometric figures animated on film as running away, releasing, advancing, withdrawing, pursuing, etc. The conditions influencing the perception of reactive movement are classified into 4 categories: spatial conditions, temporal factors, kinetic conditions, and figure and field conditions. Perception of reactive movement was greatest with a stimulus separation of 20-35 mm. and did not occur when separation reached 80 mm. Perception was most clear-cut when the distance traveled by 1 stimulus was 3 or 6 cm. and that of the other 3 cm. A broad range of time intervals (-400 to +960 msec.) between the arrival and departure of 2 mobile stimuli were successful in evoking reactive movement. A relationship approximating 1:9 between the velocities of 2 mobile stimuli appeared optimum although a broad range of velocity ratios was effective. Perceptions of "release," "advance and retreat," and "moving apart" were not only highly dependent upon line of travel and polarity of the stimuli but upon the attentiveness of the S. Relative size, form, color, expansion, or contraction of the mobile stimuli did not appear in these instances to influence the perception of reactive movement.—R. E. Smith.

9208. Lie, Ivar. (U. Oslo, Inst. of Psychology, Norway) **Achromatic colour constancy: A re-examination of its empirical basis and functional significance.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 146-152.—Examines the empirical basis of the assumed color-albedo relation, as well as the validity and psychophysical basis of illumination perception in a review of the literature. The traditional conception of achromatic color constancy, defined in terms of a psychophysical color-albedo relation, is found to be unfruitful from a functional and theoretical point of view. An alternative definition of color constancy in terms of the validity of perception of illumination is suggested. (30 ref.)—*Journal abstract.*

9209. Matthews, M. L. (U. Guelph, Ontario, Canada) **Spatial and temporal factors in masking by edges and disks.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 15-22.—Increment threshold of a small test probe was found to be elevated by backgrounds of a disk, bar, or luminance step. The spatial parameters that produce maximum masking were found to be essentially similar with the 3 types of background. The time course of masking was also found to be similar for the disk and

bar background. It is suggested that a fundamentally similar type of visual processing underlies each of the masking situations. (23 ref.)—*Journal abstract.*

9210. Pantle, Allan. (U. California, Los Angeles) **Adaptation to pattern spatial frequency: Effects on visual movement sensitivity in humans.** *Journal of the Optical Society of America*, 1970(Aug), Vol. 60(8), 1120-1124.—Measured human luminance thresholds using a square-wave test grating (spatial frequency = .38 cycles/deg) moving at different speeds (from 0°-22°/sec). A set of gratings of various spatial frequencies ranging from 0 (uniform field) through 23 cycles/deg provided different adapting patterns that were viewed prior to threshold determinations by 3 Os with normal vision. The pattern of threshold elevations produced by the set of adapting gratings was different for different test-grating speeds. Results indicate that visual mechanisms with different spatial-frequency-tuning characteristics mediate the detection of a low-frequency grating when it is moved at different speeds. Results also suggest that the higher-harmonic components of a low-frequency grating contribute to its detection when it is moved at slow speeds. (18 ref.)—*Journal abstract.*

9212. Sadler, Timothy G. & Mefferd, Roy B. (Veterans Administration Hosp., Psychiatric & Psychosomatic Research Lab., Houston, Tex.) **Fluctuations of perceptual organization and orientation: Stochastic (random) or steady state (satiation)?** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 739-749.—Obtained intrareversal times, using flat drawings, for 2 kinds of fluctuations: (a) perspective reversals in a figure eliciting apparent depth, and (b) reversals of lateral organization in a figure not eliciting apparent depth. Ss were 40 undergraduates and 21 firemen, respectively. The durations of the alternate percepts (P1 and P2) between reversals early in a viewing session were compared with recently published data of the same type. In the latter study, P1 was of longer duration than P2, both with a flat drawing and a rotating skeletal cube, which were explained in terms of satiation theory. In the present study no significant differences were found between P1 and P2 with 2 different groups of Os and with 2 figures. Explanations for these differences in results are advanced. The use of grouped percept-duration data to support steady state (e.g. satiation) theories of perceptual fluctuation phenomena is criticized. (39 ref.)—*Journal abstract.*

9213. Stone, George C. (Langley Porter Neuropsychiatric Inst., San Francisco, Calif.) **Response latencies in visual search involving redundant or irrelevant information.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 9-14.—Considered 3 properties of models for comparison of multiattribute visual stimuli: parallel vs. serial processing, efficient vs. exhaustive comparisons, and biased vs. unbiased acceptance of attributes for processing. Ss performed 2 comparison tasks, matching-to-sample and identification of odd stimuli, with color and form attributes presented singly and in redundant and nonredundant pairings. Analyses of means and of total distributions of response latencies support the conclusion that parallel and efficient comparisons were the rule, along with a kind of partial selection of attribute to be processed. Ss differed

in their relative speed of processing form and color attributes, and these differences accounted for most, but not all, of the differences among them in processing multiattribute stimuli. Ss were 3 males and 3 females, 9-76 yr. old.—*Journal abstract.*

9214. Townsend, J. T. (Purdue U.) **Theoretical analysis of an alphabet confusion matrix.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 40-50.—Attempted to acquire a confusion matrix of the entire upper-case English alphabet with a simple nonserified font under tachistoscopic conditions. This was accomplished with 2 experimental conditions, 1 with blank poststimulus field and 1 with noisy poststimulus field, for 6 Ss in 650 trials each. Results were: (a) the finite-state model that assumed stimulus similarity (the overlap activation model) and the choice model predicted the confusion-matrix entries about equally well in terms of a sum-of-squared deviations criterion and better than the all-or-none activation model, which assumed only a perfect perception or random-guessing state following a stimulus presentation; (b) the parts of the confusion matrix that fit best varied with the particular model, and this finding was related to the models; (c) the best scaling result in terms of a goodness-of-fit measure was obtained with the blank poststimulus field condition, with a technique allowing different distances for tied similarity values, and with the Euclidean as opposed to the city-block metric; and (d) there was agreement among the models in terms of the way in which the models reflected sensory and response bias structure in the data, and in the way in which a single model measured these attributes across experimental conditions, as well as agreement among similarity and distance measures with physical similarity. (24 ref.)—*Journal abstract.*

Size & Distance & Depth Perception

9215. Gärling, Tommy. (U. Stockholm, Psychological Lab., Sweden) **Studies in visual perception of architectural spaces and rooms: IV. The relation of judged depth to judged size of space under different viewing conditions.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 133-145.—Hypothesized that perceived size of space depends on perceived depth. Judgments of depth and size of space were obtained in 4 experiments by the magnitude estimation method under (a) binocular viewing of actual spaces, (b) monocular viewing of color photographs, (c) monocular viewing of detailed drawings, and (d) monocular viewing of undetailed drawings. Os were 48 undergraduates. Judged depth and size were found to be power functions of the physical measures. The exponents decreased successively under conditions a-d. Results support the hypothesis.—*Journal abstract.*

Color Vision

9216. Burnham, R. W., Onley, J. W., & Witzel, R. F. (Eastman Kodak Co., Research Lab., Rochester, N.Y.) **Exploratory investigation of perceptual color scaling.** *Journal of the Optical Society of America*, 1970(Oct), Vol. 60(10), 1410-1420.—Used a viewing situation of moderate complexity. 2 groups of color samples were used, 1 with constant hue and 1 with varied hue. Ratio judgments of color difference were obtained by having 7 Os set the physical distance between pairs of color samples to represent the ratio of the size of visual differences relative to a standard difference created by

setting 2 other color samples a fixed distance apart. The scaled color judgments were subjected to the R. N. Shepard-J. B. Kruskal nonmetric technique of multi-dimensional analysis. A comparison was made between the nonmetric analysis and more-conventional metric analyses where comparable scaling results were obtained. The outcome of this comparison was that with a nonmetric technique, and with an intrinsically imprecise scaling technique, meaningful metric visual-scaling information became available. Good agreement was found with Munsell scales and with I. H. Godlove and D. L. MacAdam predictions of visual distance. (16 ref.)—*Journal abstract.*

9217. Lederberg, Victoria. (Rhode Island Coll.) **Color recognition during voluntary saccades.** *Journal of the Optical Society of America*, 1970(Jun), Vol. 60(6), 835-842.—Measured color recognition during voluntary eye movements by presenting various luminances of red, blue, or green test flashes superimposed on a white adaptation field to 3 undergraduates. A 3- μ sec test flash was delivered at various times before, during, or after a saccadic eye movement, recorded on film by use of ultraviolet light reflected from the cornea. Color recognition was found to be best when the flash was presented during steady fixation, somewhat poorer just before a saccade, and still poorer just after a saccade. The poorest recognition of red and green test flashes occurred when the flash arrived precisely in the middle of a saccade; with blue stimuli, the maximum inhibition occurred when the flash arrived 40-80 msec. later. Recognition of colors was not impaired during a control procedure in which the S moved his hand to trigger the stimulus flash during steady fixation. It is concluded that a specific visual suppression accompanies eye movements but not other motor activities that might equally well divert attention from the visual task.—*Journal abstract.*

9218. Miller, Sheldon. (U. Michigan, Biophysics Research Div.) **Psychophysical spectral-sensitivity measurements and color-matching data.** *Journal of the Optical Society of America*, 1970(Oct), Vol. 60(10), 1404-1406.—Reports the consistency between psychophysical spectral-sensitivity measurements and color-matching data. The 2-color-threshold technique allowed the derivation of 3 spectral-sensitivity curves, which were used to generate a color space. This space was consistent (except for $\lambda > 650$ nm.) with the color-matching data of 3 normal-color-vision Os. (22 ref.)—*Journal abstract.*

Form & Pattern Discrimination

9219. Smith, Nathaniel C. (Ohio State U.) **Peripheral recognition thresholds for digits.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 732.—Compared peripheral viewing and foveal blurring in 4 Ss. Results indicate that "S can map a visual form field, differences lie in the extent of the boundaries of the field in each meridian, the extent of the inferior meridian is greater than the superior, form does not play a significant role, there is no significant relationship between foveal and peripheral recognition thresholds under the conditions of this study, and there is no significant relationship between the recognition thresholds and the free-recall value of the digits."—S. Knapp.

Eye Movement

9220. Graham, Kenneth R. (Stanford U.) **Eye movements during waking imagery and hypnotic hallucinations.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3887-3888.

9221. McFarland, William H. & Weber, Bruce A. (Southern Illinois U.) **An investigation of ocular response to various forms of sound field auditory stimulation.** *Journal of Auditory Research*, 1969(Jul), Vol. 9(3), 236-239.—3 different methods of sound field auditory stimulation were presented to 12 normal-hearing young adults (a stationary white noise, a white noise that alternated from side to side, and a rotating white noise). Only the rotating sound stimulus condition created changes in eye movements significantly different from those observed in controls. The highly variable form of the response, the high rate of spontaneous responses and the amount of time necessary to judge the records make this technique appear clinically unfeasible.—*Journal summary.*

Brightness & Contrast Discrimination

9222. Forbes, T. W., Pain, R. F., Bloomquist, D. W., & Vanosdall, F. E. (Michigan State U., Highway Traffic Safety Center) **Low contrast and standard visual acuity under mesopic and photopic illumination.** *Journal of Safety Research*, 1969(Mar), Vol. 1(1), 5-12.—Presents a study to obtain normative data using the Allen Night Visibility Performance Tester and the Titmus Visual Acuity Tester under low illumination (mesopic) and ordinary room illumination (photopic) testing conditions. Scores were obtained for 202 male and 194 female 15-60 yr. old Ss. Results indicate the standard decrease in visual acuity with increased age in all 4 tests. The Allen test (50-60% contrast) showed no greater loss in average scores than did the Titmus test (90% contrast) under mesopic conditions. The night visibility performance test scores correlated highly with each other (.84) and correlated about .50 with each of the normal acuity Titmus scores. Analysis of the poorest 20% of scores on each test showed that 46-78% were the same Ss. The question is raised whether 50% rather than the specified 10-20% contrast may not be more nearly what is met in night driving. In this case, results indicate a visual disadvantage in night driving by some Ss in all age groups. It is concluded that this type of test information is probably of more value for advising drivers with difficulties than for licensing procedures.—*Journal abstract.*

9223. Matteson, Halsey H. (Tulane U.) **Effects of surround luminance on perceptual latency.** *Journal of the Optical Society of America*, 1970(Aug), Vol. 60(8), 1125-1131.—Adjusted test-field luminance, in Exp. 1, to match the brightness of a reference stimulus. Over a wide range of surround luminance, latency was measured by comparing test-stimulus and surround-field onsets, using the perceived-order method, in which the temporal interval between the 2 stimuli is varied to obtain subjective simultaneity. Os were 2 males with normal vision. A series of control observations was made using test stimuli covering the same range of test-stimulus luminance used in the main series of observations, but with no surround field. Latencies of test stimuli were considerably shorter with high-luminance surround

fields than with no surround. Apparently, high-luminance surrounds resulted in reduction of latency of response to the test stimulus (facilitation of response to the test stimulus). In Exp. II, a constant test-stimulus luminance was used. Reduction of latency of response to the test stimulus increased with increasing surround luminance when surround luminance exceeded test-stimulus luminance. Supplementary observations indicate that the reduction of test-stimulus latency was not an artifact of dark adaptation. (34 ref.)—*Journal abstract*.

9224. Nachmias, Jacob & Kocher, Elizabeth C. (U. Pennsylvania) **Visual detection and discrimination of luminance increments.** *Journal of the Optical Society of America*, 1970(Mar), Vol. 60(3), 382-389.—Employed a rating-scale psychophysical method to obtain from 12 Os receiver operating characteristics for detection and discrimination of luminance increments. These curves were used to estimate the parameters of a normal probability-density function which was assumed to describe the relevant internal effects of the test flash. The over-all results strongly indicate that the mean of this distribution is a positively accelerated function of luminance of the test flash, and suggest that the standard deviation is a nonmonotonic function of luminance. It is argued that quantum and criterion fluctuations cannot account for these findings, whereas channel uncertainty may be at the root of some of them. (26 ref.)—*Journal abstract*.

9225. Weisstein, Naomi; Jurkens, Thomas, & Onderlin, Therese. (Loyola U., Chicago, Ill.) **Effect of forced-choice vs magnitude-estimation measures on the waveform of metacontrast functions.** *Journal of the Optical Society of America*, 1970(Jul), Vol. 60(7), 978-980.—Obtained metacontrast functions for 3 Ss using forced-choice and magnitude-estimation response measures, and for a 4th S using forced choice alone. The functions from these 2 measures were in every case U shaped and did not differ significantly from each other, even though the stimuli used for each measure differed slightly, and the forced-choice study was done 3 mo. after the magnitude-estimation study. Thus, U-shaped metacontrast functions are not artifacts of subjective response criteria. The relative merits of the subjective and objective response indicators as measures of metacontrast are discussed.—*Journal abstract*.

AUDITION

9226. Alexeenko, N. Y. (USSR Academy of Sciences, Inst. of Higher Nervous Activity & Neurophysiology, Moscow) **Directional hearing: Effect of unilateral change of the sound duration.** *Science*, 1970(Feb), Vol. 167(3920), 1009-1010.—In experiments with 12 human Ss monaural change of the duration of a binaural acoustic stimulus within the range of .5-1.5 msec. caused a considerable shift of the sound image. This could be counterbalanced by a unilateral change of the signal intensity. Further unilateral lengthening of the stimulus did not affect the sound localization, but revealed a masking aftereffect (4-10 msec.) of the binaural signal. Data define the temporal characteristics of binaural effect formation and the relative importance of duration and intensity parameters at different stages of binaural interaction.—*Journal abstract*.

9227. Hafter, Ervin V. & Carrier, Samuel C. (U. California, Berkeley) **Masking-level differences obtained with a pulsed tonal masker.** *Journal of the*

Acoustical Society of America, 1970(Apr), Vol. 47(4, Pt. 2), 1041-1047.—Obtained masking-level differences (MLDs) for the binaural condition NOSp with pulsed tonal signals masked by pulsed tones of the same frequency and duration. MLDs were measured in 2 male undergraduates and 1 of the co-authors, relative to the condition NOSO. Frequencies tested were 250, 500, and 1000 Hz.; the duration was 125 msec. Detection was measured with 4 values of the signal-to-masker phase, which for NOSp produced: (a) an interaural difference of time (Δt), (b) an interaural difference of intensity (ΔI), (c) Δt and ΔI both favoring the same ear (consonance), or (d) Δt and ΔI favoring opposite ears (dissonance). The magnitudes of the MLDs were largest for conditions of Δt alone, next largest for consonance, and least for dissonance and ΔI alone. The MLDs were positive in sign, in contrast to the negative MLDs that have previously been reported for similar stimuli. Data are shown to fit a lateralization model in which differential time-intensity trading occurs for consonance and dissonance. (18 ref.)—*Journal abstract*.

9228. Hatfield, Jimmy L. & Soderquist, David R. (U.S. Army Medical Research Lab., Ft. Knox, Ky.) **Practice effects and signal detection indices in an auditory vigilance task.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1458-1463.—Investigated the performance of 9 male volunteers over 10 90-min vigilance sessions. Trends in performance over and within sessions were examined in terms of 3 dependent measures: (a) correct detections, (b) errors of commission, and (c) theory of signal detectability (TSD) indices (d' and β). Results indicate that (a) TSD accounts for performance over sessions but is inadequate in accounting for within-sessions decrements unless basic tenets of the theory are altered; (b) performance decreases within sessions for the 1st 30 min. regardless of practice; and (c) within-sessions decrements may be accounted for by assuming either a decrease in the O's activation level, a distracted mode of observing, or both. (21 ref.)—*Journal abstract*.

9229. Miller, Harold. (U. Waterloo, Ontario, Canada) **The FROC curve: A representation of the observer's performance for the method of free response.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1473-1476.—Discusses the use of the receiver-operating characteristic (ROC) curve in representing the O's performance in a yes-no signal detection task. In a free-response task, a ROC curve cannot be plotted because the observation interval is not defined. If the responses can be partitioned into hits and false alarms, then O's performance can be represented by a FROC curve, which possesses many of the properties of a ROC curve. FROC curves were obtained from 1 undergraduate in a vigilance task to demonstrate its use.—*Journal abstract*.

9230. Schubert, Earl D. & West, Roger A. (Stanford U.) **Recognition of repeated patterns: A study of short-term auditory storage.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1493-1501.—Explored the parameters of waveform that enable listeners to recognize repetition of patterns within a signal using 4 types of waveform: random-amplitude constant-period, constant-amplitude random-period, random-amplitude random-period cophasic, and random-amplitude random-period antiphase. The number of repetitions/signal required to differentiate signals containing repetitions from random waveforms that did

not contain repetitions was the measure of comparison. It is concluded from 3 experiments with 4 Ss that (a) signals with 0-crossing information (random period) and signals of medium sensation level appear best for recognition of the repetition of patterns, (b) high-frequency information is more useful than low to the auditory system in identifying the repetitions within signals, and (c) no evidence of any difference in rate of learning to recognize patterns was found for the different types of waveform. (17 ref.)—*Journal abstract.*

Perception

9231. Durlach, N. I. & Braida, L. D. (Massachusetts Inst. of Technology, Research Lab. of Electronics) **Intensity perception: I. Preliminary theory of intensity resolution.** *Journal of the Acoustical Society of America*, 1969(Aug), Vol. 46(2, Pt. 2), 372-383.—Attempts to develop a quantitative theory of intensity resolution applicable to a wide variety of experiments on discrimination, identification, and scaling. The theory is composed of a Thurstonian decision model, which separates sensitivity from response bias, and an internal-noise model, which separates sensory limitations from memory limitations. It is assumed that the S has 2 memory operating modes, a sensory-trace mode and context-coding mode, and that the use of these 2 modes is determined by the characteristics of the experiment. In 1-interval paradigms, it is assumed that the context-coding mode is used, and the theory relates resolution to the total range of intensities in the stimulus set. In 2-interval paradigms, it is assumed that the 2 modes are combined, and the theory relates resolution to both the total intensity range and the duration between the 2 intervals. The theory provides, among other things, a new interpretation of the 7 ± 2 phenomenon. (22 ref.)—*Journal abstract.*

9232. Guiot, J. M. (Butler U.) **Temporary threshold shifts following pulsed monaural and alternate binaural exposure.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1449-1451.—Compared the temporary threshold shifts (TTS) produced by exposure to pulsed monaural and alternate binaural high-intensity stimuli (105-db sensation level, 1 kHz.) in 7 21-37 yr. old volunteers. All Ss showed greater TTS for monaural exposures than for binaural, except in 3 cases out of 21 (6 experimental conduction). However, monaural and binaural TTS were found to be significantly different (.01 level) in only 1 instance of the 3 paired conditions.—*Journal abstract.*

9233. Hafter, Ervin R., Bourbon, Walter T., Blocker, Anne S., & Tucker, Ann. (U. California, Berkeley) **A direct comparison between lateralization and detection under conditions of antiphase masking.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1452-1457.—Instructed 4 Ss (2 of the authors and 2 naive Ss) to indicate the lateral displacement of signals presented at 5 levels of signal-to-noise ratio. Signals were 500-Hz 100-msec bursts of tone heard in a wide-band noise mask. A likelihood ratio analysis of lateralization data allowed a direct comparison between detection based on lateralized differences and detection obtained in a standard 2-interval forced-choice detection experiment. It was found that the measure of detection based on lateralization is nearly the same as that actually obtained in the conventional detection experiment. (17 ref.)—*Journal abstract.*

9234. Hershkowitz, R. M. & Durlach, N. I. (Massachusetts Inst. of Technology, Research Lab. of Electronics) **Interaural time and amplitude jnds for a 500-Hz tone.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1464-1467.—Performed preliminary experiments on the discrimination of interaural time and amplitude for lateralization images both on and off the midline, using a common set of 4 experienced Ss, with normal audiograms, and a common experimental configuration. Results are compared with previous work on interaural discrimination and time-intensity trading and with the prediction of the equalization and cancellation model relating interaural time to interaural amplitude discrimination.—*Journal abstract.*

9235. Lawson, Robert F. (Wayne State U.) **Scientific approaches to problems of aural perceptivity in music.** *Michigan Academician*, 1970(Sum), Vol. 3(1), 7-18.—Deals with the problems and interrelated remedial approaches for individuals possessing low aural-response sensitivity, where aural perceptivity is defined as an ability encompassing the following areas: (a) recognition and discrimination of pitch, (b) tonal organization, (c) rhythm, (d) harmonic content, (e) timbre, (f) sight-sound recognition, and (g) vocal reproduction. 1st, the factors responsible for high- or low-aural perceptivity are analyzed. These factors, e.g., memory retention and amount of information similar to the stimulus previously stored in the memory, are then related to the above parameters. Finally, what is necessary to increase the aural perceptivity of individuals with difficulties in this area is indicated.—S. R. Diamond.

9236. Luterman, Barry F. & Karlovich, Raymond S. (U. Wisconsin) **Further observations concerned with auditory fatigue during vocal and nonvocal speech activities.** *Journal of the Acoustical Society of America*, 1969(Aug), Vol. 46(2, Pt. 2), 403-408.—Exposed 11 female Ss with normal hearing sensitivity to 90-db sensation levels (SLs) 2000 and 4000 Hz. fatigue stimuli for 3 min.; temporary threshold shifts (TTSs) were measured $\frac{1}{2}$ octave above the fatigue frequency. Over several experimental sessions separated by at least 24 hr., each S performed each of the following tasks during the exposure time for each fatigue frequency: reading a passage aloud (RA); reading a passage silently (RS); reading a passage silently while articulating the words without voicing or whispering (RSA); and reverie which involved no reading (REV). The RA task produced significantly greater TTS than the other task conditions when the fatigue frequency was 4000 Hz., implying that transmission of the fatigue stimulus was enhanced, perhaps owing to impedance changes resulting from contraction of the middle-ear muscles during speech production. The RA-task condition produced consistently, but not significantly, less TTS than the other task conditions when the fatigue stimulus was 200 Hz., which might indicate that transmission of the fatigue stimulus was being slightly attenuated during speech production. Data are discussed in terms of a hypothesis indicating that speech production alters the impedance of the auditory system, hence altering the transmission of sound. A TTS paradigm incorporating speech activities may be an indirect but useful method for assessing the sound transmission properties of the human auditory system. (15 ref.)—*Journal abstract.*

9237. Moray, Neville. (U. Sheffield, England) **Introductory experiments in auditory time sharing: De-**

tection of intensity and frequency increments. *Journal of the Acoustical Society of America*, 1970(Apr), Vol. 47(4, Pt. 2), 1071-1073.—Reports 2 preliminary experiments with 5 Ss in a program to investigate the psychophysics of auditory attention. Ss were required to detect changes in intensity and frequency in pure-tone bursts of 100-msec duration under 4 conditions of attention, including undivided and divided attention. In the divided attention conditions, there was a lowering of the proportion of targets detected, particularly true when targets occurred simultaneously on 2 channels with both requiring a response. It is concluded that "attentional time-sharing factors clearly alter the detectability even of pure tones, although not to so great an extent as when verbal signals are used. . . ."—*Journal abstract.*

9238. Mulligan, B. E. & Elrod, M. (U. Georgia) **Monaural detection and filtering.** *Journal of the Acoustical Society of America*, 1970(Jun), Vol. 47(6, Pt. 2), 1548-1556.—Examined parametrically monaural detection of sinusoidal signals in noise with an interest in extending earlier work on prediction by B. E. Mulligan and M. Elrod. The amplitude model is found to be compatible with empirical psychometric functions, human receiver operating characteristics, and the results of a narrow-band-noise experiment. Through an interpretation of the amplitude model in terms of filter bandwidth, an attempt is made to understand further the process of auditory filtering. Bandwidth is shown to vary as a function of both signal frequency and signal-to-noise (S/N) ratio. At very low S/N ratios, maximal tuning occurs in the region of 2200-2300 Hz. At higher S/N ratios, tuning improves as a function of frequency. To facilitate prediction, a table is provided. (39 ref.)—*Journal abstract.*

9239. Perrott, David R. & Nelson, Michael A. (California State Coll., Los Angeles) **Limits for the detection of binaural beats.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1477-1481.—Investigated the probability of detecting binaural beats as a function of the frequency of the standard signal used and of the dichotic frequency difference using 7 22-26 yr. old naive and experienced listeners. The probability of beat detections was maximal at 500 Hz., and decreased as frequency increased up to 1500 Hz. No reliable pattern of beat detections was observed above 1500 Hz. Binaural beats were obtained with both fused and nonfused dichotically presented signals. Findings indicate that the upper frequency limit for the perception of binaural beats depends upon the dichotic frequency differences employed, the psychophysical procedure used, and the criteria for a beat threshold.—*Journal abstract.*

9240. Pollack, Irwin. (U. Michigan, Mental Health Research Inst.) **Discrimination of restrictions in sequentially-encoded auditory displays: Block designs.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 57-60.—Sequential constraints, in the form represented by equal frequencies within blocks, were imposed upon finite-state statistical generators. The sequences were encoded in the form of interval-coded pulse trains and were transduced to sound by earphones. In discrimination tests, interval thresholds between the finite states provided a measure of the relative discriminability between different sequential constraints. These thresholds are shown to be quantitatively related to the difference in uncertainty in specification of the sequences. To a 1st approximation: equal interstate

interval thresholds are associated with equal differences in uncertainty.—*Journal abstract.*

9241. Richards, Alan M. (U.S. Naval Submarine Medical Research Lab., Groton, Conn.) **Perception of pitch in a white-noise mask.** *Journal of the Acoustical Society of America*, 1969(May), Vol. 45(5), 1180-1185.—Obtained 3 mel scales, derived from fractionation data, and representing 3 differential noise conditions using 12 normal hearing adults. The no-noise function differed in no essential manner from the generally accepted mel scale advanced by S. S. Stevens (see PA, Vol. 14:5382). However, upon the introduction of a wide-band masker, the shape of the mel function became more positively accelerated. In general, when holding the intensity of the masker constant, this acceleration was inversely related to the sensation level of the experimental tones above masked threshold, and was not frequency dependent. Although this relationship is not dependent upon frequency per se, the magnitude of pitch shift increases with frequency.—*Journal abstract.*

9242. Skinner, Paul H. & Antinoro, Frank. (U. Arizona) **Perstimulatory tracking in pitch perception at different sensation levels.** *Journal of the Acoustical Society of America*, 1969(Aug), Vol. 46(2, Pt. 2), 426-430.—Tracked the pitch of a continuous fatiguing tone over time to study the effects of frequency and sensation level of the fatiguing stimulus on pitch perception. Ss were 3 male and 4 female undergraduates highly experienced in making pitch judgments. Perstimulatory tracking in pitch perception was done at the following frequencies: 500, 1500, 2500, and 4500 Hz.; and at the following sensation levels (SLs): 20, 40, 60, 90, and 100 db. The perstimulatory or continuous fatiguing signals were presented initially in the experiment for a duration of 3-8 min., depending on the frequency and intensity of the fatiguing stimulus. The pitch of the continuous tone was tracked constantly over that period. Immediately after cessation of the continuous tone, poststimulatory tracking was done at preexposure SLs of from 10-30 db. with pulsed tones alternating between ears. Perstimulatory pitch shifts were never apparent at the lowest frequency at any SL. Perstimulatory pitch shifts occurred commonly in the midfrequencies and were more prevalent at the higher SLs. Perstimulatory pitch shifts were observed at all of the experimental sessions at 4500 Hz. regardless of SL. The direction of temporary pitch shift (TPS) was apparently related to SL of the fatiguing signal. The amount of TPS was significant and increased with increasing frequency. Poststimulatory tracking revealed a very rapid recovery of TPS. (17 ref.)—*Journal abstract.*

9243. Taylor, M. M. & Forbes, S. M. (Defence Research Establishment, Toronto, Ontario, Canada) **Monaural detection with contralateral cue (MDCC): I. Better than energy detector performance by human observers.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1519-1526.—Investigated detection performance as a function of the amount of relevant information provided by the cue in a monaural detection with contralateral cue task using the 2 authors as Os. When the cue and signal were independently generated but identically timed and filtered, performance was indistinguishable from the no-cue control condition, and was like that of an inefficient energy detector using a filter matched to the signal bandwidth. When the cue was an identical replica of the signal, performance was much better than that of

an ideal energy detector and, for bandwidths less than 1600 Hz., approached that of an equally inefficient likelihood-ratio detector for signal known exactly. Efficiency was 25-30% in both cases. When the cue was derived from the signal, but passed through a wide-band 90° phase shifter, it provided an intermediate amount of information, and detection performance was also at an intermediate level. Results show that when relevant information is available to the detection mechanism, it can be used; and that the usual finding of energy-detector-like monaural performance is due to lack of more precise information about the signal at the detector. (20 ref.)—*Journal abstract.*

9244. Viemeister, N. F. (Indiana U.) **Intensity discrimination: Performance in three paradigms.** *Perception & Psychophysics*, 1970(Dec), Vol. 8(6), 417-419.—Compared performance in the following auditory intensity-discrimination paradigms: (a) 2IFC, (b) single-interval rating with an intensity cue preceding each observation interval, and (c) single-interval rating with no cue. Receiver-operating characteristic curves obtained in the single-interval conditions could be approximated by assuming that the underlying distributions were both normal and had equal variance. No large difference was observed between performance in the cue and the no-cue conditions. The normalized separation of the means for 2IFC was approximately twice the corresponding estimate for the single-interval conditions, i.e., $d_2 = 1.91d_1$. This is consistent with the hypothesis that the O in intensity-discrimination tasks bases decisions on the difference between the observed input and that of a noisy stored reference. The familiar result that $d_2 = (2)^{1/2} d_1$ can be predicted for simple detection.—*Journal abstract.*

9245. Weerts, Theodore C. & Thurlow, Willard R. (U. Wisconsin) **The effects of eye position and expectation on sound localization.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 35-39.—Ss who are exposed to a sound coming from straight ahead, but who turn their eyes 20° to the side toward a visible speaker during the exposure period and expect to hear the sound coming from the visible source, show a shift in localization of the sound up to a maximum of about 9°. Ss who only turn their eyes 20° to the side during the exposure period show a smaller but significant shift in sound localization, while Ss who do not turn their eyes, but are led to expect that the sound will appear to come from a visible loudspeaker 20° to the side, show no significant shift. Comparison of test results before and after the exposure period, with eyes directed straight ahead and no visible speaker present, shows the presence of a localization aftereffect for those experimental groups that showed a significant localization shift during the exposure period. Sounds are localized a few degrees to the side of their physical location in the same direction as the shift in localization during the exposure period. Ss in 2 sets of experiments were 80 and 50 undergraduates, respectively. Further experiments show that part, but not all, of the shift in localization during the exposure period can be understood in terms of a shift in perceived head direction. The localization aftereffects are shown not to be due to change in physical or perceived eye or head position.—*Journal abstract.*

9246. Zwislocki, J. J. (Syracuse U., Lab. of Sensory Communication) **Temporal summation of loudness: An analysis.** *Journal of the Acoustical Society of America*, 1969(Aug), Vol. 46(2, Pt. 2), 431-441.—Develops a

quantitative psychophysiological theory for loudness level and loudness as a function of stimulus duration. It is based on the psychophysical and neurophysiological evidence that the apparent temporal summation of acoustic energy is a result of neural summation at a high level of the auditory system. The theory shows how this can be achieved in spite of a nonlinear relationship between sound intensity and neural excitation. The temporal decay of neural firing preceding the final stage of temporal summation seems to be responsible for overcoming the nonlinearity. (38 ref.)—*Journal abstract.*

Speech Discrimination

9247. Berger, Kenneth W. (Kent State U., Speech & Hearing Clinic) **A speech discrimination task using multiple-choice key words in sentences.** *Journal of Auditory Research*, 1969(Jul), Vol. 9(3), 247-262.—Describes a new speech discrimination test using sentences, the Kent State University Speech Discrimination Test. The test consists of 5 phonetically similar key words within each sentence, any 1 of which will complete the sentence. The tester, however, reads only 1 of the key words and the S is to cross out on the printed answer sheet the key word which he believes he heard. 8 equal forms of the test were developed. Within each form there are 13 sentences, which from a discrimination standpoint become progressively more difficult. Scoring is based on the difficulty of the item. It is recommended that the examiner read the sentences in a conversational manner and peak the key words as near 0 on the volume unit meter as possible. This manner of reading the test sentences is designed to produce better monitored live voice testing comparisons from clinic to clinic.—*Journal summary.*

9248. Dirks, Donald D. & Bower, Deborah. (U. California, Medical School, Los Angeles) **Effect of forward and backward masking on speech intelligibility.** *Journal of the Acoustical Society of America*, 1970(Apr), Vol. 47(4, Pt. 2), 1003-1008.—Obtained monaural-intelligibility functions for monosyllabic words from 7 undergraduates with normal hearing under the following experimental conditions: (a) speech interrupted by silence at the rates of 1, 10, and 100 interruptions/sec (ips); (b) speech alternating noise (80-db SPL) at rates of 1, 10, and 100 ips; and (c) speech in interrupted noise (80-db SPL) at rates of 1, 10, and 100 ips. Results indicate that the effect of forward and backward masking on intelligibility was substantial at 10 ips and even more pronounced at 100 ips. However, at 1 ips little masking effect was observed except at very adverse signal-to-noise (S/N) ratios. Speech heard within the noise burst contributed to intelligibility at favorable S/N ratios when the noise was 1 ips. At 100 ips, the speech signal within the noise burst made only a small contribution to the total intelligibility score, and at 10 ips the function was formed almost entirely by the speech heard during the noise-free intervals.—*Journal abstract.*

9250. Thomas, I. B. (U. Massachusetts) **Perceived pitch of whispered vowels.** *Journal of the Acoustical Society of America*, 1969(Aug), Vol. 46(2, Pt. 2), 468-470.—Required 1 female and 2 male listeners to determine the pitch of the whispered vowels of a male

and a female speaker. Continuous tape loops of the vowels were played to the listeners who specified the perceived pitch by comparison with that of a pure-tone oscillator. Initially, the perceived pitch of each of the vowels corresponded very closely to F2 as measured from spectrograms. In subsequent tests in which the listeners were told to expect more than 1 pitch, 2 listeners identified additional pitches corresponding to F1 for certain vowels of both speakers. The accuracy and consistency of formant determination using this simple "listen-and-compare" method compare favorably with results obtainable from more complex analysis procedures.—*Journal abstract.*

9251. Tobias, Jerry V. (FAA, Civil Aeromedical Inst., Oklahoma City, Okla.) **Auditory processing for speech intelligibility improvement.** *FAA Office of Aviation Medicine Report*, 1970(Apr), No. 70-6, 7 p.—2 appropriately placed loudspeakers wired in opposite phase to each other but activated by the same signal source will improve speech intelligibility to an extent equivalent to a 5-db improvement in signal-to-noise ratio. (21 ref.)—*W. E. Collins.*

9252. Tsunoda, Tadanobu. (National Center of Speech & Hearing Disorders, Tokyo, Japan) **Contralateral shift of cerebral dominance for nonverbal sounds during speech perception.** *Journal of Auditory Research*, 1969(Jul), Vol. 9(3), 221-229.—Investigated the localization by normal-hearing adults of repetitive noise bursts in the vertical plane at 0° azimuth under monaural and binaural listening conditions, at 30- and 50-db sensation level. Noises were either unfiltered, 3.8 kcs low-pass, or 2.2-9 kcs band-rejected. Monaural listening was simulated by covering 1 ear with a muff giving a nominal 30-db attenuation. Accuracy of monaural localization was significantly inferior ($p < .01$). Attenuating the high-frequency components of the bursts always reduced performance ($p < .01$). It was speculated that a slight degree of asymmetry between ears might exist which could provide binaural spectral differences. When a listener is deprived of these cues in the monaural condition, the perceived spatial distinctiveness of the sound at a particular elevation is diminished, and localization judgments are less accurate.—*Journal summary.*

9253. Wingfield, Arthur & Klein, Jan F. (Brandeis U.) **Syntactic structure and acoustic pattern in speech perception.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 23-25.—The interaction of syntactic structure and acoustic pattern in perceptual segmentation of heard speech was investigated using sentences recorded with intonation patterns appropriate to their underlying structure and sentences where intonation was placed in direct conflict with the underlying structure. Speech samples were monitored through dichotic earphones with messages switched from 1 ear to the other either between or within major linguistic constituents. 30 undergraduates served as Ss. Analysis of errors in source localization and in sentence reproduction suggested a primary role of acoustic pattern in segmentation is to cue underlying syntactic structure. 2 subsidiary experiments provided evidence that observed effects were related to active perceptual processing of the speech signal.—*Journal abstract.*

Audiometry

9254. Ehmer, Richard H. & Ehmer, Barbara J. (U.

Bridgeport) **Frequency pattern of residual masking by pure tones measured on the Békésy audiometer.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1445-1448.—Obtained a Békésy audiogram for a 5-msec tone signal repeated 1/sec over the frequency range 100-10,000 Hz. Ss were 2 adults with audiometrically normal hearing. The audiogram was repeated with a 100-msec masking tone preceding the signal by 10 msec. The masking tones were presented at 20-100 db. sensation levels (SLs). Results show that 250 and 500 Hz. produce no masking at 20 db., but the greatest overall masking, without sharply defined maxima, occurs at higher SLs. Maskers of 1000, 2000, and 4000 Hz. produce masking at the 20-db level. At the low levels, there is a clear peak at the masking frequency; but as the masker level is raised, this peak begins to shift to increasingly higher frequencies, although it never reaches the 2nd harmonic.—*Journal abstract.*

9255. Fraser, Winifred D., Petty, Joseph W., & Elliott, Donald N. (Wayne State U., Auditory Research Lab.) **Adaptation: Central or peripheral?** *Journal of the Acoustical Society of America*, 1970(Apr), Vol. 47(4, Pt. 2), 1016-1021.—Measured adaptation using successive and simultaneous presentation of heterophonic stimuli to determine if adaptation is a central more than a peripheral phenomenon. Exp. 1, with 6 undergraduates, compared the method of delayed balance, method of simultaneous dichotic balances (SDB) involving tracking for 15-sec periods, and a modification of the SDB utilizing 1-sec tones. Only the homophonic SDB involving tracking produced noticeable adaptation. Exp. 11, with 3 undergraduates, studied several procedural variations of the heterophonic tracking SDB method. None of the variations produced the intensity decrement customarily associated with adaptation. It is concluded that, when binaural interactions (loudness and/or lateralization) are reduced or eliminated by test procedures, the adapted ear shows little if any shift. Decrements observed with the typical SDB procedure probably reflect slowly developing changes in binaural interactions—and, consequently, are central rather than peripheral changes. Judgments obtained with simultaneous stimulation, therefore, are not procedures that should be utilized for the study of peripheral adaptation effects.—*Journal abstract.*

9256. Harris, J. Donald. (U.S. Naval Submarine Medical Center, Groton, Conn.) **Efficient monaural procedure for the psychoacoustic calibration of earphones.** *Journal of the Acoustical Society of America*, 1970(Apr), Vol. 47(4, Pt. 2), 1048-1054.—Examined a new procedure for psychoacoustic calibration of earphones in which the air-conducted outputs of a standard and an unknown earphone were successively equated for loudness to a reference bone-conducted tone. 2 experiments were made with 20 graduate students. The problem to S was 1 of monaural loudness discrimination, with a relatively small variance, and involved only 4 sources of variance associated with coupling 2 earphones to the same ear, and 1 loudness discrimination judgment for each phone. The mean test-retest difference in the earphone transfer functions varied by 1.33-5.89 db. at different frequencies (midvalue = 3.36 db.). Only a few min. were required to complete S's observations at any frequency. Acceptable group means for transferring audiometric standards to an unknown earphone were obtained at any frequency by requiring as few as 9 Ss to make a single monaural loudness discrimination/ear-

phone by this technique. The mean test-retest difference in the earphone transfer functions by the traditional "ear-reversal" method varied by 4.16-7.54 db. at different frequencies (midvalue, 6.3 db.)—nearly twice that of the suggested procedure.—*Journal abstract.*

9257. Scharf, Bertram. (Northeastern U.) **Dichotic summation of loudness.** *Journal of the Acoustical Society of America*, 1969(May), Vol. 45(5), 1193-1205.—Measured overall and component loudness, cohesiveness (whether single or double) and location of the auditory image evoked by the dichotic complex in 5 undergraduates and the author. It was found that dichotic tone pairs were as loud as a binaural pair (same frequency to each ear), and both pairs were generally less than twice as loud as a component presented by itself. Overall loudness was invariant, even though at narrow frequency separations the components of a dichotic pair interfered with each other so that each component was softer when heard in the presence of the other than when heard by itself. At wide separations, where 2 distinct auditory images were reported, the loudness of a component was the same whether presented with or without the contralateral tone. It is concluded that the overall loudness of a pair of equally loud tones presented dichotically, a different frequency to each ear, is independent of the frequency separation between the 2 tones. (34 ref.)—*Journal abstract.*

9258. Young, I. M. (Jefferson Medical Coll., Philadelphia, Pa.) **Effects of pure-tone masking on low-pass- and high-pass-filtered noise.** *Journal of the Acoustical Society of America*, 1969(May), Vol. 45(5), 1206-1209.—Obtained threshold measurements for low-pass- and high-pass-filtered noises in the presence of pure tones in 3 trained listeners with normal hearing. High-pass-filtered noise with cutoff frequencies at 2400 Hz. and above yielded masking peaks near the cutoff frequencies. When noise was filtered with cutoff frequencies at 1200 Hz. and below, pure tones of 800 and 1000 Hz. had the greatest masking effect. For low-pass-filtered noise, as the bandwidth increased, masking peaks moved from low frequency to high. The masking effect was indistinguishable from that of white noise when filtered noise was cutoff at frequencies of 2400 Hz. and above. Results suggest that there is a definite mechanical resonant frequency effect on noise when the width of filtered noise exceeds a critical value. Masking effects are discussed in relation to mechanical resonant frequency and the interaction of difference and summation tones.—*Journal abstract.*

CHEMICAL SENSES

9259. Moskowitz, Howard R. (U. S. Army Natick Lab., Mass.) **Intensity scales for pure tastes and for taste mixtures.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 51-56.—Measured in 4 series of studies, taste intensities of sour, bitter, sweet, and salt by number matching (magnitude estimation), and by noise matching. The 2 procedures agreed in their estimates of the power-function exponent for each taste. Representative exponents obtained from the studies are 1-1.1 for sour and bitter and 1.3-1.5 for sweet and salt. In a 2nd set of studies each taste was judged against 3 or more background levels of a 2nd taste. Results suggest that the power-function exponent is unaffected when a 2nd taste is present in the solution. Whether the intercept changes

in taste mixtures was not determined in these experiments. (21 ref.)—*Journal abstract.*

SOMESTHESIA

9260. Blitz, Bernard & Dinnerstein, Albert J. (New York Medical Coll., N.Y.) **Role of attentional focus in pain perception: Manipulation of response to noxious stimulation by instructions.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 42-45.—Studied the effects of instructions on the pain induced by cold as a noxious stimulus in 18 male and 18 female paid volunteers. Pain threshold and quit point were obtained for 3 groups of Ss. Group I dissociated their experience of cold and pain, and focus on cold. Group II focused on cold and interpreted it as pleasant. Group III served as controls. Significant elevation in pain threshold (but not quit point) was found in both instruction groups. Males showed greater elevation in threshold than females in response to the instructions. Sex differences and response bias are discussed.—*Journal summary.*

9261. Dmitriev, A. S. **Labilintnye i ekstralabilintnye mekhanizmy nekotorykh somaticheskikh i vegetativnykh reaktsii na uskorenie.** [Labyrinthine and extralabyrinthine mechanisms of some somatic and autonomic reactions to acceleration.] Minsk, USSR: Nauka i Tekhnika, 1969. 252 p.—Presents original experimental data on the UCR and CR mechanisms of the labyrinthine and extralabyrinthine proprio-, intero-, and exteroceptive reactions of the striped and smooth musculature, which occur in man and animals when undergoing rotation and vertical displacement of the body. The features, characterizing the effects of acceleration on the activity of the higher divisions of the CNS, are described along with the involvement of labyrinthine and extralabyrinthine afferentation in these effects. Data are presented on (a) the efferent pathways and chain mechanism involved in the small intestinal vestibulomotor reaction to acceleration, and (b) the role of the humoral link (the catecholamines). The vestibular and visceral cutaneomuscular feather reflexes to rotation in birds are described.—I. D. London.

9263. Vierck, Charles J. & Jones, Marshall B. (U. Florida, Center for Neurobiological Sciences) **Influences of low and high frequency oscillation upon spatio-tactile resolution.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1431-1435.—Tested the assumption that the major prerequisites for accurate spatio-tactile localization are small receptive fields with minimal overlap. Psychophysical thresholds for 2-point and point localization were obtained from 2 male and 3 female Ss with the usual steady stimuli and with stimuli oscillating at 10 or 300 Hz. Receptive fields have been shown in other studies to be smaller for oscillating than for steady stimuli. It was found that both 10- and 300-Hz oscillations decreased 2-point thresholds but increased point-localization thresholds with reference to the control series using steady stimulation. A theoretical account of these results is given.—*Journal abstract.*

ENVIRONMENTAL EFFECTS

SLEEP & FATIGUE & DREAMS

9265. **Buscaino, G. A.** (U. Bari, Clinic for Mental & Nervous Illness, Italy) **Significato biologico del sonno con "MOR" ("REM-sleep")**: Importanza dei movimenti oculari rapidi per il determinismo del sogno pro-dipalmente visivo. [The biological significance of REM-sleep: The importance of rapid eye movements in the determinism of principally visual sleep.] *Acta Neurologica*, 1970(May), Vol. 25(3), 285-301.—Studied 2 questions of REM sleep: (a) Why do the eyes move with such rapidity? and (b) What significance does this type of sleep have? Of the 2 sleep phases which alternate in cycle, the REM phase is similar to the wakeful state and very rich mentation is present. REMs are involuntary. Ocular movements condition the onset and shape of the visual-motor components of dreaming. The appearance of the visual dream with moving images should be dependent upon the impulses reaching the cortical visual and paraviscual areas arising in the retina and in the proprioceptive receptors of ocular muscles activated by the REMs. REMs in newborns, and in congenital blind Ss support this interpretation. (English summary) (53 ref.)—*A. M. Farfaglia*.

9266. **Fisher, Jerome & Breger, Louis.** (Eds.) (Langley Porter Neuropsychiatric Inst., San Francisco, Calif.) **The meaning of dreams: Some insights from the laboratory.** *California Mental Health Research Symposium*, 1969, No. 3, 119 p.—Presents the aims, theoretical basis, and preliminary results of ongoing research by 4 psychologists into individual differences in dreaming and the function of dreams. Study I outlines research into the transformation of presleep experience in dreams and individual methods in 28 male Ss at both extremes of the field dependency scale, with special attention to change in the position of self and dream recall and repression. Study II after describing a series of experiments, hypothesizes that dreams have their own function apart from REM sleep. Results indicate that "dreaming is motivated by a need for experiences having a certain organizational quality of which completeness is an important aspect." Study III deals with the content and function of the dreams of 8 6-10 yr. old children, suggesting that dreams serve as mastery exercises in which creative solutions to present concerns may emerge. Study IV, with 15 Ss, describes experiments with an hallucinogenic agent (ditran) and REM deprivation. High drug responders were found to be more field dependent and most likely to be disrupted by REM deprivation. It is suggested that "the amount of REM time yet to occur at any point in the sleep cycle is dependent on the amount of dreaming or related fantasy which has preceded it."—*S. Knapp*.

9267. **Koulack, David.** (U. Manitoba, Winnipeg, Canada) **Effects of thirst on the sleep cycle.** *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 143-145.—Examined the effects of thirst on EEG-recorded sleep. 10 male graduates and undergraduates slept for 2 nonconsecutive nights in the laboratory. 1 night was preceded by 22 hr. of water deprivation and 1 by normal food and drink intake. Thirst reduced the total amount of time spent in REM periods, reduced the length of the 1st REM period, and increased the number of body movements throughout the night. Findings

suggest that some stimuli remain too potent to be handled adequately by the dream and that the potential conscious anxiety they create may be warded off by a reduction in REM dream time.—*Journal abstract*.

HYPNOSIS & SUGGESTIBILITY

9271. **Meeker, William B. & Barber, Theodore X.** (Medfield Foundation, Harding, Mass.) **Toward an explanation of stage hypnosis.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 61-70.—Explains stage hypnosis by 8 principles which do not utilize the concept of hypnotic state or trance. To produce an amazing performance, stage hypnotists rely primarily on (a) the high base rate of waking suggestibility, (b) a highly selective procedure for screening Ss, (c) the heightened suggestibility that is produced when the situation is defined to Ss as hypnosis, and (d) important social-psychological variables that are present in the stage situation. In addition, some stage hypnotists at times use (e) the "stage whispers" technique (in which Ss are told privately, in whispers, to help make the demonstration a success); (f) the "failure to challenge" technique, where the audience is misled; (g) trained Ss to carry out the difficult stunts, and (h) 1 or more tricks, e.g., pressure on the carotid baroreceptors which produces stupor. 9272. **Mordvinov, E. F. & Genkin, A. A.** **O vozmoshnostyakh prognozirovaniya vnushaemosti cheloveka po dannym spontannoï élektro-entselalogrammy.** [On the possibilities of predicting suggestibility in man through use of the data of the spontaneous electroencephalogram.] *Zhurnal Vyssheï Nervnoï Deyatel'nosti*, 1969(Nov), Vol. 19(6), 1027-1032.—39 18-30 yr. old Ss participated in a study of the possibility of a quantitative determination of suggestibility, when in a state of quiet wakefulness, through a consideration of 2 statistical parameters of the spontaneous EEG: average level of asymmetry of oscillations, and average period. Significant differences in average level of asymmetry existed between the readily suggestible (20 Ss) and the resistant (19 Ss); no differences in average period were disclosed. Differences in suggestibility effects existed in the state of hypnosis and wakefulness. Average level of asymmetry may serve as 1 of the "objective quantitative measures of suggestibility in man in the wakeful state." The test for suggestibility was the classical one wherein the inability to unlock

interlocked fingers of the 2 hands is suggested.—I. D. London.

9277. Heinrich, P. (Technical U., Inst. of Psychology, Berlin, W. Germany) **"Free looking time": Eine Methode zur Präferenzbestimmung.** ["Free looking time": A method for the determination of preference.] *Psychologie und Praxis*, 1970(Apr), Vol. 14(2), 79-93.—Presents a summary report of research and theory with "free looking time," also known under "exploratory behavior," "duration of fixation," and other terminology. An attempt is made at a differential theory of free looking time without being systematic. Basic determiners are discussed, e.g., affective-personal meaning of the stimulus, difficulty of stimulus, or secondary motivation (sets). Free looking time seems to differ from other preference behavior, e.g., rating or choice, but specific characterization is not as yet possible.—R. F. Wagner.

9278. Kurie, George D. & Mordkoff, Arnold M. (New York U.) **Effects of brief sensory deprivation and somatic concentration on two measures of field dependence.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 683-687.—Conducted an experiment (a) to substantiate the indirect evidence that brief sensory deprivation (SD) has different effects on 2 measures of field dependence, the Rod-and-Frame Test (RFT) and the Embedded Figures Test (EFT); and (b) to investigate whether it is the increased awareness of somatic activity which is involved in the more veridical RFT performance while having no effect on EFT. The RFT and EFT were administered to 3 groups of 10 Ss each before and after 1 group had been submitted to 1 hr. of SD, a 2nd group to 1 hr. of somatic concentration, and a 3rd group to a control period. Results support the above hypothesis: the greatest changes in RFT performance occurred

in the somatic concentration condition which were significantly greater than those obtained in the SD condition, which in turn were significantly greater than those occurring in the control condition. No significant effects were obtained with respect to the EFT.—*Journal abstract*.

9279. Monge, Rolf H. & Blank, Harriett D. (Syracuse U.) **Is there an incentive magnitude effect on adult performance?** *Psychological Reports*, 1970(Dec), Vol. 27(3), 983-992.—4 experiments comparing the absolute and relative interpretations of the incentive magnitude effect failed to show the effect with normal, community-dwelling, adult female Ss (N = 40, 20, 46, and 40, respectively). Money was the incentive commodity used in both card-sorting and digit-symbol tasks. It was paid both to the individual S and to S's women's club, on both a per-task and per-unit-of-accomplishment basis. The limitations of both the incentive magnitude effect and of the methodology of these experiments are discussed.—*Journal abstract*.

9280. Morf, Martin E. & Howitt, Rhoderick. (U. Windsor, Ontario, Canada) **Rod-and-Frame Test performance as a function of momentary arousal.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 703-708.—Hypothesized that within a narrow range of intermediate arousal or disruption levels the greater the physiologically measured disruption, the greater the decrement in Rod-and-Frame Test (RFT) performance. 44 undergraduates were randomly assigned to 2 groups. Solvable anagrams were administered to the control group, unsolvable anagrams to the experimental group. Pre- and postanagram RFT and palmar sweat scores were obtained. Analysis of variance indicated no significant effect of the experimental treatment on either measure. A correlation of .44 ($p < .025$) between RFT and palmar sweat difference scores, obtained by subtracting post- from preanagram scores, was obtained for the experimental group. (20 ref.)—*Journal abstract*.

9281. Nerhardt, Göran. (U. Stockholm, Psychological Lab., Sweden) **Humor and inclination to laugh: Emotional reactions to stimuli of different divergence from a range of expectancy.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 185-195.—Conducted an experiment to test the general hypothesis, derived from the incongruity theory of humor, that the experience of humor or the inclination to laugh is a function of the divergence of a perceived state of affairs from the expected state. A pilot study determined the range of expectancy for men and women with a series of weights. In the main experiment, undergraduates closed their eyes and judged the weight handed to them as light or heavy, and whether the weight was very, quite, or not very heavy or light. Whether the S laughed or not was observed for each weight. Results indicate that women laughed more than men, laughter increased from the 1st to the last weights in the trials, and the proportion of laughter decreased for the middle weights and increased for the very light or very heavy weights. Results support the hypothesis.—*Journal abstract*.

9282. Raynor, Joel O. & Rubin, Ira S. (State U. New York, Buffalo) **Effects of achievement motivation and future orientation on level of performance.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 36-41.—Based on n Achievement and test anxiety scores, 588 undergraduates were divided into 4 motive groups. Performance on a 3-step arithmetic task presented as the 1st of a series of 4 tests was measured under

2 sets of instructions. In the contingent condition, success on a test was necessary to work on each successive test, while failure meant loss of the opportunity to continue. In the noncontingent condition, working on any test was not dependent upon prior success or failure. Ss were led to believe that their chances of success were .5 in each test. Ss high in Achievement and low in test anxiety (high-low) performed significantly better in the contingent than in the noncontingent condition, the opposite motive group (low-high) performed significantly worse in the contingent than in the noncontingent condition, and Ss classified low-low performed about the same in the 2 conditions. Results are as predicted by elaborated theory of achievement motivation. Findings for the high-high group were not. The superiority of the high-low over the low-high group was highly significant in the contingent condition but was not significant in the noncontingent condition. (19 ref.)—*Journal abstract*.

9283. Sales, Stephen M. (Carnegie-Mellon U.) **Some effects of role overload and role underload.** *Organizational Behavior & Human Performance*, 1970(Nov), Vol. 5(6), 592-608.—Simulated role overload and underload in working conditions in a laboratory setting, and examined the effects which they exerted on the behavior, attitudes, and physiology of 73 male undergraduates. Differences obtained among Ss who differed in need achievement and test anxiety in their reactions to these conditions were traced. Data suggest that role overload was stressful to overloaded Ss and that the effects of this stress were most severely experienced by Ss with specific personality constellations. Data also indicate that the effects of variations in objective work load may be substantially different from the effects of variations in subjective (experienced) work load. (23 ref.)—*Journal abstract*.

ATTENTION & EXPECTANCY & SET

9284. Bäumler, Günther. (Inst. of Ergonomy, Munich, W. Germany) **Verzögerte Sprachrückmeldung und Interferenzneigung: Überprüfung einer Hypothese.** [Delayed feedback of spoken words and tendency to interference: Test of a hypothesis.] *Zeitschrift für experimentelle und angewandte Psychologie*, 1970, Vol. 17(3), 357-370.—Compared 2 interference effects with spoken language: the Lee effect (delayed auditory feedback), and the Stroop effect (interference in color naming due to differences between the names of the colors and the color of the ink in which they are printed). The expectation that the Stroop conflict situation would increase the Lee effect could not be confirmed statistically although the results pointed to the expected direction. "Male Ss showed more dependency on interference than female Ss." (English & French summaries) (16 ref.)—*W. J. Koppitz*.

9285. Dooley, Roger P. & Harkins, Larry E. (Xerox Corp., Research Lab., Rochester, N.Y.) **Functional and attention-getting effects of color on graphic communications.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 851-854.—Compared the learning and attention effects of color when the color was used either as an information code or decoration on bar charts. 3 groups of 15 Ss were given the opportunity to study either a functionally colored, decoratively colored, or black and white chart which was placed in a room with each S while he was participating in another experiment. Ss

were not instructed to study the chart, and a test on the content was administered at the conclusion of the other experiment. Results show that the color, regardless of how it was used, increased the attention given the chart ($p < .05$). While the learning scores were somewhat higher for the colored charts, the effect was not significant. It is concluded that, for these charts, at least, color's principal effect was motivational, and a black and white code was equally effective as an information transmitter.—*Journal abstract*.

9287. Gulian, Edith. (Academy of the Romanian Socialist Republic, Inst. of Psychology, Bucharest) **Corrélat psychophysiologiques de la décision dans une épreuve de vigilance auditive.** [Psychophysiological correlates in decisions during an auditory vigilance test.] *Revue Roumaine des Sciences Sociales-Serie de Psychologie*, 1970, Vol. 14(1), 17-29.—Despite their relative simplicity, analysis of vigilance tests reveal complex mental processes dealing with attention, perception, and decision. The 2 most common errors in a vigilance task is nondetection of signals, or an individual's overconfidence in his inability to commit an error. In a research conducted on 15 individuals, it was noted that the percentage of omissions and incorrect detections varies little with various noise levels, but that the former exceeds the latter by almost double. It is affirmed that utilization of various indicators confirms the existence of differences in the certainty of detection of critical signals and that noise has a direct bearing on cerebral activity, thus contributing to the elevation or the reduction of assuredness in decisions pertaining to a vigilance task. (16 ref.)—*I. Sirotin*.

9288. Merrens, Matthew. (Western Illinois U.) **Generality and stability of extreme response style.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 802.—Measured extreme response style in 2 minimal-content situations in which the operation of response set or content factors would be negligible. 90 female adults were Ss. Both visual and auditory measures of extreme response style were stable over time, and also showed substantial generality. In contrast to L. G. Rorer's statement regarding the unimportance of response style, the present results suggest that stylistic factors are not test specific, are not unstable, and are important in evaluating behavior.—*Author abstract*.

9289. Spence, Donald P. & Grief, Barry. (New York U., Research Center for Mental Health) **An experimental study of listening between the lines.** *Journal of Nervous & Mental Disease*, 1970(Sep), Vol. 151(3), 179-186.—Monitored S's attention while he listened to an ambiguous passage by measuring the randomness of serial production of letters while Ss listened. 2 groups of 12 male undergraduates each were used—primed for ambiguous sexual content and unprimed. In both groups, randomness of the letters, as measured by H, an index of marginal frequencies, was significantly lower during distraction (passage being played) than during no distraction (no passage). In addition, more frequent letters (E, S, T, etc.) were used during distraction than during no distraction. Findings suggest that attention was being attracted by the distracting material. Of

crucial interest is the finding that recall of latent sexual content was higher in the primed group and positively correlated with randomness, i.e., recall of sexual content in the primed group was facilitated by listening away from rather than toward the passage.—*Journal abstract.*

9290. Weitzenhoffer, Andre M. & Brockmeier, James D. (Veterans Administration Hosp., Psychiatry Service, Oklahoma City, Okla.) **Attention and eye movements: Some results and general considerations.** *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 130-142.—Tested the hypothesis of M. Amadeo and C. Shagass that a nonspecific positive relationship exists between REM rate and degree of attentive activity. Horizontal conjugate eye movements were recorded from 11 female Ss, all but 1 of whom were nursing students, during conditions of relative inattention and attention with eyes open and eyes closed. Eye closure alone was observed to have a strong reducing effect upon the REM rate. Attention was found to have no significant effect upon REM rate when the eyes were closed. In contrast, when the eyes were open, there was a marked reduction in REM rate associated with attentive activity. Results are discussed as complementing and supplementing the earlier findings. Various problems relevant to research on attention and eye movements are considered.—*Journal abstract.*

MOTOR PERFORMANCE

9299. Presbie, Robert J. (State University Coll. New York, New Paltz) **Effects of instructions on human free-operant avoidance conditioning with white noise.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 895-898.—24 high school females in a free-operant avoidance procedure had a 100-db white noise of either .5-, 3-, or 6-sec duration as a stimulus to be avoided. The noise-noise interval was 7.5 sec., and the response-noise interval was 22.5 sec. Ss were given either minimal or more detailed instructions concerning the key-pressing response to be made. Ss getting the more detailed instructions avoided more of the programed noises. 1 effect of receiving only minimal instructions was that such Ss made a number of "odd" non-key-pressing responses, e.g., attempting to or actually breaking the apparatus.—*Journal abstract.*

Verbal Learning

9300. Abra, John C. (U. Calgary, Alberta, Canada) **List differentiation and the point of interpolation in free-recall learning.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 665-671.—Taught Ss 2 lists of unrelated items by free-recall learning. For list differentiation (LD), both lists were presented in a mixed order and S identified the list membership of each item. In Exp. I the interval between List-1 learning and the LD test was 48 hr.; List 2 was learned either 0, 24, or 48 hr. after List 1. The 3rd condition showed superior LD to the other 2, which did not differ. There were 23 high school Ss in each condition. In Exp. II, LD followed List 2 immediately, and List 2 was learned either 0 or 48 hr. after List 1. With 4 or 6 trials of List-2 learning the 48-hr condition showed superior LD, the 0 condition with 2 trials. There were 18 undergraduates in each of the 6 conditions. It is concluded that point of interpolated learning affects the difference in relative strength between competing lists, on which LD largely depends.—*Journal abstract.*

retention of vocabulary. *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1609.

9302. Bregman, Albert S. & Wiener, Judith R. (McGill U., Montreal, Quebec, Canada) **Effects of test trials in paired-associate and free-recall learning.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 689-698.—Gave 40 undergraduates either paired-associate (PA) or free-recall (FR) learning of CVC syllables. In each group, there were 2 conditions: (a) 1 test trial after each presentation, and (b) 3 test trials after each presentation. Analyses were performed of (a) total recall; (b) trial-to-trial acquisition, retention, and forgetting; and (c) trial-to-trial order stability (in FR). Results show that FR benefits more from test trials than does PA, is less stable from trial to trial, conforms better to the "total time hypothesis," and benefits more from short-term memory of the presentation trials.—*Journal abstract*.

9303. Cramer, Phebe. (U. California, Inst. of Human Learning, Berkeley) **Associative strength as a determinant of mediated priming.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 658-664.—Investigated the influence of number of priming words, as compared with the associative strength of the primers, in producing the priming effect. In Exp. I, 48 undergraduates were randomly assigned in blocks of 6 to receive 1, 2, or 3 medium associative strength priming words prior to the cue stimulus; in Exp. II, 3 groups of 16 Ss received 1 strong or weak primer, 3 groups received 1 medium plus 1 strong or weak primer, and 1 group received medium primers in the middle position with the 1st and 3rd primers being $\frac{1}{2}$ strong and $\frac{1}{2}$ weak; in Exp. III, 43 Ss received 1 of 3 conditions: 1 or 2 primers or a medium primer in the middle position. Results indicate that priming is a function both of the absolute and relative associative strength of the priming words, and that number of primers per se is not significant.—*Journal abstract*.

9305. Lerner, Richard M. (Eastern Michigan U.) **Semantic generalization of classically conditioned responses: A reinterpretative review.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 759-765.—Reports that E-expectancy effects upon Ss' responses do not appear to enter into all areas of psychological investigation. However, in 1 area of verbal learning, that of semantic generalization (SG), the presence of this variable and S set to conform to the demand characteristics of the experimental situation appear. It is hypothesized that an interaction between these 2 variables accounts for the SG phenomenon. Methodological and theoretical inadequacies of the research are discussed and the literature is reviewed in terms of this hypothesis. Based upon a reconceptualization of the E-expectancy \times S-set interaction, some heuristic implications of the present formulation for other areas of psychological investigation are discussed. (18 ref.)—*Journal abstract*.

9306. Steil, Peter & Hynum, Leslie. (Wisconsin State U., Whitewater) **The von Restorff isolation effect employing one and three isolates.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 963-966.—60 college students were required to learn a serial list of 13 3-letter nouns either with the middle item (E_1) or the 3 middle items (E_2) isolated, or without any isolates (C), to a

learning criterion of 2 perfect trials. Employing the perceptual enhancement of isolation, it was found that there was a significant facilitation of the learning of the isolated item in E_1 . This facilitation did not occur when 3 items were isolated, nor was the learning of the list as a whole facilitated in either E_1 or E_2 .—*Journal abstract*.

9307. Wiener, Yoash. (Case Western Reserve U.) **Rate of presentation as a factor in isolation.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 735-738.—Tested an hypothesis derived from the "differentiation" theory of E. Saltz that the relative effect of isolation would be greater in a list with a little degree of differentiation (fast rate of presentation) than in a more differentiated one. 80 undergraduates learned a serial list of 10 CVCs under 4 experimental conditions. 2 rates of presentation (fast and slow) and 2 isolation conditions (isolation and no-isolation of the 6th item) were combined in a 2×2 factorial design. A significant interaction of isolation and rate of presentation was found. The hypothesis was supported. 2 additional hypotheses based on this theory were tested and are discussed.—*Journal abstract*.

9308. Zeaman, David; Campione, Joseph, & Allen, Max. (U. Connecticut) **Opposing effects of redundancy in retention of a verbal discrimination.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 607-613.—Found in a verbal learning and memory experiment designed as an analog of standard 2-choice visual discrimination procedures that the addition of redundant word stimuli facilitated performance by 48 male and female undergraduates only if the words were highly associated ("chunked"). The addition of nonassociated redundant words ("unchunked") had a decremental influence. These effects were inferred to be more on retention than learning. (21 ref.)—*Journal abstract*.

Verbal Paired Associate Learning

9309. Butler, Brian E. & Merikle, Philip M. (U. Waterloo, Ontario, Canada) **Uncertainty and meaningfulness in paired-associate learning.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 634-641.—Examined the relationships among the number of encodings for a CVC trigram, meaningfulness (M), and the rate of learning in a paired-associate (PA) task. In Exp. I, 100 male undergraduates gave 1 association each to 100 CVCs. 4 scores representing encoding variability were derived. In Exp. II, learning scores were found for each CVC as a stimulus term and as a response term in a PA task. A factor analysis indicated that encoding variability is more important than M for the stimuli, while the reverse is true for the responses.—*Journal abstract*.

9310. Butter, M. Johnna & Palermo, David S. (Pennsylvania State U.) **Effects of imagery on paired-associate recall as a function of retention interval, list length, and trials.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 716-719.—Gave 2 alternate learning and recall trials to 96 undergraduates on 16 pair lists constructed to consist of concrete-abstract (CA), AC, CC, and AA pairs. Exp. II was conducted similarly with 96 undergraduates but either 2 or 4 trials were given on 32 pair lists. In both experiments recall of responses was measured immediately and 48 hr. later. Results in both cases indicate significant effects of stimulus concreteness, response concreteness, and retention interval; in Exp. II the number of learning trials was also a significant variable. In both experiments total

recall under all conditions was in the order CC>CA>AC>AA. These findings provide additional support and greater generality for the imagery hypothesis advanced by A. Paivio.—*Journal abstract.*

9311. Ley, Ronald & Locascio, David. (State U. New York, Albany) **Effects of associative reaction time and meaningfulness of stimulus terms in forward and backward paired-associate learning.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 867-873.—48 Ss learned a list of paired associates at either a 2- or 7-sec presentation rate (PR), in which the stimulus terms were assessed on the bases of associative RT and meaningfulness (M). In forward anticipation learning, the effect of RT of stimulus terms was not significant but M was, with the greatest effect at the 2-sec PR. In a backward recall test, the short-latency RT stimulus terms were recalled more frequently than the long-latency RT terms and high-M terms were recalled more frequently than low-M terms. Results were interpreted in terms of a 2-stage analysis in which the effects of M were related to stimulus recognition and the effects of RT to stimulus recall.—*Journal abstract.*

9312. Mills, John A. & Winocur, Gordon. (U. Saskatchewan, Saskatoon, Canada) **Inter-item associative strength and proactive inhibition in paired-associate learning.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 933-934.—Presents a 2×2 factorial experimental design with 2 levels of prior list (1 or none), 2 of response term interitem associative strength (high or low), and a 15-min retention interval. The expectation was that high interitem associative strength would reduce proactive inhibition. 48 Ss were used. The hypothesis failed; the proportion of function words/list had no effect on recall.—*Journal abstract.*

9313. Murray, Harry G. (U. Western Ontario, London, Canada) **Incidental paired-associate learning as a function of interstimulus interval.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 642-646.—Exp. I, presented pairs of CVC trigrams to 100 adults as distracting stimuli in the context of a probability learning task. The interstimulus interval (ISI), was 1, 2, 4, or 7 sec. for different groups of 20 Ss. Amount of incidental learning of the CVC pairs, as measured by facilitation of subsequent intentional learning of the same pairs, was a decreasing function of the ISI. Exp. II replicated this finding in a within-S design using 31 undergraduates. Data are contrary to the results of previous studies investigating paired-associate (PA) learning under intentional practice conditions. It appears that PA learning obeys the law of contiguity only under practice conditions which minimize covert rehearsal and mediation activities in the S.—*Journal abstract.*

9326. Oléron, G., Segui, J., & Lieury, A. (Sorbonne, Lab. of Experimental & Comparative Psychology, Paris, France) **Activités mnémoniques et nature linguistique des associations.** [Mnemonic activities and the linguistic nature of associations.] *Bulletin de Psychologie*, 1969-1970, Vol. 23(17-19), 1045-1059.—3 experiments were designed to evaluate the effects of linguistic structure upon the learning of word pairs, linguistic structure and a 10-sec interpolated activity upon short-term recall, and providing a reference word or title for a list of words of different linguistic classification to be learned. The hypotheses that words constituting a minimal syntactic sequence and those representing paradigmatic pairs would be best recalled were supported. The total number of words recalled in all linguistic classes was significantly fewer with an interpolated task (successive subtractions of 3 from an arbitrary number) than with no delay ($p < .0005$). Paradigmatic pairs were recalled a little less often than the other semantic classes but not significantly so. Items in Exp. III were composed of a list title or reference word (e.g., lion), 3 words of different linguistic relationship (e.g., tiger, African, ferocious), and 3 neutral words (e.g., concerto, residue, synovia). Order and frequency of presentation of the items were controlled and counterbalanced. The hypothesis that the linguistically related words could be recalled better than neutral words under both no delay and interpolated task conditions was supported ($p < .0005$). Studies of the effect of verbal relationship upon recall must take into account not only the strength of the association between the words themselves but the syntactic-semantic nature of their relationship as well. 9328. Postman, Leo; Burns, Sheila, & Hasher, Lynn. (U. California, Berkeley) **Studies of learning to learn: X. Nonspecific transfer effects in free-recall learning.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 707-715.—The experiment comprised a training and a test phase. 3 methods were used in the training phase: random order of presentation and free recall (RF); constant order of presentation and free recall (CF); and constant order of presentation and serial recall (CS). The method in the test phase was always RF. Consistency of output order was manipulated by instructions in both phases. There were 10 groups of 18 undergraduates. Acquisition of the training lists was faster for CF and CS than for RF but practice gains were comparable for the 3 methods. Method of prior practice per se did not influence test-list performance; however, there was an interaction of conditions of training and instructional treatments.—*Journal abstract.*

9330. Rundus, Dewey; Loftus, Geoffrey R., & Atkinson, Richard C. (Stanford U.) **Immediate free recall and three-week delayed recognition.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 684-688.—Showed 25 female undergraduates 10 lists of words, each list followed by a free-recall test. Overt rehearsal of the word lists was required during study and

was tape-recorded. 3 wk. later Ss returned for a recognition test on these words. Initial recall and 3-wk delayed recognition were increasing functions of amount of rehearsal accorded the item. The probability of delayed recognition decreased as a function of the initial serial study position, and appeared to increase as a function of its output position on initial recall. Further analysis of this latter result suggested that delayed recognition 1st rises and then falls as a function of output position in initial recall.—*Journal abstract.*

9331. Schnorr, J. A. & Atkinson, R. C. (Stanford U.) **Study position and item differences in the short- and long-term retention of paired associates learned by imagery.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 614-622.—Instructed 12 male and 12 female undergraduates to study a list of 96 concrete noun paired associates and imagine each pair in an interactive scene. Recall tests were administered immediately following study, and 1 wk. later. Recall on the initial test improved as the position of the noun-pair in the study list increased, but recall a wk. later was inversely related to study position. Analyses of item differences suggested that if an image is not immediately remembered during test, information derivable from the stimulus cue can serve to facilitate recall.—*Journal abstract.*

9333. Slak, Stefan. (U. Toledo) **Memory span for quinary and decimal digits.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 750.—Tested 20 undergraduates with quinary digits (0-4) and 20 with decimal digits (0-9) in a classical memory-span test. Mean memory span for decimal digits was significantly higher than for quinary digits. It is concluded that the "superiority of decimal over quinary code... stems from the greater dissimilarity of various portions of decimal sequences and greater information content of decimal digits."—*S. Knapp.*

Short Term & Immediate Memory

9334. Bowen, John H. (State U. New York, Albany) **Effects on category clustering of category-name cues and frequencies of occurrence and familiarity scale values of nouns.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 859-864.—Measured the short-term organized recall (category clustering) of 756 undergraduates with the repetition ratio for 40-word stimulus lists. Each list, which was presented once to each S, contained 10 nouns from each of the animal, articles of dress, occupation, and persons' names categories. 3 independent variables were combined in a $3 \times 2 \times 2$ arrangement: 3 levels of the frequencies of occurrence of the words, $.22 < 1$, 1-4 and 5-100+ words/million; 2 levels of familiarity scale values of the words, low or high familiarity; and 2 levels of administration of retrieval cues in the form of category name instructions, instructions, or no instructions. The frequency of occurrence and familiarity variables produced separable effects on the category clustering of the nouns; the repetition ratio was an increasing function of each variable. The greatest effects of frequency variations were found at the highest frequency level. Retrieval cues did not influence category clustering. Comparison with previous work suggests that the inclusion of categorical

intrusions in the repetition ratio inflates that ratio when words have low familiarity and are of low and intermediate frequencies of occurrence. (15 ref.)—*Journal abstract*.

9335. Cavazzuti, Valeria & Canestrari, Renzo. (U. Bologna, Medical School, Italy) **Interferenza mnestica indotta da stimoli "marginali" in situazione di memoria a breve termine.** [Memory interferences induced by "marginal" stimuli in short term memory situations.] *Archivio di Psicologia, Neurologia e Psichiatria*, 1970(May), Vol. 31(3), 251-261.—Marginally interpolated materials interfere with learning but similarity does not seem to play so critical a role in short-term memory as in long-term memory in producing retroactive inhibition. Evidence for this hypothesis seems to support a dichotomic theory of memory.—L. L'Abate.

9336. Clark, W. Crawford & Greenberg, David B. (New York State Psychiatric Inst., New York) **Effect of stress, knowledge of results, and proactive inhibition on verbal recognition memory (d') and response criterion (L_z).** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 42-47.—Analyzed recognition memory for CVC trigrams within the context of signal detection theory with 32 undergraduates. Without feedback, instruction-induced stress caused Ss to perform well initially, but with a subsequent decline in performance. The nonstressed group, in contrast, showed poor recognition memory on the 1st trial, but improved later. The Stress \times Trials interaction revealed a positive relationship between recognition memory (d') and response criterion (L_z): under stress d' and L_z decreased over trials, while without stress both increased. Ss who received both stress-inducing instructions and knowledge of results were far more anxious according to the Zuckerman Affect Adjective Check List. This group also set the lowest response criterion and demonstrated the poorest memory by the final trial. Knowledge of results interfered with recognition memory and caused Ss to lower (optimize) their response criterion over trials. (19 ref.)—*Journal abstract*.

9339. Zoh, Myeong-Han. (Seoul National U., Korea) **Influence of relative distance upon immediate free recall.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 687-690.—Examines accessibility of an item to recall by varying an associative hierarchy factor of relative distance (RD) which was defined as distance of communality of primary associate to secondary 1, 2 lists of remote distance (R) vs. near distance (N) words were randomized and verbally presented. 2 groups of Ss (N=64 and 43) were used. Ss' immediate free recall showed that amount of correct recall and extraneous intrusion was significantly more frequent in the N than in the R list. As the stimulus words were controlled for possible associative indices except RD, associative function recall was discussed.

THINKING

9340. Chlewiński, Zdzisław. **Charakterystyka głównych współczesnych podejść do badań w**

zakresie psychologii myślenia. [Characteristics of the main contemporary approaches to the problems of research into the psychology of thinking.] *Roczniki Filozoficzne: Annales de Philosophie*, 1969, Vol. 17(4), 53-78.—According to the author, describes Western investigations into the problems as objective, naturalistic, social, and psychophysiological. Learning and cognitive theories are considered as being basic and developmental, structural, and simulation by computers as additional. Ways to find bases for common terminology and perspectives for research are suggested. (53 ref.)—*English summary*.

9341. Foss, Donald J. (U. Texas) **Some effects of ambiguity upon sentence comprehension.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 699-706.—Presented auditorily 3 groups of 20 undergraduates with 24 ambiguous and 24 unambiguous sentences. 1 group was asked to push a button whenever a particular phoneme occurred. RT for this response was significantly longer in ambiguous sentences. A 2nd group had to classify each sentence as ambiguous or not after it was presented. Lexical ambiguities were discovered somewhat faster than underlying structure ambiguities. A 3rd group performed both of these tasks. In this group, RT to monitor for the phoneme was longer for ambiguous than for unambiguous sentences only when S himself classified the sentence as ambiguous. Ss in the 3rd group were significantly slower on both tasks.—*Journal abstract*.

9342. Hardyck, Curtis D. & Petrinovich, Lewis F. (U. California, Inst. of Human Learning, Berkeley) **Subvocal speech and comprehension level as a function of the difficulty level of reading material.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 647-652.—Took EMGs from the larynx, chin-lip, and forearm flexor of 3 groups of 6 undergraduates each during the reading of materials judged to be conceptually easy and difficult. A normal group had EMGs recorded during reading. A feedback group was required to keep laryngeal muscle activity at nonreading relaxation levels during reading through use of an audio signal activated by any increase in muscle action in the larynx. A control group was required to maintain similar relaxation of the forearm flexor by the same feedback apparatus. All Ss took examinations on the material read. The laryngeal feedback group did significantly less well on comprehension of the difficult material than the other groups. The mediating effects of speech at a subvocal level in information processing are discussed and a theoretical model developed.—*Journal abstract*.

9344. Means, John R. & Harper, Jay W. (U. Montana) **Spontaneous change and voluntary time in a think tank.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 878.—Hypothesized that Ss "scoring high on spontaneous change would voluntarily keep themselves reinforced for cognitive activity when given the opportunity to think about anything they liked in a large empty room (think tank) for as long as they wished." 20 undergraduates were asked to arrange 4 lines of unequal length on 10 separate circles of filter paper. The arrangements were scored by taking the displacement of angles and distances summed across drawings. Ss were then given the opportunity to use the think tank for as long as they wished. A moderate correlation ($p < .01$)

between time in the think tank and spontaneous change was found which suggests "the importance of cognitive styles with respect to independently pursued activity in a rather unstructured situation."—*S. Knapp.*

9345. Oléron, Pierre. *Sur les stratégies dans l'identification des mots.* [Strategies in the identification of words.] *Journal de Psychologie Normale et Pathologique*, 1970(Jul), No. 3, 313-323.—Studied the role of letters, which are either stems of words or parts of their beginnings or endings, in the identification of words. 24 students associated 12 artificial words with 12 French words, after which 2 tests were given: (a) one in which the "parts" letters were replaced with others, and (b) one in which these letters were unchanged, but either the initial or final letters were modified. Confusions were much more numerous in the 2nd test which indicated that the Ss depended largely upon the "parts" letters for word identification. In addition, the beginnings of the words were more often used than the endings.—*L. A. Ostlund.*

Problem Solving

Concepts

9349. Fishkin, Steven M. & Pishkin, Vladimir. (Veterans Administration Hosp., Oklahoma City, Okla.) *Tactual and visual concept identification. Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 715-723.—Compared information processing efficiencies for the visual and tactual modalities in 128 male and female undergraduates. With the same set of stimulus objects used for the 2 modalities no difference between visual and tactual concept identification (CI) was obtained. Significant interactions were found between S's sex, relevant dimensions, and similarity of stimulus levels. Independent measures of the salience and discriminability of the stimulus dimensions were obtained in an attempt to relate these factors to CI performance. It is concluded that information presented in the tactual modality can be used in classifying stimulus objects into 2 categories with about the same facility as visual information from the same objects and along the same stimulus dimensions.—*Journal abstract.*

DECISION & CHOICE BEHAVIOR

9353. Lee, Wayne. (1516 Sonoma Ave., Albany, Calif.) *Preference strength, expected value difference and expected regret ratio.* *Psychological Bulletin*, 1971(Mar), Vol. 75(3), 186-191.—Reports that in previous research, strength of preference for 1 gamble of a pair has been related to expected value difference (D) or to an index based on regret (R). In previous studies, however, D and R values have been strongly confounded, and the relations reported could have been due to D, to R, or to both. The mathematical relationships between D and R are discussed, and constructing sets of gamble pairs orthogonal in D and R is presented.—*Journal abstract.*

9354. Rosenberg, Seymour & Markham, Bonnie. (Rutgers State U.) *Choice behavior in a referentially ambiguous task.* *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 99-106.—Studied the way a listener selects a speaker's referent object, when 2 or more objects in the environment appear to fit the speaker's description, as a particular instance of choice behavior. Results of previous studies suggest that the listener's choice process in such referentially ambiguous situations is a combination of probabilistic and deterministic processes. Speaker descriptions in these studies were limited to single-word cues. The generality of previous findings when listener choices are based on descriptions that are not restricted in length or type was tested. A series of 18 sets of 3 snowflakes each and 36 of their 54 (3×18) possible subsets of 2 snowflakes was presented to 115 listener Ss. A paragraph description previously given by other speaker Ss accompanied each set and was used by listener Ss to identify the referent. Results are similar to those found in previous work. The possibility is discussed that certain individual differences and/or unavoidable memory effects make the process appear more deterministic than in actuality.—*Journal abstract.*

PHYSIOLOGICAL PSYCHOLOGY

9356. Comfort, A. (University Coll., London, England) *Biological theories of aging.* *Human Development*, 1970, Vol. 13(2), 127-139.—Aging in mammals appears to be an information loss, probably at the cellular or molecular level. The current models for this process and the prospects for its controllability are reviewed. Stochastic, developmental, clonal, and im-

munological models of aging, which are not mutually exclusive, all offer possibilities for rate-modification in man, with reasonable prospects of clinical application during the next decade.—*Journal abstract.*

9357. DiCara, Leo V. (Rockefeller U.) **Learning in the autonomic nervous system.** *Scientific American*, 1970(Jan), Vol. 222(1), 30-39.—Reports studies showing that visceral (involuntary) responses in animals can be learned in the same manner as skeletal (voluntary) responses. Through instrumental training, it has been possible to produce changes in heart rate, blood pressure, intestinal contractions, control of blood vessel diameter, and the rate of formation of urine. Ss were rats whose skeletal muscles were paralyzed by curare, in whom reward for visceral learning was either electrical stimulation of the brain or avoidance of mild electrical shock. Other studies have shown "significant instrumental learning of heart-rate and blood-pressure control by human beings" and indicate that powerful techniques developed in animal experiments are being applied to the treatment of cardiovascular disorders in humans.—*P. McMillan.*

9358. Frankshtein, S. I. & Sergeeva, L. N. (Inst. of Normal & Pathological Physiology, Moscow, USSR) **Mekhanizmy depressii tormoznogo refleksa Gering-Breiera.** [Mechanisms involved in depression of the Hering-Breuer inhibitory reflex.] *Fiziologicheskii Zhurnal SSSR*, 1970(May), Vol. 56(5), 764-766.—11 cats were used to study the conditions leading to depression of the Hering-Breuer inhibitory respiratory reflex, involved in respiratory self-regulation and normally present in all animals, but not in man. Reflex apnea was elicited by stimulation of an electrode, chronically implanted in the central part of the vagus nerve. Reflex apnea constantly arose during sleep and was somewhat greater during the synchronized phase of sleep than during the desynchronized (paradoxal) phase. When S was awake, reflex apnea in response to electrical stimulation of the vagus nerve did not arise, as a result evidently of a postsynaptic inhibitory mechanism. It is thought that the absence in man of a "reflex apnea, evoked at each inspiration," is the result of the development of speech with its requirement of an uninterrupted flow of air for normal articulation. (English summary)—*I. D. London.*

9359. Konorski, Jerzy. (Nencki Inst. of Experimental Biology, Warsaw, Poland) **Pavlov and contemporary physiological psychology.** *Conditional Reflex*, 1970(Oct), Vol. 5(4), 241-248.—Presents reminiscences shedding light on Pavlov's personal character and scientific views. His contributions to the study of higher nervous activity are briefly discussed in light of more recent developments in the last 20 yr. in physiological psychology.—*M. West.*

9360. Laborit, H., et al. (Boucicaut Hosp., Lab. of Eutonology, Paris, France) **Etude stéréotaxique de l'activité analgésique du chlorhydrate de la morpholinylethoxy-3 méthyl-4 (2'-naphtyl)-6 pyridazine (Agr 614).** [A stereotaxic study of the analgesic activity of 3-ethoxymorpholinyl-4-methyl-(2'-naphtyl)-6-pyridazine hydrochloride (Agr 614).] *Agressologie*, 1970, Vol. 11(3), 221-242.—Presents a stereotaxic study of stimulation of various cerebral areas and of the consecutive central repercussions to slow (8 cps) and fast (70 cps) frequency scintillation stimulation. The stimulation occurred before and after iv perfusion of 40-80 mg. of 3-ethoxymorpholinyl-4-methyl-(2'-naphtyl)-6-pyridazine hydrochloride (Agr 614), the inhibiting effect of which on bradykinine, histamine,

serotonin, and nicotine, and slight on acetylcholine, was observed previously on isolated organs. These properties indicate that the drug possesses a peripheral analgesic activity which is confirmed by the p-phenylquinone and acetic acid tests. The majority of stimulated areas show a threshold increase of 1-2 V after perfusion of the drug. When the latter is injected rapidly in high doses (60-80 mg/kg), it causes a convulsive state, but without loss of consciousness or any clear EEG disturbances. This phenomenon suggests a medullar action as the origin of seizures. (German, Spanish, & Russian summaries)—*English abstract.*

(Moscow State U., USSR) **Ivan Petrovich Pavlov i sovremennaya fiziologiya golovnogo mozga.** [Ivan Petrovich Pavlov and contemporary physiology of the brain.] *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1969(Nov), Vol. 19(6), 911-920.—Presents an analysis of the "relationship of the most important ideas of I. P. Pavlov to those achievements which currently have enriched brain physiology" and which are represented within developments in 3 direc-

tions: (a) classical research on the higher functions of the brain, utilizing CR methods in combination with other methods; (b) general neurophysiological research, utilizing, in the main, electrophysiological and neurosurgical procedures for investigating the functions of the brain, in whole and in part; and (c) psychophysiological research on the functions of the sensory organs. Representative findings are surveyed and related to Pavlovian ideas and theses.—*J. D. London.*

9367. Welch, Annemarie S. & Welch, Bruce L. (U. Tennessee, Memorial Research Center & Hosp.) **Effect of stress and para-chlorophenylalanine upon brain serotonin, 5-hydroxyindoleacetic acid and catecholamines in grouped and isolated mice.** *Biochemical Pharmacology*, 1968(May), Vol. 17(5), 699-708.—Parachlorophenylalanine (PCPA), administered to mice only a few hr. before they were sacrificed, lowered whole brain serotonin (5-HT) only slightly but caused a marked (27%) reduction in 5-hydroxyindoleacetic acid (5-HIAA). Restraint stress for 2.75 hr. markedly elevated 5-HIAA in saline controls and largely prevented its reduction by PCPA. The elevation of brain 5-HT induced by fighting and by restraint stress was prevented by PCPA, although stress did not significantly accelerate the PCPA-induced depletion of 5-HT. Levels of 5-HT and 5-HIAA, and the 5-HIAA/5-HT ratio, were lower in Ss that had been isolated for 3 mo. than in their grouped littermates. Contingent upon future elucidation of possible effects of stress and of PCPA upon active transport of 5-HIAA from the brain, these observations suggest 6 factors. In unstressed Ss, norepinephrine (NE) and dopamine (DA) were lowered by PCPA to about the same small degree as 5-HT. Stress elevated DA which counteracted its tendency to be reduced by PCPA. This resulted in a reduction of the NE/DA ratio in stressed Ss, particularly in Ss pretreated with PCPA. The normal tendency for preisolated Ss to fight when placed together was immediately abolished by PCPA concomitant with an immediate small reduction of NE in the pons and medulla oblongata; aggressive tendencies gradually returned over a period of 1 1/2-5 hr.—*Journal summary.*

9368. Burt, Cyril. **The field concept in psychology.** *Bulletin of the British Psychological Society*, 1969(Oct), Vol. 22(77), 267-271.—Presents a rejoinder to J. G. Taylor's criticisms of Burt's (see PA, Vol. 42:8426) earlier paper on brain and consciousness.—*V. S. Sexton.*

9369. Collins, Robert L. (Jackson Lab., Bar Harbor, Me.) **Unilateral inhibition of sound-induced convulsions in mice.** *Science*, 1970(Feb), Vol. 167(3920), 1010-1011.—Reports that loud sound repeatedly presented to 1 ear after an initial bilateral exposure produced a lateralized inhibition of convulsibility in 50 male SJL/J mice. Inhibition of the right side did not affect the convulsible state of the left side. Processes leading to inhibition and convulsibility may develop independently within the same animal.—*Journal abstract.*

9370. Frommer, Gabriel P. (Indiana U.) **A simple method for terminating chronically implanted electrodes in small animals.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1501-1502.—Describes a method for terminating chronic electrodes in small animals. The

procedure is simple and uses only inexpensive, commercially available parts. A large number of electrodes can be terminated, and the connection is good enough to permit recording routinely from freely moving animals.—*Journal abstract.*

9371. Gil'man, I. M. (Inst. of Normal & Pathological Physiology, Moscow, USSR) **Sravnitel'nyi analiz uchastiya kaudal'nykh i rostral'nykh otdelov stvole v geneze korkovoi sinkhronizatsii.** [Comparative analysis of the participation of the caudal and rostral parts of the brainstem in the genesis of cortical synchronization.] *Zhurnal Vyssheĭ Nervnoi Deyatel'nosti*, 1970(Jul), Vol. 20(4), 585-593.—17 unanesthetized, unrestrained cats with implanted cortical and subcortical electrodes were used in a comparative study of synchronization effects in the EEG after extirpation and low-frequency stimulation of a number of subcortical structures. The most marked synchronization effect was connected with the medial and superior vestibular nuclei and also with the mammillary bodies. These regions possess the greatest number of switchovers and afferent connections per unit volume as compared with the hypothalamus, thalamus, and caudal parts of the brainstem. The specific and nonspecific nature of these subcortical structures is of no importance for the emergence of synchronization in the EEG. The data underscore the important role of the 2 nuclear complexes in the mechanisms of activation and sleep and do not accord with conceptions postulating the existence of special synchronizing and desynchronizing structures or systems to account for either sleep or the wakeful state.—*J. D. London.*

LESIONS

9375. Cooper, Kenneth K. (New York U.) **An electrophysiological study of the effects of castration on the afferent system of the glans penis of the cat.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3509.

9376. Fernández-Collazo, Edmundo L. & Foglia, Virgilio G. (U. Buenos Aires, Medical School, Argentina) **Sexual behavior of the male diabetic rat.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1451-1454.—Observed that 56 white male rats with subtotal pancreatectomy (95% showed a reduction in sexual behavior with blood sugar above 200 mg % during 1-hr tests in observation chambers facing a female receptive rat. Occasionally they did not achieve ejaculation, displaying a behavior similar to that after castration, but more often lacking any sexual drive. Results were corroborated by a parallel reduction of the ability to inseminate normal female rats in the usual cages, as revealed by daily vaginal smears during 5 days of cohabitation tests. These facts were not related to body weight. The likely dependence of these findings on alterations in the anterior zone of hypothalamus is also discussed. (25 ref.)—*Journal abstract.*

9377. Peretz, Bertram. (U. Kentucky, Medical School) **Habituation and dishabituation in the absence of a central nervous system.** *Science*, 1970(Jul), Vol. 169(3943), 379-381.—Observed habituation and dishabituation in a semi-intact Aplysia preparation in which the CNS was removed. The amplitude of withdrawal responses in the gill decreased in proportion to the rate of water drops applied (1 drop/.5 min. to 1 drop/2.5 min. at 15° C). The effects of habituation lasted for at least 2 hr. A dishabituated response was elicited by stopping the water drops or electrically stimulating the preparation. The gill contained nerve cell bodies, and habituation and dishabituation appeared to be properties of these peripheral neurons.—*Journal abstract.*

Brain Lesions

9378. Finger, Stanley & Frommer, Gabriel P. (Washington U.) **Effects of cortical and thalamic lesions on temperature discrimination and responsiveness to foot shock in the rat.** *Brain Research*, 1970, Vol. 24(1), 69-89.—Assigned 40 male albino Sprague-Dawley rats to receive lesions in 1 or both somatosensory cortical areas or in thalamic nuclei which receive lemniscal or extralemniscal somatosensory input. 16 control Ss received lesions of the occipital cortex or sham operations. Measures were obtained for (a) acquisition of a series of temperature discriminations as fine as 3° C difference; (b) reflexive flinch, jump, and vocalization responses to foot shocks graded in intensity; (c) a battery of neurological tests; and (d) cortical evoked potentials elicited by shocks to the forepaws. Somatosensory cortical and thalamic lesions produced statistically significant deviations from normal performance when reflexive response threshold to shock and temperature discrimination data were analyzed together or when the former were analyzed alone. Refined statistical analyses failed to reveal specific lesions responsible for these deviations, although 3 of 5 Ss with lesions of the parafascicular complex performed poorly on the tem-

perature discrimination test. Experimental Ss also showed some deficiencies on a number of neurological tests. Short latency cortical evoked potentials to forepaw shocks were present in several Ss which exhibited deficits in temperature discrimination or deviant responsiveness to foot shock. The increased variability in performance among the experimental Ss is discussed. (40 ref.)—*Journal summary.*

9379. Guilbaud, G. & Menetrey, D. (Inst. National de la Santé et de la Recherche Médicale, Paris, France) **Rôle joué par les voies et aires de projection lemniscales dans le contrôle des afférences extralemnisciales au cours du sommeil naturel chez le chat.** [The role of the lemniscal projection areas and tracts in the control of extralemniscal afferents during natural sleep in the cat.] *Electroencephalography & Clinical Neurophysiology*, 1970(Sep), Vol. 29(3), 295-302.—Studied the evolution during sleep of somatic responses recorded in the centrum medianum (CM) of 20 cats with implanted electrodes, following section of the lemniscal paths or uni- or bilateral ablation of the primary somatomotor cortex. Changes in amplitude of the CM responses during the various stages of sleep were almost completely abolished and the responses during wakefulness and fast sleep remained similar to those normally encountered during slow wave sleep. A reduction in the amplitude of the responses during fast sleep and wakefulness was again found 4 wk. after uni- or bilateral lemniscal section or unilateral cortical ablation, but not after bilateral ablation of the somatomotor cortex. During slow wave sleep, there appeared to be a reduction of the inhibitory influence which the somatomotor cortex exercises on extralemniscal afferents while this influence is increased during fast sleep and wakefulness. The site of action of this inhibitory influence, the mechanisms of its action, of its suppression after lesions, and of its reappearance are discussed. (21 ref.)—*English summary.*

9380. Kelly, Jack B. (Vanderbilt U.) **The effects of lateral lemniscal and neocortical lesions on auditory absolute thresholds and frequency difference thresholds of the rat.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-B), 1566-1567.

9381. Petřek, J., Golda, V., & Lisoněk, P. (Palacky U., Medical School, Olomouc, Czechoslovakia) **Orbital cortex of the cat's brain and the orienting reflex to acoustic stimuli.** *Electroencephalography & Clinical Neurophysiology*, 1970(Jun), Vol. 28(6), 619-624.—Describes the dynamics of the poststimulation changes of the EKG and EEG in cats before and after orbital resection. In Ss with intact CNS, the application of an acoustic stimulus produced desynchronization of the EEG and a change in the heart rate. The duration of poststimulation changes of the EEG and EKG depends on the number of repetitions of the stimulus which evoked them. With increasing numbers of repetitions of the stimulus the changes usually grow gradually smaller. An analysis of poststimulation changes of the EEG and EKG in Ss with lesions of the CNS has shown that an acoustic stimulus which evokes marked changes in the EEG and EKG in Ss without lesions fails to do so in Ss with bilateral ablation of the orbital cortex of the brain. A total of 22 Ss were used. (German summary) (32 ref.)—*Journal summary.*

9382. Reeves, Alexander G. & Hagamen, Wilbur D. (U. Rochester, Medical School) **Behavioral and EEG asymmetry following unilateral lesions of the fore-**

brain and midbrain in cats. *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 83-86.—Destroyed the caudate and ventromedial internal capsule in 10 cats and destroyed the midbrain reticular formation, sparing the direct sensory pathways in 11 cats. Contralateral sensory neglect and ipsilateral over-reactivity resulted. Cortical EEG ipsilateral to the lesions when Ss were alert consistently had a pattern usually associated with sleep in normal Ss, whereas the contralateral EEG showed an alert pattern. Asymmetry was enduring when Ss were awake but tended to decrease when asleep. Mechanisms involved in the behavioral asymmetries are discussed. (French summary)—*Journal summary*.

9383. **Sechzer, Jeri A.** (New York Hosp., Cornell Medical Center, White Plains) **Prolonged learning and split-brain cats.** *Science*, 1970(Aug), Vol. 169(3948), 889-892.—Shows a definite relation between inter-hemispheric transfer and speed of learning. 49 split-brain cats were trained in a variety of discriminations, and the success or failure of interhemispheric transfer was evaluated with regard to rate of learning. When inter-hemispheric transfer succeeded, learning time was normal; when interhemispheric transfer failed, learning time was prolonged, becoming at least twice that of normal. Retention was also poor in Ss that exhibited prolonged learning. A normal learning curve appears to be the product of interaction between both cerebral hemispheres during learning.—*Journal abstract*.

9384. **Thomas, Roger K.** (U. Georgia) **Mass function and equipotentiality: A reanalysis of Lashley's retention data.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 899-902.—Detailed analyses of subgroups of rats, defined by lesion size and locus, for K. S. Lashley's (see PA, Vol. 38:8938) retention data suggest that parietal neocortical damage resulted in deficits that were relatively independent of total lesion size. It is suggested that Lashley's retention data provided questionable support for the principles of equipotentiality and mass function as he presented them, and did not include enough Ss to assess the validity of these principles for measures of acquisition following brain damage.—*Journal abstract*.

9385. **Trahiotis, Constantine & Elliott, Donald N.** (Indiana U., Center for Neural Science) **Extension of the Neff neural model to situations demanding discrimination among complex stimuli.** *Journal of the Acoustical Society of America*, 1970(Apr), Vol. 47(4, Pt. 2), 1116-1127.—Reports results of 4 experiments dealing with the auditory performance of 4 adult brain-damaged cats. Ss with the auditory areas of both cortices ablated were able to discriminate auditory stimuli whose frequency components were present in an ongoing neutral background. Ablated Ss were also able to discriminate in situations demanding responses to more than 1 positive cue over trials, though not within trials. Transfer tasks provided evidence that the basis for auditory discrimination could not have depended exclusively on the occurrence of a greater neural event. The inability of the brain-damaged Ss to perform a Neff pattern discrimination was again demonstrated. However, Ss easily performed a frequency discrimination whose frequency components and intensities were identical to those in the pattern task. Both conditions lend credence to results of prior investigations and attest to the adequacy of the ablations performed on Ss. Results of the main experiment are difficult to interpret in terms of W. D. Neff's neural theory. General questions about pattern

discriminations are discussed. (26 ref.)—*Journal abstract*.

9386. **Wishart, Thomas B. & Mogenson, Gordon J.** (U. Western Ontario, London, Canada) **Effects of food deprivation on water intake in rats with septal lesions.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1481-1486.—Subjected 36 Wistar male albino rats to lesions of the septum or to sham operations. Septal lesions caused hyperdipsia in nearly $\frac{2}{3}$ of the animals (septal drinkers) while water intake remained unchanged in the other $\frac{1}{3}$ (septal nondrinkers). During periods of food deprivation sham-operated controls reduced water intake and urine output. Septal drinkers remained hyperdipsic during food deprivation although total water intake was reduced somewhat with longer deprivation periods. Septal nondrinkers became markedly hyperdipsic during food deprivation, drinking as much water as the septal drinkers. Although urine outputs were elevated for septal drinkers throughout the study and for septal nondrinkers during food deprivation, the polyuria was shown to be secondary to hyperdipsia. It is concluded that the septum has a role in the control of water intake but not in the control of urine output. Results are consistent with the hypothesis that the septum is part of a satiety mechanism for the control of water intake. (26 ref.)—*Journal abstract*.

Brain Hypothalamic & Hippocampal Lesions

9387. **Coover, Gary D.** (U. Oregon) **The effects of bilateral hippocampal lesions on avoidance behavior in the two-way shuttlebox and operant box: Performance and extinction.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-B), 1560-1561.

9388. **Rolls, Barbara J.** (U. Oxford, England) **Drinking by rats after irritative lesions in the hypothalamus.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1385-1393.—The deposition of metallic ions in or near the lateral hypothalamus with a stainless-steel anode caused primary polydipsia in albino male rats lasting about 6 hr. During this time Ss were hyperactive and drank as much as 2 to 3 times their normal daily intake. This irritative effect accounts for the polydipsia which sometimes follows lesions in the median eminence of the tuber cinereum of nephrectomized rats. Nonirritative lesions there did not cause primary polydipsia. After 6 hr. Ss with chronic diabetes insipidus produced by lesions in the median eminence did not show any effects of irritative lesions on water intake. In addition, when their urine output was suppressed these diabetic Ss drank almost exactly the amount of water needed to dilute a cellular thirst stimulus (hypertonic saline) to isotonicity and drank the same amount as controls after equivalent extracellular thirst stimuli (polyethylene glycol) suggesting that important drinking mechanisms are not located in the median eminence. (20 ref.)—*Journal abstract*.

9389. **Katz, Phyllis A., Albert, Janet, & Atkins, Margery.** (City Coll., City U. New York) **Mediation and perceptual transfer in children.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 268-276.—Investigates variables expected to influence verbal mediation of children's perceptual responses in 2 interrelated studies. In Exp. I, judgments of stimulus similarity made to systematically varying random form pairs were obtained from 60 1st and 6th grade children. The older Ss differentiated the forms more. On the basis of the 1st study, slide pairs of high, intermediate, and low simi-

larity were selected. 5 label conditions were introduced in a factorial design with 240 1st and 6th grade Ss. Age, stimulus similarity, and label condition were significantly associated with degree of perceptual differentiation. An Age \times Treatment interaction revealed that labeling training had more pronounced perceptual effects for the younger Ss. These effects varied differentially with the level of stimulus similarity employed. (20 ref.)—*Journal abstract*.

BRAIN STIMULATION

9390. Maekawa, K. & Rosina, A. (Max Planck Inst. of Psychiatry, Munich, W. Germany) **Caratteristiche della trasmissione sinaptica nel nucleo genicolato laterale del gatto.** [Observations on synaptic transmission in the lateral geniculate nucleus of the cat.] *Rivista di Neurobiologia*, 1968(Oct), Vol. 14(4), 626-631.—Studied the activity evoked in the lateral geniculate neurons of the cat by electrical stimulation of the optic nerve and by diffuse light stimulation. Intracellular recordings were obtained in nearly 100 neurons. The electrical stimulation of the optic nerve emits monosynaptic excitatory postsynaptic potentials (EPSP) which can reach the threshold for the cellular discharge. Supra- and subthreshold EPSPs were generally followed by a long inhibitory postsynaptic potential (IPSP) of probable recurring nature. The possible interrelationships between EPSPs and IPSPs are illustrated. Light stimulation could also evoke isolated IPSPs.—*A. M. Farfaglia*.

9391. Tatton, W. & Crapper, D. (U. Toronto, Ontario, Canada) **A marking method for stimulating electrode locations.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 621-622.—Describes a simple method for localization of stimulating locations in the CNS, using adult cats. The method utilizes radio frequency current to destroy the blood-brain barrier locally without coagulating the tissue and allows trypan blue to extravasate into the marking site from the intravascular compartment. (French summary)—*Journal summary*.

Chemical Stimulation

9392. Beckman, Alexander L. (U. California, Santa Barbara) **The effect of intrahypothalamic application of norepinephrine on behavioral and physiological thermoregulation in the rat.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3884.

9393. Bhargava, V. K. & Meldrum, B. S. (Neuropsychiatric Research Unit, Carshalton, England) **The strychnine-like action of curare and related compounds on the somatosensory evoked response of the rat cortex.** *British Journal of Pharmacology*, 1969(Sep), Vol. 37(1), 112-122.—Applied drugs to the cerebral cortex of male Sprague-Dawley rats anesthetized with pentobarbitone and changes measured in the somatosensory primary evoked response. Computer-derived averages of 32 consecutive responses yielded stable and consistent measurements of the potential changes comprising the evoked response, and comparable records from the opposite (non-drug treated) cortex provided an essential control for systemic actions of the drug. Modifications produced by curare and strychnine were indistinguishable. Observations of the drug reaction are consistent with an action of curare and strychnine on

an intracortical cholinergic inhibitory system, however, other possibilities including a "non-specific excitatory action" cannot be excluded. (28 ref.)—*Journal abstract*.

9394. Bobo, E. Gary & Bonvallet, M. **Réponses associées incrémentales corticales et oculaires d'origine amygdallienne.** [Associated incrementing cortical and ocular responses of amygdaloid origin.] *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 473-487.—Investigated previous findings by M. Bonvallet and E. G. Bobo (see PA, Vol. 45:Issue 6) that stimulation of amygdala can elicit discharges from the ocular accommodative fibers together with arousal and mydriasis. The accommodative impulses were recorded from the short ciliary nerves (SCN) of 31 cats with high spinal transection maintained under flaxedil (gallamine). It is concluded from stimulation of the magnocellular part of the basal amygdaloid nucleus, the longitudinal association bundle, and the stria terminalis that (a) the stria terminalis is the afferent limb of a circuit activating the basal nucleus, (b) the studied responses are mediated by the ventral amygdalofugal pathway, and (c) the ultimate relay of the amygdaloid projections is probably located in the pruberul field. Findings are correlated with histological, electrophysiological, and functional data. (42 ref.)—*English summary*.

9395. Bonvallet, M. & Bobo, E. Gary. **Contrôle de l'accommodation oculaire par l'amygdale et par les corps striés.** [Control of ocular accommodation by the amygdala and the corpus striatum.] *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 461-472.—Studied the effects of stimulation of amygdala and corpus striatum upon the tonic electrical activity of the parasympathetic neurons controlling ocular accommodation in 38 cats with the spinal cord divided at C₁ or T₁-T₂ and maintained under flaxedil (gallamine). Responses were recorded from the short ciliary nerves and a subthalamic relay station between the forebrain and the Edinger-Westphal nucleus. Data suggest that the ultimate relay of the pallido- and amygdalofugal projection to the Edinger-Westphal nucleus is located in the pruberul field. Oculomotor pathways descending from various cerebral areas converge on the same region which may be an integrating center for extra- and intraocular motor control. Results show that a part of the supranuclear control of accommodation may be exerted by the amygdala and the striatum. (35 ref.)—*English summary*.

9396. Carew, Thomas J., Crow, Terry J., & Petrinovich, Lewis F. (New York U., Medical School) **Lack of coincidence between neural and behavioral manifestations of cortical spreading depression.** *Science*, 1970(Sep), Vol. 169(3952), 1339-1342.—Questions the assumption that the presence of hypesthesia is necessarily indicative of the presence of cortical spreading depression (CSD). The EKG and slow-potential change were recorded during CSD in 6 male hooded Long-Evans rats, and it was found that hypesthesia remained long after the cortex recovered from neural depression. Hypesthesia, therefore, is an unreliable indicant of CSD; if CSD is used as a research tool, neural activity must be monitored. These data offer a special problem for memory transfer studies.—*Journal abstract*.

9397. Grimm, R. J., Frazee, J. G., Kawasaki, T., & Savić, M. (Good Samaritan Hosp. & Medical Center, Portland, Ore.) **Cobalt epilepsy in the squirrel mon-**

key. Electroencephalography & Clinical Neurophysiology, 1970(Nov), Vol. 29(5), 525-528.—Placed 1.2-3.5 mg. of cobalt powder on the piaarachnoid surface of somatosensory cortex of 10 monkeys and injected 1 monkey with 20 mg. of cobalt via cannula into the hippocampal cortex. It was found that small amounts of cobalt powder generated paroxysmal activity for 48-72 hr. in the unanesthetized squirrel monkey cortex. Using halothane anesthesia with a rapid recovery time, paroxysmal activity may begin within 30 min. of cobalt application. Discharges can be segregated by wave form, frequency, and pattern into 4 clearly identifiable phases. Illustrations of these phases are given. As good signal-to-noise characteristics of paroxysmal events are obtainable, this model of focal epilepsy in squirrel monkeys is open for quantification techniques. (French summary)—*Journal summary*.

9398. Huston, Joseph P. & Bureš, Jan. (Czechoslovak Academy of Sciences, Inst. of Physiology, Prague) **Drinking and eating elicited by cortical spreading depression**. *Science*, 1970(Aug), Vol. 169(3946), 702-704.—Administered single waves of unilateral and bilateral cortical spreading depression to 12 hooded male rats by electrophoretic injection of potassium ions into the occipital cortices. Aggressive and stereotyped eating, drinking, and exploratory behavior were elicited by unilateral and bilateral spreading depression. Onset of the elicited behaviors varied among Ss from 4-8 min. after injection of the ions. Direct activation of, or rebound from, inhibition of subcortical motivational mechanisms may be responsible for the effects.—*Journal abstract*.

9399. Morris, H., Walker, R., & Margules, D. L. (Wyeth Lab., Philadelphia, Pa.) **A cannula of variable depth for chemical stimulation of the brain**. *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 521-523.—Describes a cannula with capability to treat various brain sites below the original site, and to return repeatedly to precisely the same brain region. This allows crystalline or liquid drugs to be directly applied to a series of fixed brain sites, maps to be made of drug induced changes in the brain, and sites of optional activity to be localized. (French summary)—*Journal summary*.

9400. Mutani, R., Doriguzzi, T., Fariello, R., & Furlan, P. M. (U. Torin, Clinic for Nervous & Mental Illness, Italy) **L' "Irritazion" cronica del nucleo caudato: Effetti elettroencefalografici e comportamentali**. [Chronic irritation of the caudate nucleus: Electroencephalographic and behavioral effects.] *Acta Neurologica*, 1969(Jan), Vol. 24(1), 78-84.—In unanesthetized, unrestrained cats the effects of chronic introduction of cobalt powder into the head of the caudate nucleus were studied. If the introduction was monolateral, a slowing of the EEG pattern on the anterior cerebral leads, ipsilaterally to the "irritated" caudate, appeared. If the introduction was bilateral, the EEG slowing was bilaterally synchronous and symmetric; moreover, behavior changes appeared consisting of an important decrease in the spontaneous and provoked motility of the S. Results confirm the "inhibitory" function played by the caudate nucleus and are discussed in relation to the modern findings on the caudate physiology. (23 ref.)—*English summary*.

Electrical Stimulation

9401. Atrens, Dale M. (American U., Beirut,

Lebanon) **Reinforcing and emotional consequences of electrical self-stimulation of subcortical limbic-forebrain**. *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1461-1471.—Investigated the anatomical distribution of electrical self-stimulation in the subcortical limbic-forebrain of 88 male hooded Long-Evans rats using a number of different response measures. These included lever-press rates on continuous and variable interval reinforcement, as well as latencies to initiate and terminate stimulation in a shuttle-box. Self-stimulation at many limbic sites was found to produce striking increases in emotionality. The anatomical distribution of these stimulation-induced emotionality changes closely parallels that described in recent lesion studies. In contrast, while self-stimulation may be obtained in all major subdivisions of the subcortical limbic-forebrain, the differences in performance appear to be as great within these subdivisions as between them. With respect to reinforcement, this area may, therefore, be considered a heterogeneous functional unit throughout which stimulation is rewarding although much less so than in the hypothalamus. The satiation tests and rate-intensity functions reported indicate that, apart from the quantitative difference, limbic stimulation is motivationally homologous with stimulation of the hypothalamus. (43 ref.)—*Journal abstract*.

9402. Ball, Gordon G. (Rockefeller U.) **Hypothalamic self stimulation and feeding: Different time functions**. *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1343-1346.—Investigated the duration of stimulation necessary to elicit feeding, the duration preferred for self-stimulation, and the relation between these 2 in Charles River Sprague-Dawley rats. Ss which fed to electrical stimulation of the hypothalamus also self-stimulated at the same current level. However, there was minimal overlap between the train length that Ss preferred in the self-stimulation situation and that required to produce feeding. The evidence suggests that the rewarding properties of the stimulation decline as the apparent hunger builds up. The data are incompatible with an interpretation of the reinforcing properties of self-stimulation being positively correlated with hunger, consummatory responses, or fixed action patterns. (16 ref.)—*Journal abstract*.

9403. Black, William C. & Cooper, Barrett R. (Indiana U., Medical Center, Indianapolis) **Reduction of electrically-rewarded behavior by interference with monamine synthesis**. *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1405-1409.—Evaluated with 2 behavioral techniques the effects of blockade of brain catecholamines (CA) and brain serotonin (5-HT) synthesis upon electrically-rewarded behavior in 8 male Long-Evans rats. Comparison of free-operant responding in 12 additional unoperated Ss and a rate-free measure suggests that interference with CA synthesis has a minimal effect on specific task performance, the effects being preponderantly exerted on an adrenergic motivational substrate. Interference with 5-HT synthesis produced no effect on performance or motivation. (20 ref.)—*Journal abstract*.

9404. Colavita, Francis B. (U. Pittsburgh) **The reticular formation and avoidance conditioning**. *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1423-1426.—Trained 7 adult cats to make a double grill-box shock-avoidance response with direct electrical stimulation of the inferior colliculus serving as a CS. Near perfect transfer of the response was shown when the stimulation was delivered to an untrained electrode site

in the mesencephalic reticular formation. Other animals trained with reticular stimulation as a CS failed to show any transfer of the avoidance response when tested with electrical stimulation of the inferior colliculus. Avoidance responses acquired with stimulation of the inferior colliculus as the CS failed to transfer to either the superior colliculus or to area A_1 of the cortex. These results were interpreted as suggesting that the mesencephalic reticular formation is involved in some aspect of the conditioning process. (22 ref.)—*Journal abstract.*

9405. Gersch, Will & Goddard, G. V. (Stanford U., Medical School, Div. of Neurology) **Epileptic focus location: Spectral analysis method.** *Science*, 1970(Aug), Vol. 169(3946), 701-702.—Describes a spectral analysis technique for locating the site of an epileptic focus in the cat brain with the use of multielectrode data, obtained during a generalized seizure. Data, indicating widespread appearance of epileptic activity, did not lend itself to conclusive analysis by conventional means. 3 channels of data were examined. 1 channel is said to drive the other channels if the 1st channel explains or accounts for the linear relation between the other 2 over a frequency interval corresponding to the interval of greatest energy concentration. The method of analysis involved computation of the coherence and partial coherence between data from all electrode pairs.—*Journal abstract.*

9406. Gray, J. A. & Ball, G. G. (Rockefeller U.) **Frequency-specific relation between hippocampal theta rhythm, behavior, and amobarbital action.** *Science*, 1970(Jun), Vol. 168(3936), 1246-1248.—Describes a simple learning situation in which the frequency of the hippocampal theta rhythm in freely moving male Sprague-Dawley rats varied predictably in relation to behavior. The theta rhythm was driven by electrical stimulation of the medial septal area at frequencies within the theta range. The threshold for septal driving was lowest at that frequency which 7 Ss displayed in response to frustrative nonreward; the driving threshold was selectively raised at this frequency, in 2 groups of 5 Ss, by sodium amobarbital. It is suggested that the behavioral effects of amobarbital are due to a disruption of the theta frequency normally displayed in response to nonreward.—*Journal abstract.*

9407. Hine, Bromfield & Paolino, Ronald M. (Purdue U.) **Retrograde amnesia: Production of skeletal but not cardiac response gradient by electroconvulsive shock.** *Science*, 1970(Sep), Vol. 169(3951), 1224-1226.—108 male Holtzman rats, given a single ECS immediately after but not 60 sec. after an aversive conditioning trial, exhibited behavioral retention deficits 24 hr. later in a 1-trial passive avoidance task. In contrast to these differential performance deficits, similar heart-rate changes, indicative of fear retention, were seen in punished Ss irrespective of the time of delivery of the shock. Data suggest retention of a generalized fear to the training experience that was not revealed by the behavioral measure. The potential usefulness of concomitant behavioral and physiological response assessment in consolidation research is discussed.—*Journal abstract.*

9408. Hupka, Ralph B. (California State Coll., Long Beach) **Electrical stimulation of the septum and hypothalamus as conditioned stimuli in the rabbit.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1355-1363.—Investigated the effect on the onset of CR performance, the rate of CR acquisition, and the rate of

differentiation of the rabbit nictitating membrane response when the CS consisted of electrical stimulation of the brain (ESB) in rewarding, aversive and neutral septal and hypothalamic locations. During 2 days of acquisition training 36 male and female naive New Zealand white rabbits received 100 daily trials of Pavlovian conditioning to 2 electrode loci. 4 days of differentiation training followed acquisition and consisted of nonreinforcement of 1 locus (CS-) while the other locus continued to be reinforced (CS+) by the eyeshock serving as the UCS. Onset of CR performance was faster in rabbits receiving the CS in 2 rewarding brain loci than in 2 neutral or aversive loci. Asymptotic CR performance was attained 1st by rabbits receiving the CS in 2 rewarding loci, 2nd by neutral CSs, and 3rd by aversive CSs. The motivational properties of the 2 CSs interacted to determine CR performance, such that onset of CR performance and CR acquisition rate were faster for ESB combinations which included a neutral locus. The fastest rate of differentiation occurred when CS+ and CS- consisted of stimulation of an aversive locus and neutral locus, respectively. Differentiation was generally attained more quickly when CS- was a neutral locus. Differentiation was impeded and led to a loss of differentiation between days when 1 of the loci was rewarding. (26 ref.)—*Journal abstract.*

9409. Paolino, Ronald M. & Levy, Harold M. (Purdue U.) **A cannula assembly for inducing cortical spreading depression in free-moving animals.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1499-1500.—Describes a simple cannula system which permits application of potassium chloride solution directly onto the dura of the free-moving rat. This system should be useful in situations where handling and stressing of animals must be minimized and where timing of induction of cortical spreading depression is critical.—*Journal abstract.*

9410. Storck, Lauren E. (City Coll., City U. New York) **Topologic and temporal characteristics of lateral geniculate projections in the cat.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-B), 1575.

9411. Trowill, Jay A. & Hynek, Kathleen. (U. Massachusetts) **Secondary reinforcement based on primary brain stimulation reward.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 715-718.—Trained 15 rats to run in a straight runway for rewarding brain stimulation (ESB). A consistent color of goal box—ESB reward pairing—existed during runway training. When subsequently tested in a T maze where the goal box associated with ESB was placed on the initially non-preferred side, Ss learned to run to that side with only the goal box color as the reward. Results demonstrate that secondary reward can be based on ESB as a primary reward. Results appear to challenge the view that drive is necessary for the demonstration of secondary reward.—*Journal abstract.*

9412. Vergnes, M. & Karli, P. (National Center of Scientific Research, Lab. of Neurophysiology, Strasbourg, France) **Déclenchement d'un comportement d'agression par stimulation électrique de l'hypothalamus médian chez le rat.** [Elicitation of mouse-killing behavior by electrical stimulation of medial hypothalamus in the rat.] *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1427-1430.—Elicited interspecific aggressive behavior in natural nonkiller adult male Wistar rats by electrical stimulation of various sites located in the ventromedial and dorsomedial hypothalamus. Intense emotional reactions and flight re-

sponses were regularly associated with the experimentally induced mouse-killing behavior. Emotional reactions and flight responses without any aggressive behavior were elicited from other sites located within the same hypothalamic region. (21 ref.)—*English summary.*

9413. Wayner, M. J., Cott, A., & Greenberg, I. (Syracuse U., Brain Research Lab.) **Stimulus bound nitrogen licking evoked during electrical stimulation of the lateral hypothalamus.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1455-1460.—Obtained an analysis of data from studying 3 Sprague-Dawley male albino rats indicating that it is possible to evoke stimulus bound licking for nitrogen puffs during electrical stimulation of the lateral hypothalamus (LH). However, Ss were very finicky about nitrogen licking under these conditions; the effect was difficult to obtain and different from the phenomenon observed following water deprivation when it occurred readily. Some evidence indicates that LH stimulation increased an S's sensitivity to the aversive qualities of nitrogen licking. Additional anecdotal data on poststimulation effects are presented.—*Journal abstract.*

9414. Wester, Knut. (U. Oslo, Inst. of Neurophysiology, Norway) **Habituation to electrical stimulation of the thalamus in unanesthetized cats.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 52-61.—Studied electrical high frequency stimulation of widely separate thalamic areas in 29 unanesthetized, freely moving cats. Orienting responses were yielded which looked identical at the 1st presentation of the stimulus, but marked differences appeared when it was repeated. Ss soon habituated to stimulation of a lateral group of nuclei, consisting mainly of the sensory relay nuclei. Orienting responses elicited from the intralaminar nuclei were highly resistant to such habituation, whereas a dorsomedial group took an intermediate position. Suggested explanations of the observed differences are: (a) stimulation of the lateral nuclear group produces some kind of sensory experience of no signal value, and the S therefore soon ceases to respond; (b) stimulation of the intralaminar group either directly activates neurons involved in an arousal or orienting mechanism, or it is negatively or positively reinforcing, and (c) the prolonged habituation observed in the dorsomedial group may be explained by the negatively reinforcing properties of such stimulation. (French summary) (21 ref.)—*Journal summary.*

9415. White, Silas D. (Syracuse U.) **The effects of stimulus intensity, water deprivation, and prior water ingestion on drinking elicited by electrical stimulation of the lateral hypothalamus in rats.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3900.

9416. Wishart, Thomas B. & Mogenson, Gordon J. (U. Western Ontario, London, Canada) **Reduction of water intake by electrical stimulation of the septal region of the rat brain.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1399-1404.—Implanted chronic, bipolar stimulating electrodes in the same region of the septum of 10 male hooded rats in which lesions have been shown to produce hyperdipsia. Intermittent electrical stimulation of the septum administered over a 24-hr period resulted in a decrease in water intake. Septal stimulation during a 1-hr session following 23 hr. of water deprivation also reduced water intake. The stimulation did not reduce the rate of lapping at the water spout but rather shortened

the period to the termination of drinking. Results are consistent with the hypothesis that the septum is part of an inhibitory system for water intake. It is suggested that the septum has an inhibitory influence on the lateral hypothalamic drinking system, either mediated directly or mediated indirectly via the ventromedial hypothalamus. (21 ref.)

9417. Sharkawi, Mahmoud & Goldstein, Avram. (U. Montreal, Quebec, Canada) **Antagonism by physostigmine of the "running fit" caused by levorphanol, a morphine congener, in mice.** *British Journal of Pharmacology*, 1969(Sep), Vol. 37(1), 123-128.—Drugs of the morphine type caused a stereotyped running fit in male Swiss-Webster mice. The intensity and duration of this response were related to dose. Measurement of this phenomenon served as a good method for the quantitative comparison of drugs of this type and for the study of their antagonists. Intracerebral injection of physostigmine antagonized the running fit induced by a wide range of doses of levorphanol. Results are consistent with the hypothesis that drugs of the morphine type act by retarding the release of acetylcholine at some central cholinergic synapses.—*Journal abstract.*

ELECTRICAL ACTIVITY

9418. Bathien, Nguyen. (St. Antoine Medical School, Physiology Lab., Paris, France) **Réflexes spinaux chez l'homme et niveaux d'attention.** [Human spinal reflexes and attention levels.] *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 32-37.—Recorded human spinal reflexes of 9 Ss during tests which induced various levels of attention. Tests were (a) tracing a circle using an XY table (XY); (b) finding and counting CVC sequences in an unknown language (Lett); (c) recognition of a word spelled backwards (Epel); (d) mental addition (Add); (e) mental multiplication (Mult); and (f) finding a combination of the numbers 1, 2, 4, and 8 adding up to a 2-figure number (IBM). The Hoffmann (H) reflex, soleus tendon (TSol) reflex, biceps tendon (TBi) reflex, and the polysynaptic nociceptive reflex induced by electrical stimulation of cutaneous Group III afferents (IIIBi) were studied. Analysis of results indicate that (a) the IBM test did not significantly modify any of the reflexes, (b) the Epel test facilitated the TSol, (c) the Mult test facilitated the TSol and TBi, (d) the Add test produced an inhibition of the IIIBi, and (e) the XY and Lett tests modified all reflexes. It is concluded that the facilitation of γ motoneurons is obtained for a low level of activation, that an inhibition of the flexor reflex afferents is obtained for a higher level, and that facilitation of the H reflex, produced by the highest levels of activation, indicates the lower sensibility to χ motoneurons to reticular discharge.—*English summary.*

9419. Berkinblit, M. B., Vvedenskaya, N. D., Gnedenko, L. S., & Kovalev, S. A. (Inst. on Problems of Information-Transmission, Moscow, USSR) **Issledovanie na EVM osobennosti provedeniya nervnogo impul'sa po voloknam s raznoi krutiznoi rasshireniya.** [Electronic computer study of the features characterizing conduction of the nerve impulse along fibers with various rates of increase in diameter.] *Biophysika*, 1970(Nov), Vol. 15(6), 1081-1089.—Reports results of a study on the influence of sharp and gradual

changes in diameter of the nerve fiber on propagation of the nerve impulse. Besides determination of the critical diameter, quantitative determinations were procured for changes in nerve impulse amplitude, velocity, and form. Included is a mathematical formulation of the problem and the proposed method of solution, based on the Hodgkin-Huxley model. Abrupt changes in nerve fiber (greater than 5.5 times) produced nerve impulse blockade. A smaller ratio of change, but 1 close to the critical, produced a sharp drop in amplitude of action potential (to 20-30% of the initial value) and a sharp reduction of conduction velocity (from 18 to 2 m/sec). At the same time, action potential form underwent marked changes. With decrease in the gradient of diameter increase, nerve impulse conduction was very much facilitated. (English summary)—*I. D. London.*

9420. Bruner, Jan & Kennedy, Donald. (Stanford U.) **Habituation: Occurrence at a neuromuscular junction.** *Science*, 1970(Jul), Vol. 169(3940), 92-94.—Reports that at the neuromuscular junctions between the motor giant axon and fast flexor muscle fibers in crayfish, stimulation at frequencies of 1/min produced a large decline in the amplitude of excitatory junctional potentials. Recovery (dishabituation) was brought about by increases in stimulus frequency, which triggered a potentiation process; at still higher frequencies, a 2nd form of depression intervened. The last process appeared to be due to depletion of transmitter; the 1st probably depended upon electrical changes in presynaptic terminals. Because of the interactions between the 3 processes, the junctions displayed the properties of habituation and dishabituation usually associated with complex central nervous networks.—*Journal abstract.*

9421. Cohn, Robert. (National Naval Medical Center, U.S. Naval Hosp., Bethesda, Md.) **Bilateral simultaneous summated cortical responses to delayed bilateral and single median nerve stimulation.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 612-615.—Applied known electrical pulses synchronously, and with variable time delays, to each median nerve simultaneously and observed the summated cortical responses from homologous scalp derivations in over 100 Ss. Single and bilateral electrical stimulation of the median nerves show evidence of hemispheric interaction by (a) alterations of summated responses contralateral to the delayed stimulus, and (b) the appearance of a new wave on the delayed side, with bilateral stimulation, and on the same side in single nerve stimulation. This new wave has a delay in major peaking of 2-4 msec. (French summary)—*Journal summary.*

9422. Ghelarducci, B., Pisa, M., & Pompeiano, O. (U. Pisa, Inst. of Human Physiology, Italy) **Transformation of somatic afferent volleys across the prethalamic and thalamic components of the lemniscal system during the rapid eye movements of sleep.** *Electroencephalography & Clinical Neurophysiology*, 1970(Oct), Vol. 29(4), 348-357.—Implanted electrodes in the medial lemniscus and the nucleus ventralis posterolateralis of the right side of 19 unrestrained, unanesthetized cats. A single shock of the left superficial radial nerve and the medial lemniscal electrode were used as stimuli. Responses from both electrodes and stimuli were studied during episodes of REM sleep. Results indicate that some part of the efferent activity giving rise to contractions of the limb musculature during REM sleep is

fed into the somatic sensory system, particularly the nucleus ventralis posterolateralis, where it interacts with the incoming somatic information filtered at dorsal column level. (French summary) (39 ref.)—*Journal summary.*

9423. Greenwood, Donald D. & Goldberg, Jay M. (U. British Columbia, Vancouver, Canada) **Response of neurons in the cochlear nuclei to variations in noise bandwidth and to tone-noise combinations.** *Journal of the Acoustical Society of America*, 1970(Apr), Vol. 47(4, Pt. 2), 1022-1040.—Performed experiments in which bands of noise were widened (arithmetically) around the best frequencies of single units in the cochlear nuclear complex of 12 cats. 2 types of effect were studied: (a) summation, in which increasing bandwidth from narrow widths (constant spectrum level) produced increases in firing; and (b) suppression, in which increasing bandwidth beyond the range in which summation occurred produced systematic reductions in firing. In monotonic units, in which summation was more readily observed, increasing bandwidth was approximately equivalent to increasing the spectrum level of a narrow band of constant width; the subsequent suppression at larger bandwidths ranged from slight to very marked. The bandwidths at which summation ceased and suppression began, decreased somewhat at higher spectrum levels and were similar in width on a log scale for units of differing best frequency but, for several reasons, these turnover bandwidths were not readily interpretable. Tone-noise combination stimuli were also used to study some units, and it was possible to repeat and extend earlier observations by D. D. Greenwood and N. Maruyama to the effect that—depending on intensity—a band of noise centered at 1 frequency may eliminate, i.e., mask, a unit's response to a tone at a different frequency either (a) by inhibiting that response, or (b) activating the unit itself so that the tone has no additional effect. (21 ref.)—*Journal abstract.*

9424. Halas, Edward S., Beardsley, James V., & Sandlie, Mary E. (U. North Dakota) **Conditioned neuronal responses at various levels in conditioning paradigms.** *Electroencephalography & Clinical Neurophysiology*, 1970(May), Vol. 28(5), 468-477.—Implanted monopolar macroelectrodes in 7 chronic and 36 acute cats. Brain sites investigated were the medulla and mesencephalic reticular formation, diffuse thalamic system, cochlear nucleus, inferior colliculus, brachium of the inferior colliculus, medial geniculate, and the auditory cortex. All Ss were given classical conditioning, consisting of a tone paired with a mild shock to 1 hind paw. The chronic Ss were given instrumental avoidance conditioning. Results indicate that conditioned neuronal responses develop sequentially, starting with the reticular formation and progressing upward from the cochlear nucleus to the auditory cortex. Results are statistically significant for both classical and instrumental conditioning. Control experiments for general bodily movements, alerting or arousal, and pseudoconditioning were negative. (French summary)—*Journal summary.*

9425. Humphry, Donald R. (National Inst. of Health, Lab. of Neural Control, Bethesda, Md.) **A chronically implantable multiple micro-electrode system with independent control of electrode positions.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 616-620.—Describes a chronically implantable, multiple microelectrode system for use with

unanesthetized animals. The system may be left on the S's head for extended periods of time, yet its parts can be decoupled so that electrodes are easily changed. The device is comparatively small, provides for independent control of several closely spaced microelectrodes and is designed so that a single implant allows for sets of electrode penetrations over a relatively large expanse of neural tissue. The system has been used, with excellent results, for recording simultaneously from several individually selected neurons in the motor cortex of an unanesthetized monkey. (French summary) (19 ref.)—*Journal summary*.

9426. Jeannerod, M. & Putkonen, P. T. (U. Lyon, Medical School, France) **Oculomotor influences on lateral geniculate body neurons.** *Brain Research*, 1970, Vol. 24(1), 125-129.—Investigated the relations between the eye movements and vision in a study of the lateral geniculate body (LGB). LGB neurons were recorded in 10 encéphale isolé cats. The eyes of the Ss were covered with a mask which was lit from the inside by a lamp which when lit formed a random textured pattern. Atropine was used to dilate the pupils of the Ss. Direct electrical stimulation of the vestibular nuclei was also used to produce a reliable and long lasting after-nystagmus. Results "show that during eye movements of vestibular origin, definite changes in activity occur in a significant population of geniculate neurons, independently of visual input."—S. Knapp.

9427. Kamenskaya, M. A. & Kirzon, M. V. (Moscow State U., USSR) **Analiz protsessy utomleniya izollirovannoi skeletnoi myshtsy lyagushki s pomoshch'yu kratkovremennoi tetanizatsii raznoi chasty.** [Analysis of the process of fatigue in isolated frog skeletal muscle by means of short-term tetanization of various frequency.] *Fiziologicheskii Zhurnal SSSR*, 1969(Nov), Vol. 55(11), 1369-1377.—Used isolated frog sartorius muscle as material for a microelectrode study, utilizing (a) frequencies of 20-300 cps of tetanic stimulation of the sciatic nerve, and (b) extracellular recordings of action and end plate potentials from the fibers of the muscle. Several stages of fatigue were disclosed during which a block of neuromuscular transmission occurred and intensified. The electrical reaction of fatigued muscle fiber was characterized by (a) the presence of a preliminary period of summation of end plate potential, necessary for the emergence of action potential; (b) the transformation of action potential rhythm; and (c) the appearance of variations in the amplitude of action potential. Therefore, electrical reaction was formed by the interaction of 2 basic processes—summation of excitation and transformation of action-potential rhythm. As in myographic experiments, in intracellular registration of potentials a level of optimal frequencies (50-70 cps) was distinguished. For a response at optimal frequency the following were characteristic: (a) a shorter period of summation of end plate potential than in low frequencies, and (b) a lesser degree of transformation of action potential rhythm compared with the reaction to high frequencies. (English summary) (24 ref.)—I. D. London.

9428. Karmos, G., Martin, J., Kellényi, L., & Bauer, M. (U. Pécs, Medical School, Hungary) **Constant intensity sound stimulation with a bone conductor in the freely moving cat.** *Electroencephalography & Clinical Neurophysiology*, 1970(Jun), Vol. 28(6), 637-638.—Bone conductors used in human audiology are recommended for stabilizing the auditory input in

behavioral experiments. If the sound is given through a bone conductor fixed on the head of a cat bearing chronically implanted electrodes, the factors modulating the auditory input of an air-conducted sound stimulus (room acoustics, middle ear muscles) can be excluded. As witnessed by the cochlear microphonic responses continuously recorded with chronically implanted round window electrodes, the auditory input remained unaltered even during vigorous motor activity. (French summary)—*Journal summary*.

9429. Krnjević, K., Reiffenstein, R. J., & Silver, Ann. (McGill U., Montreal, Quebec, Canada) **Inhibition and paroxysmal activity in long-isolated cortical slabs.** *Electroencephalography & Clinical Neurophysiology*, 1970(Sep), Vol. 29(3), 283-294.—Compared the effectiveness of inhibition in small, long-isolated (8-48 wk.) slabs of suprasylvian cortex and in intact control areas of cats, using extra- and intracellular recordings. Glutamate-induced discharges of neurons were inhibited by stimulation of the cortical surface. The inhibitory pause was longer than normal, but the threshold stimulus was not significantly altered. Membrane potentials could be recorded only transiently. Inhibitory postsynaptic potentials were readily evoked by surface stimulation, but there was some indication of a reduced inhibitory conductance change. It is concluded that the normal inhibitory mechanisms are substantially preserved in long-isolated slabs and that the tendency to seizure discharges cannot be ascribed to total loss of inhibitory control. The incidence and activity of neuroglia, the absence of unit spikes and discharges, and the effect of γ -aminobutyric acid are noted and discussed. (French summary) (31 ref.)—*Journal summary*.

9430. Kuhnt, U. & Creutzfeldt, O. D. (Max Planck Inst. of Psychiatry, Munich, W. Germany) **Decreased post-synaptic inhibition in the visual cortex during flicker stimulation.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 79-82.—Investigated the effects of changing the intensity and the repetition rate of flash stimuli on the postsynaptic cellular response. Diffuse flash stimuli at high intensity and low repetition frequency (below 2/sec) evoked in most neurons of Area 17 of the cat an inhibitory postsynaptic potential (IPSP) which might be preceded by an excitatory postsynaptic potential (EPSP). At flash rates above 2-4/sec, the amplitude of the IPSP decreased and disappeared completely above stimulus frequencies of 10-15/sec. At the same time, the EPSP was unmasked and appeared as a long compound EPSP of about 50-msec duration. Amplitude of the EPSP decreased at stimulus frequencies above 10-12/sec. This was explained by the decreased spike rate/flash of the afferent fibers in the optic radiation. It is suggested that the decreased inhibition in the visual cortex during repetitive flicker stimulation above 5-10/sec is related to the increased epileptic activity of certain epileptic patients during flicker stimulation. (German summary)—*Journal summary*.

9431. Lehtinen, Lauri O. & Bergström, Lea. (U. Helsinki, Lapinlahti Hosp., Finland) **Naso-ethmoidal electrode for recording the electrical activity of the inferior surface of the frontal lobe.** *Electroencephalography & Clinical Neurophysiology*, 1970(Sep), Vol. 29(3), 303-305.—Describes a nasoethmoidal electrode for recording the activity of the basal aspect of the frontal lobe. Records with this electrode in 5 healthy Ss and 48 epileptic patients are described. The value of this

method in recording focal activity from the frontal lobe is reviewed. In 25% of the patients investigated more information concerning brain activity was obtained by this method. (French summary)—*Journal summary*.

9432. Macadar, O., Roig, J. A., Monti, J. M., & Budelli, R. (U. Republic, Lab. of Neurophysiology, Montevideo, Uruguay) **The functional relationship between septal and hippocampal unit activity and hippocampal theta rhythm.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1443-1449.—Studied the correlation between septal and hippocampal unit activity and hippocampus EEG in 40 unanesthetized curarized male Wistar rats. Extracellular recordings were statistically analyzed in order to obtain the time interval histograms and auto- and cross-correlograms. During the induction of a hippocampal theta rhythm by sensory stimulation or physostigmine injection the septal units showed a bimodal time interval histogram. The autocorrelograms of septal and hippocampal unit activity and the cross-correlograms between units and from them with the hippocampal EEG showed 4-6 waves of decreasing amplitude in 1-sec interval. The autocorrelograms showed serial dependence. LSD-25 abolished the hippocampal rhythmic activity. During the control period as well as after LSD-25 treatment in physostigmine injected Ss there was a significantly smaller number of spikes in each septal burst. Scopolamine and pentobarbitone disorganized septal and hippocampal activity. (16 ref.)—*Journal abstract*.

9433. McCarley, Robert W. & Hobson, J. Allan. (Harvard Medical School, Boston, Mass.) **Cortical unit activity in desynchronized sleep.** *Science*, 1970(Feb), Vol. 167(3919), 901-903.—Reports that bursts of unit firing associated with surface positive EEG waves and REMs account for the mean increase in discharge rate in desynchronized sleep over that of the synchronized phase. Firing rate begins to change toward the value it will assume in desynchronized sleep in the minute before the usual electrographic criteria of desynchronized sleep are present. (17 ref.)—*Journal abstract*.

9434. Naitoh, P., Johnson, L. C., & Lubin, A. (U.S. Navy Medical Neuropsychiatric Research Unit, San Diego, Calif.) **Modification of surface negative slow potential (CNV) in the human brain after total sleep loss.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 17-22.—Investigated the effects of total sleep deprivation on the contingent negative variation (CNV) and the utility of Hotelling's T^2 in comparing 2 CNVs. CNV was studied under base-line, total sleep deprivation, and recovery conditions in 8 Ss. Warning stimulus (S1) was a click, followed in 4.5 sec. by the imperative stimulus (S2), which was a set of flashes. During base line all Ss developed the CNV during the 4.5-sec foreperiod. 1 night of sleep loss decreased the CNV, and 2 nights of sleep loss abolished the CNV. The CNV wave was examined in 3 ways: (a) the univariate 0-mu t test which was applied repeatedly at various points during the 4.5-sec foreperiod, (b) the multivariate 0-mu Hotelling T^2 , and (c) the correlation between paired CNVs. The Hotelling T^2 shows the loss of the CNV during total sleep deprivation. (French summary) (20 ref.)—*Journal summary*.

9435. Nozdrachëv, A. D., Bezenkina, G. I., & Efimova, N. I. (Pavlov Inst. of Physiology, Leningrad, USSR) **Provodyashchie puti kaudal'nogo bryzhechnogo simpaticeskogo gangliya koshki.** [Conduction pathways of the caudal mesenteric sympathetic ganglion in

the cat.] *Fiziologicheskii Zhurnal SSSR*, 1970(Apr), Vol. 56(4), 543-551.—Of 47 adult Ss under urethane or chloralose-urethane narcosis, 10 were subjected to decentralization of the mesenteric sympathetic ganglion and others to spinal section in order to exclude the influence of anesthesia. The presence of 3 types of fibers was established in the conduction pathways of the ganglion. The 1st 2 types with a conduction velocity of excitation of 12.9 ± 1.36 and $3.31 \pm .39$ m/sec were represented without interruption both ipsi- and contralaterally. These fibers are probably afferent conductors or preganglionic fibers of intramural ganglia. The 3rd type of fiber displayed synaptic switchover in the ganglion. Synaptic delay came up to $12.8 \pm .98$ m/sec. in ipsilateral recording and 63.1 ± 15.9 m/sec. in contralateral. For the latter it was possible to conjecture the presence of internuncial neurons. The conduction velocity of excitation in the preganglionic fibers of this pathway was $2.85 \pm .16$ m/sec; in postganglionic fibers it was $1.49 \pm .04$ m/sec. The existence of "true peripheral reflex pathways" with closure in the ganglion is confirmed. These pathways were represented exclusively by synaptically interrupted fibers. Synaptic delay came up to $30-45 \pm .4$ m/sec. (English summary) (21 ref.)—*I. D. London*.

9436. Oniani, T. N., Molnár, P., & Naneishvili, T. L. (Inst. of Physiology, Tbilisi, USSR) **O prirode paradoxal'noi fazy sna.** [On the nature of the paradoxal phase in sleep.] *Fiziologicheskii Zhurnal SSSR*, 1970(May), Vol. 56(5), 689-695.—Cortico- and subcorticograms were recorded for 35 cats in natural sleep. The paradoxal phase of sleep is shown to be a complex phenomenon, divisible into 3 stages: (a) general activation or desynchronization of slow electrical activity in all the structures of the brain, unaccompanied by REMs or muscle twitches; (b) prevalence of hippocampal theta-rhythm, accompanied by REMs, muscle twitches, and arrhythmic heart rate and respiration; and (c) prevalence of hippocampal delta rhythm, accompanied by occasional REMs and the absence of muscle twitches. These stages have corresponding "neurophysiological subcortical mechanisms." The first is due to excitation of the reticular formation, the second, to excitation of the hypothalamic drive centers, and the third, to that of the hypothalamic centers, bringing about drive inhibition. (English summary)—*I. D. London*.

9437. Peters, Jon F., et al. (Louisiana State U., Medical School, New Orleans) **Response variables and magnitude of the contingent negative variation.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 608-611.—Tested 13 right-handed male medical students in a fixed foreperiod RT task. Results indicate that with a repetitive stimulus that is terminated by the manual response made to it, the contingent negative variations following the warning stimulus will be of greater magnitude than when a single stimulus, over which S has no control, is used. It is suggested that different levels of motivation are involved in these 2 conditions. (French summary) (22 ref.)—*Journal summary*.

9438. Petsche, H., Rappelsberger, P., & Trappl, R. (Austrian Academy of Sciences, Brain Research Inst., Vienna) **Properties of cortical seizure potential fields.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 567-578.—Mapped potential fields of seizure waves in the cortexes of 11 rabbits by means of a computer and studied the relationships

between their behavior and the graphoelements. Findings indicated that (a) elementary seizure waves are due to circular potential fields moving in the 10^{-1} m/sec range over the cortex; (b) more complex graphoelements are due to the superimposition of potential fields of different characteristics; and (c) usually, regular repetitive seizure waves are due to potential fields moving in the same direction. At cytoarchitectonic borderlines the potential fields became distorted and faded out or elicited other potential fields to arise in the contiguous area. Transverse vertical incisions in the cortex prevented the potential fields from transgressing the incision and from spreading along it. The polarity of the potential field that moves corresponded to the polarity of the more "peaked" phase (the steeper phase) of the graphoelement. In most cases the positive fields were the moving ones. The consequences of these observations for the nature of the EEG are discussed. (German summary) (26 ref.)—*Journal summary*.

9439. Porter, R., Lewis, M. McD., & Linklater, G. F. (Monash U., Clayton, Victoria, Australia) **A headpiece for recording discharges of neurons in unrestrained monkeys.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 91-93.—Describes a headpiece which can be attached conveniently and readily to a monkey's skull. The headpiece carries extensions that allow for fixation of S during recording sessions and a cylindrical receiver for the microdrive assembly which allows microelectrodes to be inserted into chosen brain structures while S is free to move and carry out manipulative tasks. (French summary)—*Journal summary*.

9440. Prince, D. A. & Futamachi, K. J. (Stanford U., Medical School, Div. of Neurology) **Intracellular recordings from chronic epileptogenic foci in the monkey.** *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 496-510.—Administered 2-4 intracortical aluminum hydroxide gel injections to 4 rhesus monkeys. Extra- and intracellular recordings were obtained from neurons of chronic alumina epileptogenic foci during focal epileptiform discharges. It was found that (a) Alterations in the frequency of spike discharge occurred during interictal surface epileptiform waves. (b) Spontaneously occurring slow membrane depolarizations and hyperpolarizations were closely associated with surface epileptiform waves. (c) Depolarizations generated bursts of spikes similar to those characteristically seen in extracellular recordings from the alumina focus. (d) Discharge patterns of involved neurons were similar qualitatively to those of acute epileptogenic foci, and (e) amplitudes of surface epileptiform discharges and intracellularly slow membrane events were smaller and the proportion of neurons involved in epileptogenesis was lower in the chronic focus. It is suggested that these differences may result from the more diffuse nature of the chronic alumina focus. Intracellular data are discussed in relation to proposed mechanisms of burst generation in neurons of the chronic epileptogenic focus. (French summary) (32 ref.)—*Journal summary*.

9441. Saunders, James C. (Monash U., Clayton, Victoria, Australia) **Cochlear nucleus and auditory cortex activity during threshold discriminations in cats.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 73-78.—Investigated the relationship between sensorineural activity and behavioral discriminations of acoustic stimuli in 2 experiments. Exp. I compared simultaneously the behavioral detection of 1

and 2 kcps tones of varying intensity with the amplitude of a frequency-following response in the cochlear nucleus in 3 cats. In Exp. II with 2 cats, behavioral thresholds for the detection of a cochlear nucleus electrical pulse were related to threshold levels of auditory cortex evoked responses. Results of both experiments demonstrate a correspondence between the level of neural activity and the behavioral detection of acoustic stimuli. It is suggested that simultaneous acquisition of neural and behavioral data are unsuited to an absolute threshold discrimination task. (French summary) (15 ref.)—*Journal summary*.

9442. Sherwin, Ira. (Harvard Medical School, Boston, Mass.) **Burst activity of single units in the penicillin epileptogenic focus.** *Electroencephalography & Clinical Neurophysiology*, 1970(Oct), Vol. 29(4), 373-382.—Studied burst firing patterns of single units in the penicillin epileptogenic focus in the cerebral cortex of 18 cats. Based on an analysis of their interspike interval histograms, it is suggested that within a burst the spike intervals tend to be distributed logarithmic-normally. A possible model, based on logarithmic-normal theory, is proposed for spontaneous unitary activity in epileptic and nonepileptic cortex. These data appear to support the concept of the "epileptic-aggregate" as a basic mechanism underlying epileptogenesis. (22 ref.)—*Journal summary*.

Electroencephalography & Evoked Potentials

9443. Menini, C., Dimov, S., Vuillon-Cacchiuto, G., & Naquet, R. (National Center of Scientific Research, Inst. of Neurophysiology, Marseille, France) **Réponses corticales évoquées par la stimulation lumineuse chez le Papio papio.** [Cortical responses evoked by light stimulation in *Papio papio*.] *Electroencephalography & Clinical Neurophysiology*, 1970(Sep), Vol. 29(3), 233-245.—Studied the cortical reactivity to light stimuli (potentials evoked by isolated stimuli and excitability cycles) using paired stimuli at different intervals in 19 photosensitive and nonphotosensitive monkeys. The occipital evoked potential and the excitability cycle of the occipital cortex were similar to those classically described in man. No significant differences were observed between photosensitive and nonphotosensitive Ss. Evoked responses of small amplitude and short latency were observed in the rolandic, frontorolandic, and oculomotor regions. The frontorolandic and oculomotor regions showed striking hyperexcitability involving the late part of the response, particularly marked when S's eyes were closed. The hyperexcitability of the frontorolandic region was 3-4 times greater in photosensitive Ss. It appeared as an oscillatory late activity, particularly clear when the stimulus interval corresponded with the most epileptogenic frequency of stimulation in this animal. The role of reactivity of the frontorolandic cortex in the triggering of paroxysms by flicker is discussed. (41 ref.)—*English summary*.

9444. Barlow, John S. & Estrin, Thelma. (Massachusetts General Hosp., Boston) **Comparative phase characteristics of induced and intrinsic alpha activity.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 1-9.—Compared the phase characteristics of intrinsic alpha activity and of the alpha activity induced by slowly repeated flashes (i.e., rhythmic afterwaves) in 9 adult Ss. EEG recordings from a midline

5-electrode array from the midocciput to the vertex were analyzed by averaging. For most Ss the waves tended to peak progressively earlier at the more anterior locations for both activities than at the occiput where there was considerable variation. No close parallel between induced and intrinsic activity emerged with respect to phase characteristics along the electrode array. Comparison of the amplitude characteristics of the averaged curves indicated that the generators giving rise to the flash-induced alpha activity at the different points along the electrode array are synchronized to a greater degree than are those that give rise to the intrinsic alpha activity. Results are discussed in relation to possible generator mechanisms and function of the induced and intrinsic alpha activity. (French summary) (47 ref.)—*Journal summary*.

9445. **Batuev, A. S. & Pirogov, A. A.** (Leningrad State U., USSR) *Analiz korkovykh vyzvannykh potentsialov pri posloinoi registratsii*. [Analysis of cortical evoked potentials in recording by layer.] *Fiziologicheskii Zhurnal SSSR*, 1970(Apr), Vol. 56(4), 518-526.—24 cats under nembutal and chloralose narcosis were Ss in a study of the inversional effect involving the phases of (a) the primary responses in the visual cortex to light flashes (not more than 50 microsec.), and (b) the associative responses to light in the region of the posterior sigmoid gyrus. On comparison of latent periods before the beginning of the 1st phases of the primary response from the cortical surface and cortical depth of 1300-1500 microns, a significant difference of 1.6-2.9 msec. was disclosed, and the difference in latent periods before the amplitudinal maximum of both initial phases might attain a value of up to 2.4-10 msec. Under chloralose narcosis the deep negative phase of the primary response began later than surface positiveness (in 1.5-3.5 msec. for short-latency primary responses; in 6-7.5 msec. for long-latency primary responses). The amplitudinal maxima of both phases also did not coincide. Associative responses to a light flash, recorded from the surface of the posterior sigmoid gyrus, did not under chloralose narcosis undergo inversion in depth and maintain their positive-negative pattern throughout the layers of the cortex. (English summary) (32 ref.)—*I. D. London*.

9446. **Clusin, William; Giannitrapani, Duilio, & Roccaforte, Peter.** (Michael Reese Psychosomatic & Psychiatric Inst. for Research & Training, Chicago, Ill.) *A numerical approach to matching amplification for the spectral analysis of recorded EEG*. *Electroencephalography & Clinical Neurophysiology*, 1970(Jun), Vol. 28(6), 639-641.—Reports that certain previously inconsequential discrepancies in the amplification provided by EEG equipment were found to introduce considerable inaccuracy into measurements of spectral density and average phase angle over a broad frequency range. These discrepancies seem to be a necessary consequence of small inaccuracies in gain adjustment between amplifiers, of drift in the postamplifiers and of minor asymmetries in the RC coupling of the preamplifiers. By measuring the extent of discrepancies among the spectral measurements of simultaneously amplified versions of an EEG calibration signal, it was possible to develop a reliable procedure for correcting these measurements arithmetically. criminant analysis. *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3845.

9448. **Gofman, S. S. & Freidin, Ya. V.** (Research Inst. of Industrial Hygiene & Occupational Diseases, Sverdlovsk, USSR) *Dannye mnogokanal'noi radio-élektroéntsefalografii u cheloveka pri nervno-émotsional'nom napryazhenii*. [Multichannel radio-electroencephalographic data in man under neuro-emotional tension.] *Byulleten' Eksperimental'noi Biologii i Meditsiny*, 1970(Nov), Vol. 70(11), 19-22.—10 18-37 yr. old Ss participated in a radiotelemetric study of the changes occurring in cerebral bioelectrical activity during tense mental activity under conditions of stress. Radio-EEG recordings with open and closed eyes were made (a) at 2-50 min. intervals before an oral examination, (b) while preparing to answer, (c) during the process of answering, and (d) twice after the examination. Behavior under conditions of stress is shown to correlate with definite EEG manifestations, predominantly expressed (when eyes are open) by increased high-amplitude, periodically regular or paroxysmal slow activity, especially in the occipital regions. (English summary)—*I. D. London*.

9449. **Goldring, Sidney; Aras, Erturan, & Weber, Peter C.** (Washington U., Medical School) *Comparative study of sensory input to motor cortex in animals and man*. *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 537-550.—Identified sensory inputs by transcortical recording of evoked responses and by observations of anesthetized and waking states in 13 cats, 8 squirrel monkeys, and 18 human patients with craniotomies. Input in cats could only be identified in the waking state. The response had a long latency, compared to that in the somatosensory area (S1), and could be evoked by ipsilateral and contralateral somesthetic stimulation and auditory stimuli, but not by visual excitation. Input in monkeys under anesthesia had the same features as that projecting to S1. In the waking state, S1 type input and a long latency ipsilateral and polysensory input were observed similar to that of the cat. Input in man varied. Some showed no contralateral sensory input to motor cortex; others showed only an S1 type projection, or a response of slightly longer latency. Both absence and presence of input could be seen in either the anesthetized or waking S. Ipsilateral somesthetic stimulation evoked no response or a very small potential of nonlocal origin. A response to click was not seen. It is concluded that human motor cortex plays a less important role in integration of disparate sensory inputs from the periphery than does motor cortex of lower animals. (French summary) (28 ref.)—*Journal summary*.

9450. **Hardin, William B. & Castellucci, Vincent F.** (Washington U., Medical School) *Analysis of somatosensory, auditory and visual averaged transcortical and scalp responses in the monkey*. *Electroencephalography & Clinical Neurophysiology*, 1970(May), Vol. 28(5), 488-498.—Recorded averaged evoked responses (AERs) to median nerve, auditory, and photic stimulation with scalp vertex-to-nose or vertex transcortical electrodes in 45 unanesthetized squirrel monkeys. The AERs of all 3 modalities were compared with respect to peak amplitudes and wave shapes in the same and different Ss, and a characteristic pattern for each modality was constructed from the total group. The photic AER differed clearly from the other 2, which were similar. The referentially recorded vertex-to-nose AER

was identical to the single flash electroretinogram. Transcortical recordings were made of AERs from 202 cortical points in 21 Ss using shock, click, and photic stimuli. The frontal cortex and vertex produced locally generated long latency waves to shock and click but not to flash. Only the occipital cortex was productive of true photic responses. The importance of recording with bipolar electrodes across small distances, when studying small-brained animals, to eliminate confusion from unwanted potentials is emphasized. (French summary) (31 ref.)—*Journal summary*.

9451. Hjorth, Bo. (Elema-Schönaner AB, Research & Development Lab., Solna, Sweden) **EEG analysis based on time domain properties.** *Electroencephalography & Clinical Neurophysiology*, 1970(Sep), Vol. 29(3), 306-310.—Presents a method describing the general characteristics of an EEG trace in a few quantitative terms. Its descriptive parameters are entirely based on time, but they can be derived also from the statistical moments of the power spectrum. The method provides a bridge between a physical time domain interpretation and the conventional frequency domain description. The parameters are also based on the concept of variance, giving them an additive property so that the measured values pertain also to any basic elements from which a complex curve may be composed by superposition. The proposed method offers a way to on-line measurement of basic signal properties by means of a time-based calculation, requiring less complex equipment compared to conventional frequency analysis. The data-reducing capability of the parameters has been experimentally stated in the recording of sleep profiles. (French summary)—*Journal summary*.

9452. Jewett, Don L. (U. California, Medical Center, San Francisco) **Volume-conducted potentials in response to auditory stimuli as detected by averaging in the cat.** *Electroencephalography & Clinical Neurophysiology*, 1970(Jun), Vol. 28(6), 609-618.—With the tongue as a reference point in 18 deeply anesthetized cats, recordings from the scalp or rostral brain locations were obtained by repeated averaging, time-locked to an auditory click, which showed 4 positive waves which were labeled P₁, P₂, P₃, and P₄. P₁ occurs simultaneously with N₁ recorded at the round window and is probably generated by the VIIIth nerve. The other waves are likely to be composites of both slow and fast wave activity, but each shows increased amplitude or inversion of polarity or both in the vicinity of classical auditory structures: P₂ near the cochlear nucleus, P₃ near the superior olive, and P₄ in and on either side of the inferior colliculus. A P₅ wave was observed in the inferior colliculus or slightly rostral to it. The medial geniculate and auditory cortex showed no evoked potentials. Results indicate that widely spaced electrodes can detect potentials, by means of averaging, at considerable distances from the generator of the potentials, so that additional evidence about the location of the generator must be provided when using this recording arrangement. The technique can be used to record a sensory system from a single electrode outside the system. (French summary) (26 ref.)—*Journal summary*.

9453. Larsen, L. E. & Walter, D. O. (U. California, Brain Research Inst., Los Angeles) **On automatic methods of sleep staging by EEG spectra.** *Electroencephalography & Clinical Neurophysiology*, 1970(May), Vol. 28(5), 459-467.—Describes a comparison of the multiple regression (MR) technique for sleep stages classification and the technique of multiple discriminant

(MD) analysis, using data provided by the experiments of L. C. Johnson, et al. (see PA, Vol. 44:20286). Application of MD analysis showed an improvement in the identification of Stage-3 sleep (from 0-77%) and REM (from 70-75%) and greatest loss in Stage 4 (from 91-69%). High- and low-alpha Ss, as identified by waking records, were easily discriminated in all stages studied, except REM, where only 1 record was misclassified from each group. Other techniques were investigated to improve the MD method. The combination of a layered decision process that is based on the identification of "clumps" in the test space and the use of smooth curved decision boundaries (i.e., quadratic discriminant functions) raised performance to the following agreements with clinical classification: (a) waking, 91%; (b) Stage 1, 64%; (c) REM, 66%; (d) Stage 2, 85%; (e) Stage 3, 85%; and (f) Stage 4, 85%. It is concluded that the spectra are adequate measurement parameters for all sleep stages, with the exception of Stage 1 and REM where the level of performance is marginally acceptable. (French summary)—*Journal summary*.

9454. Lessard, C. S. & Paschall, R. C. (U. S. Air Force School of Aerospace Medicine, Brooks Air Force Base, Tex.) **A system for quantifying EEG slow wave activity.** *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 516-520.—Describes a system for quantification of sleep EEG slow wave activity by compressing the EEG information and presenting sleep trends. Rationale for the design originates from computer studies into signal decomposition and variability of the EEG activity during a normal night of sleep. A digital, time interval, delta filter system sums and plots the amount of delta activity occurring in each 1-min epoch in discrete steps. A high degree of correspondence is apparent from the resulting plots between the depth of sleep and the delta activity level. (French summary)—*Journal summary*.

9455. Lopes da Silva, F. H., van Rotterdam, A., van Leeuwen, W. Storm, & Tielen, A. M. (Inst. of Medical Physics, Brain Research Group, Utrecht, Netherlands) **Dynamic characteristics of visual evoked potentials in the dog: I. Cortical and subcortical potentials evoked by sine wave modulated light.** *Electroencephalography & Clinical Neurophysiology*, 1970(Sep), Vol. 29(3), 246-259.—Recorded and analyzed, by discrete Fourier analysis, potentials evoked by sine wave modulated light (SML) from the lateral geniculate nucleus and occipital cortex of 5 unanesthetized dogs. The harmonic components of SML evoked potentials were described by frequency response functions. A linear description was only possible regarding the SML evoked potentials recorded from the posterior marginal gyrus. 3 types of nonlinearities were characterized: saturation, nonlinear oscillations responsible for the generation of subharmonics, and essential nonlinearities. The essential nonlinearities corresponded to rectification occurring in "on" and "off" neuronal populations; they were the dominant features of SML evoked potentials in the lateral geniculate nucleus and the calcarine region of occipital cortex. Phase functions were determined in part by a delay time. Relations between SML evoked potential parameters and data obtained at the unit level are discussed. (French summary) (23 ref.)—*Journal summary*.

9456. Lopes da Silva, F. H., van Rotterdam, A., van Leeuwen, W. Storm, & Tielen, A. M. (Inst. of Medical Physics, Brain Research Group, Utrecht, Netherlands)

Dynamic characteristics of visual evoked potentials in the dog: II. Beta frequency selectivity in evoked potentials and background activity.

Electroencephalography & Clinical Neurophysiology, 1970(Sep), Vol. 29(3), 260-268.—Investigated beta selectivity noted in previous research with sine wave modulated light (SML) stimulation by F. Lopes da Silva, A. van Rotterdam, W. van Leeuwen, and A. Tielen (see PA, Vol. 45:Issue 6). SML evoked potentials in dogs, recorded from the posterior marginal gyrus, were described as generated by a beta frequency selective system. Beta resonance was related to the dominant mode of spontaneous activity recorded from the same brain area and characterized by means of power spectra. The resonance behavior of cortical SML evoked potentials was dependent on the state of the S and disappeared during light nembutal anesthesia. A linear model including resonance was devised to account for the cortical frequency selective system. The model was tested experimentally by obtaining the system's impulse response by means of cross-correlating the input and output of the system excited with noise modulated light. The implications of beta selectivity in terms of neural pathways and networks are discussed. (French summary) (23 ref.)—*Journal summary*.

9457. Lüders, Hans. (Kyushu U., Fukuoka, Japan) **The effects of aging on the wave form of the somato-sensory cortical evoked potential.** *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 450-460.—Studied cortical evoked responses to stimulation of the median nerve in 40 normal 19-69 yr. old Ss. Latency, interpeak delay, absolute amplitude, and ratio of amplitudes were classified according to their relation with the positive peaks P_1 - P_4 in 4 principal components. The effects of aging observed were (a) latencies of Components 1 and 4 presented no significant alteration, but the latencies of Components 2 and 3 lengthened significantly with older age; and (b) amplitudes described a U-shaped curve, decreasing at the 30-45 yr. age level and increasing again in older age. In the amplitudes of Component 2, the descending limb of the U was not significant, and in Component 4, no ascending limb of the U was noticed. Each of the 4 principal components that presented a characteristic alteration with aging corresponded to the following functional units: late part of the classical positive-negative primary response, association response, 1st late component, and "V" potential. Findings suggest a selective sensitivity of the different functional units of the somatosensory evoked potential to the aging process. (French summary) (33 ref.)—*Journal summary*.

9458. Norton, P. R. (B.D.H. Research Ltd., Godalming, England) **Differences in the electrophysiological correlates upon receipt of food reward and nonreward in the rat.** *Brain Research*, 1970, Vol. 24(1), 134-138.—Studied the electrophysiological manifestations of emotion in 5 male Wistar rats. Ss were trained to press a lever to receive food pellets in response to an auditory signal. Ss were tested in 38 sessions, each consisting of 20 rewarded and 20 unrewarded trials presented randomly. Analyses of EEGs indicate that potential and amplitude changes differ in the 2 situations, especially in the reticular formation and amygdala. Since these areas have been found in previous research to be connected with emotion, it is suggested that the observed differences between receipt and nonreceipt of a reward are probably correlated with the emotional significance of the situations. The possible impact of the

variables of olfaction and grasping of food are noted.—S. Knapp.

9459. Rebert, Charles S. & Knott, John R. (Stanford Research Inst., Menlo Park, Calif.) **The vertex non-specific evoked potential and latency of contingent negative variation.** *Electroencephalography & Clinical Neurophysiology*, 1970(Jun), Vol. 28(6), 561-565.—Compared potentials evoked at the vertex of 10 adults by clicks or light flashes to potentials elicited during conditions that gave rise to contingent negative variations (CNVs). It was tentatively concluded the CNV onset does not occur before 400 msec. after a warning stimulus, and that CNV onset, or amplitude, or both are related to the optimal CS-UCS interval in classical conditioning. The data were also interpreted as suggesting independent genesis of initial and late components of the vertex evoked potential-CNV complex. Methodological problems associated with the analysis of CNV experiments are suggested. (French summary)—*Journal summary*.

9460. Rhodes, Leland E. & Fleming, Donovan E. (Veterans Administration Hosp., Phoenix, Ariz.) **Sensory restriction in the albino rat: Photically evoked after-discharge correlates.** *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 488-495.—Examined visually evoked responses (VERs) in sensory deprived and control rats with particular attention to after-discharge (AD) patterns affected by sensory restriction. In Exp. I 16 littermate albino rats were raised under sensory deprived and 16 under usual laboratory conditions. Amplitudes of the early N_1 - P_2 component and the later AD activity of the deprived Ss were reduced in size. In Exp. II 16 Ss were raised under deprived conditions, 8 receiving 4 hr. of pulsed light each day. No reliable differences were noted between the 2 groups. Treatment of 8 Ss with pentylenetetrazol (metrazol) produced a reliable VER mean excursion increment, while sodium pentobarbital (nembutal) had no notable effect of VER AD. Extended exposure of 8 Ss to usual laboratory conditions resulted in significant increments in AD amplitude. It is suggested that within the limits of this investigation the effects of sensory deprivation on the rat nervous system are reversible. (French summary)—S. Knapp.

9461. Rhum, Howard B. & Jansen, John W. (U. Oklahoma, Medical Center, Oklahoma City) **Rate of stimulus change and the evoked response: I. Signal rise-time.** *Journal of Auditory Research*, 1969(Jul), Vol. 9(3), 211-216.—The latency and amplitude of summed EEG responses, evoked by tonal stimuli, were measured as a function of signal rise-time on 10 normal-hearing adults. Response latency, measured from an estimated threshold of auditory sensitivity, varied irregularly across rise-times from 10-100 msec. The most salient finding was that latency remained constant between rise times of 100 and 500 msec. This finding is contrasted with measurements made from the beginning of signal onset, which do not take into consideration audiometric threshold, and show an apparent increase in latency as a function of increasing signal rise-time. Response amplitude is a sensitive index of the rate at which signal amplitude changes. The N_1 - P_2 component decreases by approximately .75 microV for each 100-msec decrease in rate of signal onset (increase in rise-time).—*Journal summary*.

9462. Roessler, R., Collins, F., & Ostman, R. (Baylor Coll. of Medicine, Houston, Tex.) **A period analysis classification of sleep stages.** *Electroencephalography*

& *Clinical Neurophysiology*, 1970(Oct), Vol. 29(4), 358-362.—Describes the predictive application of a period analysis classification of waking and sleep stages which achieved an overall agreement of 69% with visually classified epochs among 18 young male Ss. The classification was based upon the number of sec/20 sec epoch of major period counts in each of 3 bandwidths: 0-3, 4-7, and 8-30 cps. Agreement with Stages W (waking), 3, and 4 exceeded the interrater (76%) and intrarater (77%) reliability of visually classified epochs, whereas the identification of Stages 1 and 2 was 45% and 63%, respectively. It is proposed that Stages 1, 1-REM, and 2 may be identified accurately by period analysis of electrooculogram and EMG and by shortening the resolution of 1 sec. used in this study to .5 sec. (French summary)—*Journal summary*.

9463. Rothman, Howard H., Davis, Hallowell, & Hay, Izak S. (Albert Einstein Coll. of Medicine, Yeshiva U.) **Slow evoked cortical potentials and temporal features of stimulation.** *Electroencephalography & Clinical Neurophysiology*, 1970(Sep), Vol. 29(3), 225-232.—Evoked slow cortical responses from 6 16-47 yr. old Ss by either shocks or clicks. Electrodes were at the vertex and the right mastoid region. Various temporal features of stimulation were explored, e.g., regularity of stimulus intervals, duration of intervals, background stimulation rate, and the effect of prolonged exposure to stimulation. In general, the amplitude of response (N_1-P_2) is considerably increased by lengthening the intervals between stimuli. The last interval is the most important but the mean interval, over the prior 10 sec., is also significant. The recovery process for shocks appeared to be faster than for clicks. Irregularity of stimulation per se gives only a slight enhancement. (French summary)—*Journal summary*.

9464. Sagalovich, B. M. & Shipova, L. I. (Research Inst. of Otorhinolaryngology, Moscow, USSR) **Sootnoshenie velichin elektricheskoi reaktivnosti ulitki na deistvie zvukovykh i ul'trazvukovykh stimulov pri vozdušnom i pri kostnom ikh provedenii.** [Relationship between magnitudes of cochlear electrical reaction to the action of sound and ultrasound stimuli conducted through air and bone.] *Fiziologicheskii Zhurnal SSSR*, 1970(Aug), Vol. 56(8), 1118-1124.—The cochlear microphonic potentials of 24 rabbits and 19 guinea pigs were recorded. The ratio of thresholds of stimulation through air and bone is shown to be a function of the frequency of the test tones. In all Ss, the thresholds of auditory stimulation through bone conduction exceeded those through air conduction in the range of frequencies up to 25-27 kcps for rabbits and 27-32 kcps for guinea pigs. With higher frequencies, thresholds for bone conduction progressively dropped below those for air conduction. Analogous relationships obtained in cochlear reactions to stimuli of suprathreshold intensity. (English summary)—*I. D. London*.

9465. Sarne, Yosef & Feldman, Shaul. (Hadassah U. Hosp., Jerusalem, Israel) **Sensory evoked potentials in the hypothalamus of the rat.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 45-51.—Recorded sciatic, acoustic, and photic evoked potentials in the hypothalamus in 32 male albino rats under urethane anesthesia. While the sciatic and acoustic responses were of short latency and had a short neuronal recovery, the photic responses were of long latency and their recovery was prolonged. Evoked potentials in the

lateral hypothalamus were of shorter latency than those recorded in the medial regions. Possible neural pathways involved in the mediation of the sensory impulses to the hypothalamus are discussed. (French summary) (16 ref.)—*Journal summary*.

9466. Shaw, J. C. (Graylingwell Hosp., Clinical Psychiatry Unit, Chichester, England) **A method for continuously recording characteristics of EEG topography.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 592-601.—Describes a method for continuously recording characteristics of EEG topography. The signal derived from 1 electrode is chosen as a reference signal and the activities at other electrodes are compared with it. Comparison is made by using exponentially weighted moving average estimates of the correlation coefficient, regression coefficient, and time difference between signals. The presence of focal activity in noise can be detected provided the signal is available noise-free at 1 channel. The technique is used to show that the topographical change in alpha activity, as a result of doing mental arithmetic, differs from that due to opening the eyes. The asymmetry of alpha time relationships in the 2 hemispheres is confirmed and the relation of these measures to models of alpha distribution is discussed. (French summary) (42 ref.)—*Journal summary*.

9467. Sommer-Smith, J. A. & Morocutti, C. (Inst. of Investigation of Biological Sciences, Montevideo, Uruguay) **Cortical and subcortical evoked potentials during conditioning.** *Electroencephalography & Clinical Neurophysiology*, 1970(Oct), Vol. 29(4), 383-391.—Studied the amplitudes of the waves of cortical and subcortical potentials evoked by a sound in relation to behavior, EEG, and learning procedure during the classical conditioning stages in 10 cats. The stages were completed without concomitant regular evolution of the evoked potentials, either specific or nonspecific, e.g., consistent diminution during habituation and extinction, and increase during reinforcement. Results indicate that intrinsic increase of the evoked potentials, independent of voltage modifications of the basal EEG, were systematically evident when the stimulus provoked an actual state of alertness. (French summary) (21 ref.)—*Journal summary*.

9468. Sterman, Maurice B., Howe, Richard C., & MacDonald, Lorraine R. (Veterans Administration Hosp., Sepulveda, Calif.) **Facilitation of spindle-burst sleep by conditioning of electroencephalographic activity while awake.** *Science*, 1970(Feb), Vol. 167(3921), 1146-1148.—Correlated behaviorally a slow-wave EEG rhythm recorded from the sensorimotor cortex of 8 adult waking cats with the suppression of movement. Facilitation of this rhythm through conditioning selectively enhanced a similar pattern recorded during sleep, the familiar spindle burst. The training also produced longer epochs of undisturbed sleep. The specific neural mechanism manipulated during wakefulness appeared to function also in sleep and to be involved with the regulation of phasic motor behavior.—*Journal abstract*.

9469. Symmes, D., Prichard, J. W., & Mann, L. I. (National Inst. of Health, Bethesda, Md.) **Spectral analysis of fetal sheep EEG during hypoxia.** *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 511-515.—Obtained power spectra and coherence functions on samples of EEG recorded from fetal sheep in utero. Hypoxia was

produced by respiring the ewe on gas mixtures containing reduced oxygen pressure. With both halothane and local anesthesia, the EEG changes associated with hypoxia consisted of an early power reduction in higher frequencies followed by a reduction of overall amplitude leading to the isoelectric state. Results show that the times at which statistically significant changes occur are not earlier during the progressive fall of fetal arterial pO_2 than visual estimates of abnormality made on line from the paper record and are in all cases later than significant cardiovascular changes. (French summary)—*Journal summary*.

9470. Vlakovitsch, Stephan. (Swiss Inst. for Epileptics, Zurich) **The technique and preliminary results of intraventricular EEG recording (brain-stem EEG).** *Electroencephalography & Clinical Neurophysiology*, 1970(May), Vol. 28(5), 513-517.—Presents a method of intraventricular EEG recording: Suboccipital puncture is made with a special needle which consists of 2 barrels, 1 inside the other, each of which has a longitudinal slit on opposite sides. After the bundle of electrodes, which is composed of 2-8 insulated silver wires (diameter of each wire .065-.12 mm.) is inserted, it glides forward along the dorsal plane of the medulla and, by its medial position, reaches the ventricular system through the foramen of Magendi. Out of a total of 22 punctures the ratio of successful to unsuccessful attainment of the ventricular system was 1:3. The same insertion of the electrodes was performed on 4 dogs. Histopathological examinations showed neither damage nor later reactions of the brain tissue. A case of Jacksonian epilepsy is presented in which, during an attack, theta activity could be recorded in the brainstem area. It is suggested that this method will open new sources of clinically useful information in brain, epilepsy, and dream research. (German summary)—*Journal summary*.

Measurements of subjective effects produced by triangular waveforms of angular velocity.** *USNAMI Army-Navy Joint Report*, 1969(Jun), No. 1073, 16 p.—Compared 2 methods for measuring subjective angular displacement produced by triangular waveforms of

angular velocity while young naval officers were enclosed in a vertical-axis rotation device that excluded visual and auditory cues of angular motion. Accuracy of subjective estimates was influenced by the methods and by the magnitudes of the acceleration comprising the stimulus waveforms. Results suggest that 1 of the methods, with slight modification, will provide reliable indication of the subjective effects of controlled semicircular canal stimulation. (20 ref.)—*Journal abstract*.

9476. Gusef'nikov, V. I. **Pervaya vsesoyuznaya konferentsiya po strukture i funktsii obonyatel'nogo analizatora zhivotnykh i cheloveka i ikh modelirovaniyu.** [First All-Union Conference on the Structure and Function of the Human and Animal Olfactory Analyzer and Their Modeling.] *Fiziologicheskii Zhurnal SSSR*, 1970(Apr), Vol. 56(4), 676-678.—Presents an account of the 1969 conference, held in Moscow. Summaries of a number of papers are provided, dealing with (a) the morphology and histochemistry of the olfactory analyzer, (b) the theory of olfactory perception and the mechanisms involved in the primary processes of olfactory reception, (c) the features characterizing the functional organization and the course of the basic nervous processes at all levels of the olfactory analyzer (epithelium, bulb, and higher centers), (d) the role of olfaction in animal behavior, (e) research methodology and modeling of olfactory functions, and (f) clinical analysis.—I. D. London.

9477. Liff, Harold J. & Goldstein, Moise H. (Johns Hopkins U., Medical School) **Peripheral inhibition in auditory fibers in the frog.** *Journal of the Acoustical Society of America*, 1970(Jun), Vol. 47(6, Pt. 2), 1538-1547.—Studied 2-tone interactions in complex units in 20 bullfrogs and 44 leopard frogs. The discharges of a complex unit in response to a tone at its best excitatory frequency (BEF) could be suppressed by addition of a 2nd, higher-frequency tone. The best inhibitory frequency (BIF) was that for which the least intense tone totally suppressed the response to a BEF tone. Between BEF and BIF, there was a frequency range in which tones had both excitatory and inhibitory effects, called the "gray region." During prolonged continuous presentation of a high-level inhibiting tone, the inhibitory effect showed no adaptation. A rebound in firing rate occurred when a unit, which had been previously adapted and then inhibited, was released from the inhibition by terminating the inhibitory tone. The level of an inhibitory tone necessary for total inhibition depended on excitator level, even for levels at which the spike rate in response to the excitator alone had saturated. Results are discussed regarding the stage in the process leading to neuronal excitation at which inhibition occurs, and 2-tone interactions in frog complex units are compared with those in mammalian 1st-order units. (21 ref.)—*Journal abstract*.

9478. Meiselman, Herbert L. & Halpern, Bruce P. (U.S. Army Natick Lab., Mass.) **Effects of Gymnema sylvestre on complex tastes elicited by amino acids and sucrose.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1379-1384.—Studied the effects of an aqueous decoction of the taste modifier, *Gymnema sylvestre*, on 2 amino acids, glycine and dl-alanine, and on sucrose. Each of 6 nonsmoking undergraduates estimated the magnitude of each taste quality response category (sour, salty, bitter, and sweet) on each presentation of a solution. G extracts produced the expected depression of sweetness for all 3 chemicals, and also produced

depressions and enhancements of some of the other taste quality categories for these stimuli. Results are discussed in terms of: (a) possible reciprocal characteristics of taste quality categories, (b) taste mixtures, and (c) simple and complex taste sources. (31 ref.) *Journal abstract.*

9479. Owens, Gale G. & Guedry, Fred E. **Assessment of semicircular canal function: II. Individual differences in subjective angular displacement produced by triangular waveforms of angular velocity.** *USN AMI Army-Navy Joint Report*, 1969(Jun), No. 1074, 15 p.—Mean estimates ($N=26$) of short arcs of passive whole-body rotation about an Earth-vertical axis were accurate when Ss used a psychophysical procedure that involved counterdisplacement of a pointer on a dial. 26 19-25 yr. old navy midshipmen, officer flight candidates, and medical students served as Ss. The required retrospective displacement judgments yielded more accurate mean estimates of angular displacement than were obtained previously. The differences in response curves in the various conditions of the 2 experiments illustrate the importance of attention to psychophysical procedures prior to attempting to develop models of the vestibular endorgans to explain results. The method used is sufficient to detect prominent individual differences within a sample of aviation training candidates, and the results obtained thus far indicate high test-retest reliability ($r_{12}=.94$).—*Journal abstract.*

9480. Pearlman, Alan L. & Daw, Nigel W. (Washington U., Medical School) **Opponent color cells in the cat lateral geniculate nucleus.** *Science*, 1970(Jan), Vol. 167(3914), 84-86.—Describes a microelectrode survey of the lateral geniculate in 3 adult cats which uncovered an infrequent new type of lateral geniculate cell in Layer B with "on" center responses to short wavelength and "off" center responses to long wavelength. The short wavelength responses were mediated by cones with peak sensitivity at about 450 nm., and the long wavelength responses by cones with peak sensitivity at 556 nm. 2 of the 3 opponent color cells also had double opponent features. *Journal abstract.*

9481. Shaifut, E. P. (Leningrad State U., USSR) **Rol' antennnykh svoistv setchatki v analize zritel'nogo prostranstva.** [Role of the antennal properties of the retina in analysis of visual space.] *Fiziologicheskii Zhurnal SSSR*, 1970(Feb), Vol. 56(2), 137-143.—A new mechanism is suggested for the estimation of distances and sizes of objects within the visual system. It is shown that, as a result of neuronal processing of distributional data accruing from the activity of directionally sensitive cones, information could be gained on the relative positions of objects in the visual field independently of whether their images are in or out of focus on the retina, and the state of accommodation of the eye. Such information is procurable if the retina is thought as having the properties of a "polyclemental antenna": (a) the individual receptor possesses angular selectivity, (b) the cylindrically symmetrical axes of all receptors pass through the center of the crystalline lens, and (c) there is lateral processing of the distributional data on receptor activity. 2 stages of central processing of retinal information are postulated: a projective stage of analysis, and an associative stage which involves the use of past experience. Thus, the first corresponds to the "projection of sensation" of an object, and the other to determination of the "quality of the object in sensation." The neuronal processing of retinal activity is presented in the

form of formulae whose consequences agree quite well with the experimental facts derived from the study of size constancy. (English summary)—*I. D. London.*

9482. Young, Laurence R., Meiry, Jacob L., Newman, Joel S., & Feather, James E. (U.S. Air Force Systems Command, Wright-Patterson Air Force Base, O.) **Research in design and development of a functional model of the human nonauditory labyrinths.** *USAF AMRL Technical Report*, 1969, No. 68-102, 1-107.—Describes a physical functional model of the human vestibular system which may be exposed to the same linear and angular motions which men normally receive. The model indicates the predicted vestibular outputs which correspond to nonvisual perception or orientation in space, and nystagmus. It may be used as a guide to experiments, for prediction of unusual effects, and as a training aid. The vestibular model consists of 2 major subassemblies: a 3-axis gimbal system for simulating head motion; and a special purpose analog computer which permits simulation of the semicircular canal and otolith dynamic response and nonlinearities. (27 ref.)—*Journal abstract.*

BIOCHEMISTRY

9483. ———. **Resumes of research projects in psychopharmacology.** *Psychopharmacology Bulletin*, 1969(Jul), Vol. 5(3), 42-48.—Presents 10 resumes prepared by the extramural research branch of the National Institute of Mental Health, describing studies devoted to psychological, biochemical, pharmacological, and toxicological mechanisms of action of psychotropic drugs. Specific topics include: neurochemical correlates of behavior, neuropharmacology of local brain function, drug-receptor interactions, and hypothalamic control of behavioral thermoregulation. Resumes include a statement of purpose, Ss, method, results, and implications of each study.—*P. McMillan.*

9484. Braud, William G. (U. Houston) **Extinction in goldfish: Facilitation by intracranial injection of RNA from brains of extinguished donors.** *Science*, 1970(Jun), Vol. 168(3936), 1234-1236.—Prepared extracts rich in RNA from the brains of 16 goldfish that had acquired and then extinguished a light-signaled avoidance to shock in an aquatic shuttle-box. 14 naive recipient Ss injected intracranially with such extracts, extinguished the response significantly faster than 14 Ss injected with extracts prepared from brains of 16 naive donors.—*Journal abstract.*

9485. Cabibbe, F. & Mangoni, A. (U. Milano, Psychiatric Clinic, Italy) **Livelli di amine cerebrali in animali trattati con carbonato di litio.** [Brain amine levels in animals treated with lithium carbonate.] *Acta Neurologica*, 1970(Mar), Vol. 25(2), 170-175.—Studied the effects of lithium, used in manic-depressive illness, on cerebral amines (dopamine, serotonin, and norepinephrine). 13 white rats were treated for 60 days with 100 mg/kg of lithium. The method of extraction adopted was that of G. Brownlee and T. Spriggs. For the reading, the spectrophotometer of Aminco-Boman was used. The brain level of dopamine decreased while the norepinephrine and serotonin levels increased. It is concluded that lithium affects the metabolism of brain amines. There is an increased turnover of amines; their catabolism accelerates through oxidative deamination. (English summary) (16 ref.)—*A. M. Farfaglia.*

9486. Chowdury, A. K., et al. (Guy's Hosp., Medical

School, London, England) **The influence of psychotropic drugs on aldolase, mitochondrial malic dehydrogenase and $Mg^{++}Na^{+}K^{+}$ adenosine triphosphatase.** *British Journal of Pharmacology*, 1969(Oct), Vol. 37(2), 459-467.—Investigated the effects of psychotropic drugs on enzymes in vitro. Chlorpromazine inhibited mitochondrial malate dehydrogenase in concentrations of 1.4×10^{-4} M and above. No effect was observed below this concentration. A sharp inflection in the $1/v$ drug plot was also seen with chlorpromazine (1.4×10^{-4} M), trifluoperazine (1×10^{-5} M), prochlorperazine (1×10^{-4} M), and amylbarbitone (8×10^{-3} M) acting on rat brain ($Na^{+}-K^{+}$) Mg^{++} -ATPase and with chlorpromazine (10^{-4} M) and imipramine (3×10^{-4} M) acting on aldolase.—*Journal abstract*.

9487. Franksson, Gunhild & Änggård, Erik. (Karolinska Inst., Stockholm, Sweden) **The plasma protein binding of amphetamine, catecholamines and related compounds.** *Acta Pharmacologica et Toxicologica*, 1970, Vol. 28(3), 209-214. Studied the plasma protein binding of amphetamine, phenmetrazine, adrenaline, noradrenaline, dopamine, normetanephrine, and metanephrine using equilibrium dialysis with human plasma. The binding of amphetamine and phenmetrazine at 5×10^{-7} M to 5×10^{-6} M was about 20%. No difference in the binding of amphetamine was found between 6 drug nondependent and 6 tolerant dependent Ss. At physiological concentrations ($< 10^{-6}$ M) adrenaline was bound to about 20%, noradrenaline and dopamine to about 13%. The binding of metanephrine and normetanephrine was of a lower order, i.e., about 5%. It is suggested that the results are of value for the understanding of the overall pharmacodynamic situation in amphetamine dependence. *Journal abstract*.

9488. Wiltzig, John; Woods, A. E., & Anthony, E. J. (Veterans Hosp., Murfreesboro, Tenn.) **Mechanisms of lithium action: Endogenous tissue levels, excretion in emotional states, and behavioral effects.** *Diseases of the Nervous System*, 1970(Nov), Vol. 31(11), 767-771.—Reports investigations into possible roles played by endogenous and exogenous lithium in normal or abnormal physiological and psychological processes in animal and human Ss. Results of endogenous studies suggest that lithium is present in widely varying amounts in biological tissue. Difficulties in measuring lithium are reviewed. "Pharmaceutical lithium has little effect on standard behavioral measures of laboratory rats, but it may interact differentially with hormonal substances." —P. McMillan.

Hormones

9489. Moltz, Howard; Lubin, Michael; Leon, Michael, & Numan, Michael. (U. Chicago) **Hormonal induction of maternal behavior in the ovariectomized nulliparous rat.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1373-1377.—Attempted to improve maternal behavior via a triad of the hormones estrogen, progesterone, and prolactin in 10 ovariectomized nulliparous female Wistar rats. Ss were administered subcutaneously estradiol benzoate, progesterone, and prolactin. The estradiol was injected from Day 1 through Day 11; the progesterone from Day 6 through Day 9; and the prolactin on the evening of Day 9 and the morning of Day 10. 40 control females, assigned respectively to 4 groups, were administered either only 2

of the 3 inductor hormones—the vehicle in each case having been substituted for the hormone omitted—or simply all 3 vehicles. On the afternoon of Day 10, 6 normally-delivered foster young, 6-20 hr. of age, were proffered each female. Of the 10 experimental Ss, each, without exception, showed full maternal behavior at between 35 and 40 hr. Not only does this represent a significant reduction in latency from the average of 6-7 days characteristic of untreated nulliparae, but represents as well a uniformity in time of onset closely approaching that exhibited by the puerperal female. In contrast, each of the control groups showed marked variability in onset and a significantly higher median latency. Just how estrogen, progesterone, and prolactin acted to induce maternal behavior and the possibility of reducing even further the obtained latency of 35-40 hr. are discussed. (28 ref.) *Journal abstract*.

9490. Thoman, Evelyn B., & Levine, Seymour. (Stanford U. Medical School) **Hormonal and behavioral changes in the rat mother as a function of early experience treatment of the offspring.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1417-1421. Investigated the long-term effects on 48 Sprague-Dawley rat mothers of early mother-infant manipulations; maternal rats were assigned to groups in which, for 16 days following parturition, the offspring were handled, or rotated among Ss. S alone was disturbed, or no treatment was given. Beginning 3 wk. after the litters were weaned, newborn foster pups were placed with the maternal females and maintained with them for 20 days thereafter. Groups of foster pups were alternated between the Ss and lactating females twice daily. The 3 treated groups differed from the controls on each measure taken, in that: the original litters weighed less at weaning, retrieving scores on all tests with the foster pups were higher, 1) was reinstated earlier, and diestrous cycles were more prolonged during the fostering period. There was a significant negative correlation between retrieving scores and the number of estrous periods that occurred during the fostering period, and also between retrieving and initiation of lactation as measured by milk in the duodenum of the pups. Since the variations in behavior as a function of the early mother-infant manipulations preceded hormonal changes, it was postulated that the behavioral response may act to initiate changes in the CNS regulation of the hormones involved in maternal behavior. (18 ref.) *Journal abstract*.

9491. Yamori, Yukio; Lovenberg, Walter, & Sjoerdsma, Albert. (National Inst. of Health, Bethesda, Md.) **Norepinephrine metabolism in brainstem of spontaneously hypertensive rats.** *Science*, 1970(Oct), Vol. 170(3957), 544-546.—Reports that concentrations of norepinephrine in lower brainstem and hypothalamus of 24 genetically hypertensive rats were significantly lower than in 24 Wistar and Sprague-Dawley control rats. There was a concomitant reduction (50%) in aromatic L-amino acid decarboxylase but not in tyrosine hydroxylase activity. A possible relation of this central catecholamine deficiency to the hypertension is discussed. (18 ref.) *Journal summary*.

Drug Effects—Human

9492. ———. **Sleeping pills.** *British Medical Journal*, 1970(Aug), Vol. 3(5718), 296-297.—Describes the effect of sleeping pills on healthy volunteers used in a

previous study by J. I. Evans and O. Ogunremi (see PA, Vol. 45:Issue 6). Chloral hydrate (.8 gm.) produced a suppression of REM; dichloralphenazone (1.3 gm.) or mandrax (methaqualone and diphenhydramine) had no such effect. Methaqualone (150 mg.) reduced the intensity of REM; nitrazepam (5 or 10 mg.) is safe in overdosage, has a low toxic value, but seems to produce a hangover, also amylobarbitone has a hangover effect. A physician, who prescribes sleeping pills, must consider their effect on normal sleep, relative safety when abused, and possible hangover effect.—*I. Halev.*

9493. **Cappiello, Jole & Balacco Gabrieli, Corrado.** (U. Bari, Clinic for Nervous & Mental Diseases, Italy) **Il campo visivo dopo somministrazione di nicotinamide.** [The visual field after the administration of nicotinamide.] *Acta Neurologica*, 1970(Jul), Vol. 25(4), 457-461.—Studied the importance of the emotive state of mesodiencephalic hyperexcitability in determining campometrical variations, i.e., the visual field. 15 young normal Ss were studied before and after the administration of nicotinamide. The perimeter of Goldman and the scotometer of Bjerrum were used. No variation in peripheral limits was found, but there was a slight increase in the width of the physiological scotoma recognizable after 1 gm. of the drug. There was not a change in the caliber of the retinal vessel, nor were there any side effects except a modest hyperemia of the face. It is concluded that nicotinamide (in doses of 1, 2, and 3 gm.) does not provoke variations in the peripheral limits of the visual field. (English & French summaries)—*A. M. Farfaglia.*

9494. **Evans, J. I. & Ogunremi, O.** (U. Edinburgh, Scotland) **Sleep and hypnotics: Further experiments.** *British Medical Journal*, 1970(Aug), Vol. 3(5718), 310-313.—Investigated the effects of clinical doses of chloral hydrate (800 mg.), dichloral phenazone (1300 mg.), and mandrax (methaqualone 250 mg. and diphenhydramine 25 mg.) in 2 experiments over a 1-2 wk. period. 4 healthy males were used in each experiment and received placebo or drug throughout a 6-8 wk. period when control records, drug records, and drug withdrawal records were obtained. Chloral hydrate was found to depress REM sleep appreciably though less consistently than amylobarbitone. No withdrawal REM sleep rebound was found. Neither dichloralphenazone nor mandrax was found consistently to depress REM sleep, though occasional nights when REM sleep was low occurred more often with mandrax. It is postulated that there exists a "threshold" in the dose of a hypnotic, and that when this is exceeded the drug will produce REM reduction. It is concluded that it may be possible to prescribe a drug which is clinically useful while avoiding withdrawal effects.—*Journal abstract.*

9495. **Hurst, P. M., Radlow, R., & Bagley, Sallyann K.** (Inst. for Research, State College, Pa.) **Drug effects upon data processing as functions of storage and retrieval parameters.** *Ergonomics*, 1970(Jul), Vol. 13(4), 435-444.—Performed a series of experiments to investigate the effects of various stimulant and depressant drugs upon performance under task-induced stress. The 1st 4 experiments, each of which included d-amphetamine in 1 or more dosage, are summarized. This compound was generally the most facilitative of all the drugs tested, but Exp. IV, reversed its enhancement effect. Exp. V, with 48 undergraduates, which is presented in detail, was performed to isolate the crucial task parameters which determine whether d-amphetamine enhances performance or impairs it. To assess

further the relationship between mood and performance effects, sodium amylobarbitone was also given, either alone or in combination with d-amphetamine. Results indicate that the enhancement reversal under amphetamine was specific to high input rates, rather than a function of difficulty per se or of other alternative mechanisms. Amylobarbitone given separately was closely comparable to placebo. When combined with d-amphetamine, it yielded results not significantly different from those of d-amphetamine given by itself, both with performance and mood ratings. The latter are at variance with published results, and precluded 1 additional test of the relationship between mood effects and performance under stress. (French & German summaries) (15 ref.)—*Journal abstract.*

9496. **McGlothlin, William H. & Arnold, David O.** (U. California, Los Angeles) **LSD revisited: A ten-year follow-up of medical LSD use.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 35-49.—Conducted a follow-up survey of 247 persons who received LSD in either an experimental (nonmedical) or psychotherapeutic setting to determine the lasting effects, if any, related to use of the drug. A comparison group of 50 controls who had never received LSD or other hallucinogen was also used. Information was collected from each S by a structured interview and self-administered questionnaire. Some subsequent non-medical use of LSD was reported by 23%, who attributed more personality changes to the drug's use. There is, however, little evidence that measurable, lasting personality, belief, value, attitude, or behavior changes were produced in the sample as a whole. Compulsive patterns of LSD use rarely developed; the nature of the drug effect apparently is such that it becomes less attractive with continued use and, in the long-term, is almost always self-limiting. (26 ref.)—*Journal abstract.*

9497. **Moylan-Jones, R. J.** (Chemical Defence Establishment, Medical Research Div., Salisbury, England) **The effect of a large dose of atropine upon the performance of routine tasks.** *British Journal of Pharmacology*, 1969(Sep), Vol. 37(1), 301-305.—Assessed the effect of a 6-mg atropine sulphate injection on tasks, including hard labor, skilled work, use of instruments and tools, and shooting. 23 adult male military volunteers served as Ss. Impairment of performance was seen, but was statistically significant only in some tasks. Drowsiness occurred in 21 Ss and perceptual disorders were common, but 2 Ss were almost completely resistant to the drug. Implications of the therapeutic use of comparable doses of atropine are discussed.—*Journal abstract.*

9498. **Ruttkay-Nedecký, I. & Cagán, S.** (Slovak Academy of Sciences, Inst. of Normal & Pathological Physiology, Bratislava, Czechoslovakia) **Blood pressure of students the day before examination: A double-blind study of the effects of barbiturate and placebo.** *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 196-200.—Selected 2 samples, 38 low blood pressure reactors and 41 high blood pressure reactors, from a group of 402 healthy male undergraduates. Late orthostatic diastolic blood pressure rose gradually in both samples during the period of examinations, reaching peak values the day before the last examination. This rise of blood pressure could be alleviated and converted to a fall in high reactors either by administration of low phenobarbital doses, or by administration of placebo.—*Journal summary.*

9499. **Schieser, David W. & Cohen, Seymour.** (State

Dept. of Public Health, Bureau of Food & Drug Inspection, Berkeley, Calif.) **Drugs and their effects.** *California's Health*, 1968(Feb), Vol. 25(8), 2-6, 21.—Describes various drugs grouped in classes of depressants, stimulants, and hallucinogens, and their effects on mind and behavior.—*J. Canada*.

9500. Snyder, Solomon H., Weingartner, Herbert, & Failace, Louis A. (Johns Hopkins U., Medical School) **DOET (2,5-dimethoxy-4-ethylamphetamine), a new psychotropic drug: Effects of varying doses in man.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 50-55.—Examines DOET, a new psychotropic agent which chemically resembles mescaline and amphetamine. It is essentially the ethyl homolog of DOM (2,5-dimethoxy-4-methylamphetamine), a psychotomimetic drug widely used by hippie populations and designated "STP." DOET was administered to normal male white 21-35 yr. old college graduates in doses ranging from .75-4 mg. and contrasted with effects of a water placebo. In all cases DOET produced subjective effects including a mild euphoria, a feeling of enhanced self-awareness, and a tendency to feel anxious at higher doses. Although there was some increase in subjective effects at higher doses, this was not marked. No hallucinogenic or psychotomimetic effects were observed at any dose. Over a five-fold range of pharmacologically active dosage, the enhanced awareness produced by DOET was not associated with psychotomimetic or hallucinogenic actions.—*Journal abstract*.

9501. Tjio, Joe H., Pahnke, Walter N., & Kurland, Albert A. (National Inst. of Health, National Inst. of Arthritis & Metabolic Disease, Bethesda, Md.) **LSD and chromosomes: A controlled experiment.** *JAMA: Journal of the American Medical Association*, 1969(Nov), Vol. 210(5), 849-856.—Studied chromosomes of lymphocytes in 32 patients before and after they took LSD as part of double-blind, controlled research of the effects of the drug in psychotherapy and in 5 black-market LSD users who volunteered to take pure LSD in a research setting. Statistical analysis revealed no significant difference between the before- and after-LSD chromosomal aberration rates. A post-LSD study of 8 normal Ss who had received LSD in previous research experiments was also performed with the same cytogenetic methods. Results of these experiments consistently support the conclusion that at this time there is no definite evidence that pure LSD damages chromosomes of human lymphocytes in vivo as studied from 72 hr. cultures. (27 ref.)—*Journal abstract*.

9502. Vogel, W. H., McFarland, H., & Prince, L. N. (Jefferson Medical Coll.) **Decarboxylation of 3,4-dihydroxyphenylalanine in various human adult and fetal tissues.** *Biochemical Pharmacology*, 1970(Feb), Vol. 19(2), 618-620.—Compared differences in decarboxylation of 3,4-dihydroxyphenylalanine (DOPA) by aromatic amino acid decarboxylase in various human adult and fetal tissues. DOPA end products have been implicated in the pathogenesis of schizophrenia. Results of decarboxylation in adult human samples varied greatly and were much weaker than those in the rat or other animal tissues. The addition of pyridoxal phosphate increased the decarboxylation of DOPA. The pyridoxal phosphate-induced increases in decarboxylation were found to be greatest in adult heart and fetal lung tissues. Results also demonstrated that fetal tissue decarboxylation activities were higher than those of adult tissues (except in heart and brain tissues where no significant differences were observed).—*B. A. Stanton*.

9503. von Wright, J. M. & Mikkonen, Valde. (U. Turku, Finland) **The influence of alcohol on the detection of light signals in different parts of the visual field.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 167-175.—Male undergraduates, 3 experienced and 3 naive, and all accustomed to moderate social drinking, performed 12 times each a signal detection task lasting 40 min. in parallel with a simple tracking task. Ss reported every 2nd sec. whether or not a signal was given in any 1 of 10 widely spaced locations. .5 or 1 ml. alcohol/kg body weight or no alcohol was given 35 min. prior to the task. Hit rate (HR) covaried with tracking efficiency; false alarm rate was uniformly low. Variation in signal probability had no effect. Alcohol had a strong and uniform effect on experienced Ss, reducing HR for all signals and producing a funneling effect, but had little effect on the performance of naive Ss. Motivational variables which may account for the individual differences are discussed.—*Journal abstract*.

Drug Effects-Animal

9504. Albanus, Lennart. (Research Inst. of National Defence, Stockholm, Sweden) **Central and peripheral effects of anticholinergic compounds.** *Acta Pharmacologica et Toxicologica*, 1970, Vol. 28(4), 305-326.—Compared the pharmacological effects of some piperidyl-, tropinyl-, and quinuclidinylesters of glycolic acid with atropine, scopolamine, and methyl atropine. The peripheral anticholinergic effects are also studied in relation to their effects on behavior in 50 adult dogs. All glycolates elicited behavioral effects, especially on locomotion, similar to those seen following atropine and scopolamine. Even high doses of methyl atropine produced effects indistinguishable from those produced by atropine and scopolamine. The most active compounds affected behavior at a dose of 10 µg/kg body weight given subcutaneously. All compounds elicited anticholinergic activity, i.e., tachycardia, mydriasis, inhibition of salivation, and block of acetylcholine hydrochloride response. The most potent compounds on behavior were quinuclidinylesters of phenyl and/or thienyl glycolic acid which also had the strongest and most prolonged classical anticholinergic effects. Results indicate that behavioral effects are related to anticholinergic activity but that other factors, e.g., lipid-solubility and metabolism interfere with the central activity.—*Journal abstract*.

9505. Allan, Dorothy; Baird, J. R., & Ellis, Kathleen E. (U. Glasgow, Scotland) **Interaction between (±)-amphetamine and atropine on the rat cardiovascular system.** *British Journal of Pharmacology*, 1969(Oct), Vol. 37(2), 367-370.—Effects of atropine on pithed blood pressure after (±)-amphetamine depended on the pattern of the cardiovascular responses to the latter in male rats. If the pressor response to amphetamine was followed by oscillations of blood pressure and a reduction in pulse pressure, or by a fall in blood pressure terminating in circulatory failure, atropine increased blood pressure, but if it was not followed by these patterns, atropine decreased blood pressure. It is suggested that the fall in blood pressure produced by atropine after amphetamine is due to weak alpha-adrenoceptor blockade.—*Journal abstract*.

9506. Andreola, M. L. & Cocchi, A. (U. Milan, Psychiatric Clinic, Italy) **Aspetti morfologici della somministrazione nell'animale di un nuovo antidepressivo: il BAY 1521.** [Morphological aspects of the administering to animals a new antidepressant: BAY 1521.] *Acta Neurologica*, 1970(Mar), Vol. 25(2), 147-155.—Conducted an experiment on mice to analyze the effect of BAY 1521, a new antidepressant from Bayer laboratories. 3 dosages were administered: $\frac{1}{3}$, $\frac{1}{50}$, and $\frac{1}{200}$ LD₅₀. With the 1st 2 dosages, there was motor hyperexcitability, without muscular hypotonia, proportionate to the intensity and duration of the dosage administered. From a morphological viewpoint, pericellular and intracellular edema was observed. The thalamic neurons demonstrated morphological alterations characterized by a disappearance of the cellular membrane and an absence or reduction of the cytoplasmic volume and site. Compared to the effects of imipramine and amitriptyline, the new derivative is like amitriptyline in its symptomatological effects but differs from both in cellular action. It is concluded that BAY 1521 is a "deep action" drug, and possesses a great power of penetration on neuron structure. (French & English summaries)—A. M. Farfaglia.

9507. Basset, J. R., Cairncross, K. D., Hackett, N. D., & Story, Margot. (Riker Lab., Research Div., Hornsby, New South Wales, Australia) **Studies on the peripheral pharmacology of fenazoxine, a potential antidepressant drug.** *British Journal of Pharmacology*, 1969(Sep), Vol. 37(1), 69-78. Investigated the hypothesis that the cyclization of the alkyl amino chain of orphenadrine results in a molecule which retains the noradrenaline sensitizing action of orphenadrine but lacks the antimuscarinic activity. The antimuscarinic activity of fenazoxine on a guinea pig ileum was approximately $\frac{1}{30}$ that of orphenadrine. Fenazoxine, dexamethylimipramine, and cocaine potentiated the response to noradrenaline and sympathetic nerve stimulation on the cat nictitating membrane, isolated rabbit ear artery, and isolated driven atrial strip preparations. On the driven atrial strip preparation, fenazoxine produced a small potentiation of the inotropic response to isoprenaline. Fenazoxine antagonized the inotropic response to tyramine. Chronic denervation of the cat nictitating membrane abolished the potentiating action of fenazoxine. Results suggest that fenazoxine inhibits catecholamine uptake similar to desmethylimipramine and cocaine effects. It is also suggested that fenazoxine possesses antinoradrenaline activity at higher concentrations. (25 ref.)—*Journal abstract.*

9508. Blackman, A. & Spencer, S. J. (U. Aston, Birmingham, England) **The effects of oestrogens and progestins on the response of mice to barbiturates.** *British Journal of Pharmacology*, 1969(Sep), Vol. 37(1), 129-139. Mestranol (estrogen) prolonged, while lynestrenol (progestin) reduced, the duration of pentobarbitone and hexobarbitone sleep, while the effects of barbitone were not altered. Ss were 16 male and 16 female albino mice. The effects of these drugs are presented and discussed. It is concluded that these steroids alter the duration of action of pentobarbitone and hexobarbitone by changing the rate of barbiturate metabolism. In the case of mestranol, this may be a combination of an effect upon basal metabolic rate (enhancing hypothermia) and a direct effect on the liver. An effect upon renal clearance cannot be excluded by these results. (21 ref.)—*Journal abstract.*

(Dept. de Ciencias Fisiológicas, Faculdade Medicina, Santa Casa Misericórdia, São Paulo, Brazil) **Effects of chronic administration of (+)-amphetamine on maze performance of the rat.** *Journal of Pharmacology*, 1969(Sep), Vol. 37(1), 79-86.—Studied the influence of (+)-amphetamine, given 1 min. after each training session, on the performance of 124 male Wistar rats in a Lashley III maze. The 1st-3 injections significantly improved naive Ss' learning ability. With prolonged treatment, maze performance was strongly impaired. Chronic administration to trained Ss produced the same adverse effect. Amylobarbitone sodium given to trained Ss 30 min. before training sessions blocked the adverse effect of (+)-amphetamine. (+)Amphetamine did not produce impairment of performance when given chronically 30 min. before training sessions to trained Ss. (18 ref.)—*Journal abstract.*

9510. Burov, Yu. V. (Inst. of Pharmacology, Moscow, USSR) **Proyavleniye reaktsii ugrozy i begstva, vyzvannykh elektricheskimi razdrazheniyami perednego gipotalamusa koshek, na fone deystviya psikhotropnykh veshchestv.** [Emergence of threat and flight reactions in cats, induced by electrical stimulation of the anterior hypothalamus superimposed upon the action of psychotropic drugs.] *Byulleten' Eksperimental'noi Biologii i Meditsiny*, 1970(May), Vol. 69(5), 66-69.—21 cats, with electrodes implanted in the anterior hypothalamus and paraventricular nucleus, were used in this study which employed the following drugs: 1-8 mg/kg chlorpromazine, 1-4 mg/kg trifluoperazine, 1-5 mg/kg perphenazine, 1-4 mg/kg haloperidol, 1-10 mg/kg imipramine, 80-100 mg/kg meprobamate, .5-3 mg/kg benactazine, 1-10 mg/kg chlordiazepoxide, and 1-6 mg/kg morphine. 3 mg/kg benactazine and 10 mg/kg chlordiazepoxide significantly increased the threshold of electrical stimulation for the threat reaction. 4 mg/kg haloperidol completely blocked the flight reaction. With a marked increase of stimuli, superimposed on the effect of haloperidol, instead of the flight reaction, components of the threat reaction were evoked—growling and hissing. All the drugs, with the exception of morphine, inhibited the autonomic components of the threat and flight reactions. These facts point to the region of the anterior hypothalamus and the paraventricular nucleus as loci of drug action with respect to the "emotional reactions" of threat and flight.—I. D. London.

9511. Burov, Yu. V. & Kurochkin, I. G. (Inst. of Pharmacology, Moscow, USSR) **Vliyanie kholinoliticheskikh veshchestv na reaktsiyu ugrozy koshki.** [Influence of cholinolytic agents on the threat reaction in the cat.] *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1970(Jul), Vol. 20(4), 668-670.—Attempted to determine through the use of pharmacological agents the neurodynamic nature of the threat reaction in cats, evoked by electrical stimulation of the paraventricular nucleus and anterior region of the hypothalamus. Out of 6 possible mediators of the CNS investigated, only acetylcholine evoked the external signs of threat. Cholinolytic agents were then employed to determine the specific nature of this effect. It is shown that anterior hypothalamic injections of acetylcholine and of the chemically close cholinomimetic agent, carbacholine, produced the threat reaction—one which is probably a specific reaction since the cholinolytic agents, amizyl and atropine, prevented its development and, on local application, served to raise the threshold of electrical stimulation for its emergence.—I. D. London.

9512. Bynum, T. E., Ruoff, Paul A., Richert, John, &

Wolf, Stewart. (Tott's Gap Inst., Bangor, Pa.) **The smoke reflex in rabbits: An example of autonomic control of cardiorespiratory function.** *Conditional Reflex*, 1970(Oct), Vol. 5(4), 233-240.—Discusses aspects of autonomic behavior as reflected in the "smoke reflex" in 40 rabbits. Allowing smoke to envelop the nostrils of an S resulted in prompt apnea, bradycardia, diminution of peripheral pulse, and elevation of systemic blood pressure. Atropine and vagotomy, or both, mitigated the bradycardia, but the combined effect of propranolol and vagotomy was required to abolish bradycardia. Phenoxylbenzamine (dibenzylamine) alone blocked only the peripheral vasoconstriction and pressor response. The combination of vagotomy, propranolol, and phenoxylbenzamine blocked all manifestations of the reflex with the exception of apnea. A classical concept holds that responses of the autonomic nervous system must be either distinctly adrenergic (sympathetic) or cholinergic (parasympathetic), and that visceral regulation is achieved by an antagonism between the 2. This study introduces contrary evidence. In certain adaptive behavior there is a patterned response that includes activation of discrete elements of both cholinergic and adrenergic divisions, as well as inhibition of 1 component of the latter. (17 ref.)—*Journal abstract*.

9513. Caujolle, F., Chanh, Pham H., & Pène, A. M. (Centre National de la Recherches Scientifiques, Toulouse, France) **Recherches pharmacodynamiques sur le di-(p-méthylbenzèneboronate) de pentaerythritol.** [A pharmacological study of pentaerythritol di-(p-methylbenzeneboronate).] *Agressologie*, 1969, Vol. 10(2), 145-153.—Studied the action of pentaerythritol di-(p-methylbenzeneboronate) on the CNS, the cardiovascular system, and on ventilation. Results are summarized: (a) pentaerythritol di-(p-methylbenzeneboronate) has no hypnotic effect; however, it potentiates, in this instance, chloral hydrate and hexobarbital. This action is not accompanied by any central analgesic or local anesthetic effect. (b) Pentaerythritol di-(p-methylbenzeneboronate) acts as an anticonvulsant on metrazol and ECT seizures, but without any effect on strychnine seizures. (c) Its hypothermic effect is weak and transitory. (d) Pentaerythritol di-(p-methylbenzeneboronate) causes a substantial decrease in general arterial pressure. It is a peripheral vasodilator; depresses the cardiac contractile activity and inhibits the hypertensive action of exogenous amines and indirect amines. And (e) pentaerythritol di-(p-methylbenzeneboronate) reduces amplitude and slows down ventilation. (16 ref.)—*English abstract*.

9514. Cole, Sherwood O. (Rutgers State U., Camden) **Note on amphetamine and food-motivated discrimination.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 774.—Studied the effects of .5 or 1 mg/kg d-amphetamine sulfate on the learning of food-motivated discrimination. A previous experiment with 2 mg/kg by S. Cole (see PA, Vol. 42:6843) had shown retardation of learning. Results of this study with 12 male albino rats indicate that while both dosages mildly facilitated discrimination during CRF, the overall operant rates were significantly depressed ($p < .01$). It is concluded that "the effect of amphetamine on food-motivated discrimination is dose dependent."—S. Knapp.

9515. Czech, Donald A. (Syracuse U.) **The effect of ether on "salt arousal" of drinking in the hooded rat.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3855.

9516. Davenport, John W. (U. Wisconsin, Regional Primate Research Center) **Cretinism in rats: Enduring behavioral induced by tricyanoaminopropene.** *Science*, 1970(Feb), Vol. 167(3920), 1007-1009.—Reports that pregnant albino Holtzman rats reared on diets containing tricyanoaminopropene, the antithyroid compound that stimulates RNA synthesis, showed a deficit in performance on automated closed-field maze tests many wk. after discontinuation of the drug. Ss were also tested while still receiving the drug, and performance deficits were indicated in tests of Y-maze reversal and manual closed-field maze performance; Ss treated with the drug and with thiouracil behaved in a highly similar fashion on several tasks. No evidence of facilitation by tricyanoaminopropene appeared in any of the 8 learning situations used. Exposure to tricyanoaminopropene before and after birth, at doses sufficient to produce anatomical cretinism, apparently induces an enduring behavioral deficit which is similar to that of neonatal thyroidectomy-induced cretinism in rats and which parallels the mental retardation associated with human cretinism. (17 ref.)—*Journal abstract*.

9517. Davis, Virginia E. & Walsh, Michael J. (Veterans Administration Hosp., Houston, Tex.) **Alcohol, amines, and alkaloids: A possible biochemical basis for alcohol addiction.** *Science*, 1970(Feb), Vol. 167(3920), 1005-1007.—Tetrahydropapaveroline is a benzyltetrahydroisoquinoline alkaloid derivative of the biogenic amine, dopamine. Alcohol, by way of its primary metabolite, acetaldehyde, competitively inhibits nicotinamide-adenine dinucleotide-linked aldehyde dehydrogenase and augments the formation of tetrahydropapaveroline in vitro. The limited capacity of brain to oxidize aldehydes may be of pharmacological importance because it facilitates the production of tetrahydropapaveroline in the presence of drugs which inhibit this enzyme. (16 ref.)—*Journal abstract*.

9518. Fennessy, M. R., Heimanns, L. H., & Rand, M. J. (U. Melbourne, Victoria, Australia) **Comparison of effect of morphine-like analgesics on transmurally stimulated guinea-pig ileum.** *British Journal of Pharmacology*, 1969(Oct), Vol. 37(2), 436-449.—Morphine-like analgesic drugs caused depression of twitches of the isolated guinea pig ileum in response to transmural electrical stimulation. Drugs included codeine, diamorphine, fentanyl, morphine, morphine-N-oxide, normorphine, oxymorphone, pethidine, phenazocine, and phenoperidine, nalorphine, and pentazocine. With 1st application, the extent of depression of twitches was proportional to concentration. There was no further depression when an additional drug was added to the organ bath, except with pethidine. With the 2nd application, tolerance developed. With pethidine, tolerance was not observed. The reactions of the ileum to the various drugs are presented and discussed. Observations are discussed in relation to analgesic activity, and dependence in man. (20 ref.)—*Journal abstract*.

9519. Ferguson, James, et al. (Stanford U., Medical School) **"Hypersexuality" and behavioral changes in cats caused by administration of p-chlorophenylalanine.** *Science*, 1970(Apr), Vol. 168(3930), 499-501.—Systematically observed the behavior of 26 male cats before, during, and after daily administration of the tryptophan hydroxylase inhibitor, p-chlorophenylalanine. These observations established that "hypersexuality," increased aggression, and perceptual disorientation are sequelae of the chronic administration of the drug in cats. (21 ref.)—*Journal abstract*.

9520. Forrester, I. S., Kosek, J. C., Aber, R. C., & Serra, M. T. (Veterans' Administration Hosp., Biochemical Research Lab., Palo Alto, Calif.) **Rabbit as model for chlorpromazine-induced hyperpigmentation of the skin.** *Biochemical Pharmacology*, 1970(Mar), Vol. 19(3), 849-852.—Produced hyperpigmentation of exposed areas, comparable to that seen in less than 1% of patients chronically dosed with chlorpromazine after intensive long-term therapy, in 16 out of 16 chronically dosed pigmented Dutch Belt and Flemish Giant adult female rabbits, receiving between 20-30 mg/kg/day. 30-min ultraviolet irradiation of a clipped or shaved area produced clear-cut hyperpigmentation of naturally pigmented skin areas in about 4 wk. The characteristic occurrence of granular pigment in the dermis which is normally free of pigment was also observed. Hyperpigmented Ss did not develop any concomitant ocular pathology, as seen in some patients on long-term, high-dosage chlorpromazine therapy.—*Journal abstract.*

9522. Goldstein, M., Battista, A. F., Nakatani, S., & Anagnoste, B. (New York U., Medical School) **Drug-induced relief of experimental tremor in monkeys.** *Neurology*, 1970(Nov), Vol. 20(11, Pt. 2), 89-95.—Drugs which affect the disposition, metabolism, and biosynthesis of dopamine and serotonin were tested for their effects on the tremor intensity in monkeys with mesencephalic lesions. The tremor in the monkeys was temporarily relieved by the administration of dopa or 5-hydroxytryptamine. The effects of various antiparkinsonian drugs were related to their anticholinergic properties and to their ability to inhibit the uptake of striatal dopamine.—*F. O. Triggs.*

9523. King, Alan R. (Medical Research Council, Neuropharmacology Unit, Birmingham, England) **Drive related effects of amylobarbitone and chlorpromazine on appetitive and aversively controlled behavior in the rat.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1365-1371.—Systematically varied the intensity of shock and water deprivation in 3 experiments in order to examine their effects on 2 kinds of instrumental behavior possibly related to the CER. Amylobarbitone sodium (10 and 20 mg/kg) and chlorpromazine (.375 and .750 mg/kg) were administered in stimulus intensity condition to 18 male albino rats. Similar effects were obtained with both drugs, water deprivation interacting with each drug in an additive manner, whereas shock intensity showed a multiplicative relationship. Since both drugs had similar effects, it was concluded that the type and intensity of stimulus control were not variables which would distinguish between the actions of amylobarbitone and chlorpromazine on the CER. It was found that shock avoidance became more sensitive to both drugs with decreasing stimulus control whereas the water deprivation effect remained constant. On the basis of other experiments it is concluded that the greater sensitivity of shock avoidance was due to the temporal structure of the response which has similar characteristics to responses which occur in a fixed-interval reinforcement schedule. (24 ref.)—*Journal abstract.*

Dissertation Abstracts International, 1970(Feb), Vol. 30(8-B), 3891.

9525. Manani, G., et al. (General Hosp., Padua, Italy) **Mechanism of action of ajmaline on neuromuscular junction.** *Agressologie*, 1970, Vol. 11(3), 275-282.—Studied ajmaline activity on frenic-diaphragm preparations where it is shown to induce a Wedensky-like inhibition. EMG studies demonstrate that ajmaline is a neuromuscular blocking agent, but its action is different from the action of both competitive and depolarizing drugs. Chemical studies document a direct interaction between ajmaline and acetylcholine in vitro and to a similar interaction is ascribed the mechanism of action of ajmaline in vivo. (French, German, & Spanish summaries)—*Journal abstract.*

9526. Marcus, R. J., Wetterberg, L., Yuwiler, A., & Winters, W. D. (U. California, Medical School, Los Angeles) **Electroencephalographic and behavioral effects of experimental porphyria in the rat.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 602-607.—Investigated the relationship of allylisopropylacetamide (AIA) induced porphyria to changes in biochemical, behavioral, and CNS function. The possible central effect of the porphyrin precursor δ -aminolevulinic acid (ALA) was also studied. EEG and behavior were observed and urine collected from freely moving female Long-Evans rats with chronically implanted cortical electrodes. A single dose of 400-500 mg/kg of AIA induced a reversible progression of EEG changes characteristic of CNS excitation and elevated urinary levels of ALA and porphobilinogen. Repeated daily injections of 400 mg/kg of AIA led to a progressive reduction in the duration and degree of EEG and behavioral changes and a reduction of porphyria. ALA, 400 mg/kg, did not produce any abnormal EEG or behavioral effects. Similarities between the effects of AIA and hallucinogenic and cataleptoid agents are noted. (French summary) (25 ref.)—*Journal summary.*

9528. McGaugh, James L. & Krivanek, Jara A. (U. California, School of Biological Sciences, Irvine) **Strychnine effects on discrimination learning in mice: Effects of dose and time of administration.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1437-1442.—Examined in Exp. I the dose response effects of posttrial injections of strychnine sulphate (.012-1.25 mg/kg) on learning in 60 male and 60 female Swiss-Webster mice. Injections were given each day immediately after 3 massed training trials on a food reward visual discrimination task. Facilitation was found with low (.25, .05, .10 mg/kg) and high (1 and 1.25 mg/kg) doses, but not with intermediate doses (.20, .40, .80 mg/kg). Exp. II examined the effects on 138 male and 138 female Swiss-Webster mice of time of pre- or posttrial drug injection of 2 doses: .10 and 1 mg/kg. With both doses significant facilitation of learning was obtained with posttrial injection intervals of 1 hr. or less. With 1 mg/kg facilitation was obtained with all pretrial injection times examined (longest interval was 1 hr.). With .10 mg/kg significant facilitation was obtained with injections given 30 min. but not 60 min. pretrial. These findings are interpreted as providing further evidence that strychnine

facilitates learning by affecting posttrial neurobiological processes underlying memory storage. (32 ref.)—*Journal abstract*.

9529. McMillan, D. E., Harris, Louis S., Frankenheim, J. M., & Kennedy, James S. (U. North Carolina, Medical School, Chapel Hill) **1- Δ^9 -trans-tetrahydrocannabinol in pigeons: Tolerance to the behavioral effects.** *Science*, 1970(Jul), Vol. 169(3944), 501-503.—Injected Δ^9 -tetrahydrocannabinol daily, in increasing doses, into 2 pigeons under a multiple schedule of food presentation. Within a wk., a dose that initially abolished responding completely was without effect. This dose was gradually increased to 20 times its original value without disrupting the behavior. No withdrawal syndrome was detected when the cannabinol was discontinued.—*Journal abstract*.

9530. Meldrum, B. S., Balzano, E., Gadea, M., & Naquet, R. (Medical Research Council, Neuropsychiatry Unit, Carshalton, England) **Photic and drug-induced epilepsy in the baboon (*Papio papio*): The effects of isoniazid, thiosemicarbazide, pyridoxine and amino-oxyacetic acid.** *Electroencephalography & Clinical Neurophysiology*, 1970(Oct), Vol. 29(4), 333-347.—Administered iv drugs modifying γ -aminobutyric acid metabolism to 12 baboons manifesting photosensitive epilepsy. Isoniazid (INH) and thiosemicarbazide (TSC) increased the tendency of the Ss to respond to intermittent light stimulation (ILS) with generalized myoclonus or tonic-clonic seizures. Pyridoxine did not diminish the tendency of the Ss to respond to ILS with generalized myoclonus. Pyridoxine given before INH did not modify its effects, but did completely block seizures normally produced by TSC. Amino-oxyacetic acid (AOAA) had a marked protective effect against myoclonus induced by ILS, but spontaneous or ILS-induced cortical spikes or spikes and waves were not diminished. The occurrence of multiple seizures and the shift to an occipital point of origin for the seizures after INH and TSC suggest that it is unlikely that the same biochemical derangement is responsible for the photically- and drug-induced seizures. The persistence of spontaneous spikes and waves after AOAA suggests that this drug does not correct the primary abnormality but modifies its clinical expression. (French summary) (35 ref.)—*Journal summary*.

9531. Meldrum, B. S., Naquet, R., & Balzano, E. (Medical Research Council, Neuropsychiatric Research Unit, Carshalton, England) **Effects of atropine and eserine on the electroencephalogram, on behaviour and on light-induced epilepsy in the adolescent baboon (*Papio papio*).** *Electroencephalography & Clinical Neurophysiology*, 1970(May), Vol. 28(5), 449-458.—Administered iv injections of atropine or eserine to 12 conscious adolescent baboons (*Papio papio*) selected for a range of photosensitivity and observed the effects on the EEG, behavior, and myoclinic responses to intermittent light stimulation (ILS). The classical alerting effects produced by eserine were maximal 5-10 min. after injection and were accompanied by a sustained high voltage fronto-Rolandic rhythm resembling human μ rhythm in morphology and reactivity. Periods of agitation and sedation were seen after atropine injection. Sedation was most marked 20-60 min. after injection, with an enhancement of EEG paroxysmal features. Spikes and poly-spikes and waves occurred predominately in the fronto-Rolandic cortex, but also

more diffusely. Enhancement of amplitude and frequency of lambda waves, which appeared in sustained bursts during agitation phases, began 1-3 min. after injection and continued for several hr. Ss with high, low, and variable photosensitivity continued to display their characteristic responses to ILS. It is concluded that the paroxysmal motor responses of baboons to ILS are not determined by the degree of activity in cholinergic nonspecific cortical afferent or cortico-cortical cholinergic systems. (French summary) (27 ref.)—*Journal summary*.

9532. Miller, F. P., Cox, R. H., Snodgrass, W. R., & Maickel, R. P. (Lakeside Lab., Milwaukee, Wis.) **Comparative effects of p-chlorophenylalanine, p-chloroamphetamine and p-chloro-N-methylamphetamine on rat brain norepinephrine, serotonin and 5-hydroxyindole-3-acetic acid.** *Biochemical Pharmacology*, 1970(Feb), Vol. 19(2), 435-442.—The time-course of effects of a single dose of p-chlorophenylalanine on rat brain amines shows a significant lowering of serotonin (5HT) and 5-hydroxyindole-3-acetic acid (5HIAA) beginning on Day 1 and lasting for about 8 days. In most brain areas, levels of norepinephrine (NE) are also lowered significantly on Days 1 through 5. In contrast, both p-chloroamphetamine and p-chloro-N-methylamphetamine decrease brain 5HT and 5HIAA, beginning at 2-4 hr. after dosage and continuing for > 4 days, with no depleting effect on brain NE.—*Journal summary*.

9533. Morrison, Cathleen F. & Stephenson, Jane A. (Tobacco Research Council Lab., Harrogate, England) **Drug effects on a measure of unconditioned avoidance in the rat.** *Psychopharmacologia*, 1970, Vol. 18(2), 133-143.—Rats avoided the elevated open-sided arm of a Montgomery Y maze in which the other 2 arms were enclosed by walls. Tranquilizers and barbiturates reduced avoidance of the open-sided arm and increased total activity. Chlorpromazine did not affect avoidance, and amphetamine and nicotine reduced high and increased low avoidance levels.—*Journal abstract*.

9534. Mulé, S. J. (New York State Narcotic Addiction Control Commission, New York) **Morphine and the incorporation of 32 orthophosphate in vivo into phospholipids of the guinea pig cerebral cortex, liver and subcellular fractions.** *Biochemical Pharmacology*, 1970(Feb), Vol. 19(2), 581-593.—Morphine stimulated the incorporation of 32 orthophosphate into whole cerebral cortex phospholipids 119% at 16 hr. and 87% at 24 hr. after 32 orthophosphate as determined by total radioactivity measurements. A significant stimulation of the incorporation of 32 orthophosphate ranging from 41-207% occurred at 16 and 24 hr. with individual phospholipids. No statistically significant effect was observed with total radioactivity data obtained from whole liver, although significance was observed with phosphatidylinositol and phosphatidic acid at later time intervals. A predominantly stimulatory effect on phospholipid metabolism was obtained with total radioactivity determinations on the subcellular fractions of the cerebral cortex. Morphine had both an inhibitory and stimulatory effect on the total radioactivity determinations of mitochondrial subfractions from the cerebral cortex at 16, 24, and 48 hr. A similar effect was observed with mitochondrial fractions subjected to osmotic shock. It is concluded that morphine alters phospholipid metabolism in vivo and thus may directly affect cellular

function in liver and neuronal activity in the CNS. (38 ref.)—*Journal summary*.

9535. Nachman, Marvin; Lester, David, & Le Magnen, Jacques. (U. California, Riverside) **Alcohol aversion in the rat: Behavioral assessment of noxious drug effects.** *Science*, 1970(Jun), Vol. 168(3936), 1244-1246.—Injections of p-chlorophenylalanine or n-butylaloxime given after 48 male Wistar rats were 1st given a 10-min drinking test with saccharin or ethanol solutions produced a learned aversion to these solutions. Findings suggest that the reduced self-selection of alcohol (preference) resulting from the administration of these drugs, reported by others, is not specifically alcohol-related. The technique described offers a sensitive procedure for the assessment of unpleasant effects of drugs.—*Journal abstract*.

9536. Prinz, Patricia A. (Stanford U.) **Pharmacological alterations of patterns of sleep and wakefulness in the cat.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3794-3795.

9537. Rodin, E., et al. (Lafayette Clinic, Neurological Research Div., Detroit, Mich.) **Neurophysiological mechanisms involved in grand mal seizures induced by metrazol and megrimide.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 62-72.—Studied electroclinical correlations during metrazol (pentylentetrazol) or megrimide (bemegrid) induced grand mal seizures in 57 cats. Conventional EEG tracings suggested that earliest and maximal seizure activity occurred in the cerebral cortex or thalamus, but photographs of the Ss' behavior failed to show consistent relationships between any aspect of the EEG and behavior. High frequency activity recorded from cortical and intracerebral structures showed good relationships with the Ss' behavior. Clinical myoclonic jerking was associated with large amplitude bursts of high frequency activity maximally in the brainstem reticular formation, a generalized seizure occurring when the discharge became continuous. The clonic phase of the generalized seizure was characterized by bursts of high frequency activity which gradually decreased in duration and amplitude toward the end of the seizure. The paralyzed and unanesthetized Ss showed less intense activity, and the maximum of seizure activity was in the thalamus and cortex. It is concluded that the recording of high-frequency discharges adds a valuable dimension to electroclinical correlations, and that the functional state of the S may be an important variable in the amount and relative distribution of seizure activity. (French summary) (21 ref.)—*Journal summary*.

9538. Salama, A. I. & Goldberg, M. E. (Union Carbide Corp., Tuxedo, N.Y.) **Neurochemical effects of imipramine and amphetamine in aggressive mouse-killing (muricidal) rats.** *Biochemical Pharmacology*, 1970(Jun), Vol. 19(6), 2023-2032.—Mouse killing (muricidal) rats have higher forebrain levels of norepinephrine than control nonkiller Ss and elicit higher rate constants for the decline of ³H-norepinephrine given intraventricularly into the brain, consequently, with much higher turnover rates for norepinephrine than controls. These differences have not been obtained in the hindbrain region. No differences in the levels or rate of turnover of serotonin were observed in either brain region studied. The elevated rate constant seen in forebrain norepinephrine turnover studies using the isotopic procedure was not observed in nonisotopic turnover studies in which a α -methyl-p-tyrosine was used

to inhibit tyrosine hydroxylase. Differences between the 2 methods may be attributable to the inhibitory action of muricidal behavior by α -methyl-p-tyrosine. The effects of imipramine and amphetamine on norepinephrine turnover in the forebrain of killer Ss were compared with those of drug-treated, nonkiller and with untreated Ss. Both agents, given at doses which inhibit mouse-killing behavior, accelerate the turnover rate of brain norepinephrine in nonkiller Ss, but do not influence the previously elevated levels of norepinephrine nor the elevated rate constants and turnover rate for this amine in killer Ss. Suggestions involving altered reuptake mechanisms, as well as divergent effects of the antidepressants in muricidal Ss, are offered to explain these differences. (38 ref.)—*Journal abstract*.

9539. Schildkraut, Joseph J., Schanberg, Saul M., Breese, George R., & Kopin, Irwin J. (Harvard Medical School, Massachusetts Mental Health Center, Boston) **Effects of psychoactive drugs on the metabolism of intracisternally administered serotonin in rat brain.** *Biochemical Pharmacology*, 1969(Aug), Vol. 18(8), 1971-1978.—Examined the effects of various psychoactive drugs on the metabolism of radioactive serotonin administered intracisternally in rat brain. Ss were Sprague-Dawley rats. More radioactive serotonin was retained in the brains of Ss anesthetized with pentobarbital during the intracisternal injection than in Ss anesthetized with ether. Prior treatment with pargyline increased levels of intracisternally administered serotonin-³H and decreased its deaminated metabolites; reserpine decreased levels of serotonin-³H. Imipramine slowed the disappearance of radioactive serotonin from brain. Chlorpromazine increased, whereas LSD decreased, the levels of radioactive deaminated metabolites of previously injected serotonin-¹⁴C in brain. When lithium chloride was administered after the intracisternal injection of serotonin-¹⁴C, levels of radioactive serotonin and deaminated metabolites in brain were increased above control values. Findings are discussed in relation to studies of the actions of these drugs on the metabolism of endogenous serotonin in brain, and to previous studies of the effects of these drugs on the metabolism of intracisternally administered norepinephrine. (25 ref.)—*Journal abstract*.

9540. Schmidt, Hans; Summe, James P., & Coby, William F. (Xavier, U., Cincinnati, O.) **Phenobarbital withdrawal and behavioral disruption in the rat.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1473-1479.—Found in Exp. I that 40 male albino rats given 70 mg/kg phenobarbital for 15 days after learning a locomotor response showed only gradual improvement in responding when the phenobarbital was withdrawn. A 5-day delay without practice resulted in very similar improvement as was gained by practice. This indicates a spontaneous diminution of a withdrawal effect which retards behavior. Comparable findings were obtained during the treatment period itself indicating an evolution of the response contingent upon the response to the drug. Exp. II with 40 male and female hooded rats employed training under the influence of phenobarbital and found insignificant improvement in responding after a 7-day delay as compared with no delay. Marked improvement in responding after 7- and 30-day delays as compared with no delay was found in Exp. III, with 50 albino male rats. This latter result suggests that there is a time dependent factor which directly interferes with responding during barbiturate withdrawal. While the data do not

totally negate state dependent learning, some methodological issues about it are raised.—*Journal abstract.*

9541. Spencer, P. S. & Turner, T. A. (U. Aston, Birmingham, England) **Blockade of biogenic amine synthesis: Its effect on the responses to leptazol and dexamphetamine in rats.** *British Journal of Pharmacology*, 1969(Sep), Vol. 37(1), 94-103.—Convulsions produced by leptazol were potentiated by prior treatment with dexamphetamine in adult male Wistar albino rats. An intact dopamine synthesis was necessary for the potentiation of the convulsive action of leptazol. An intact noradrenaline synthesis was not necessary for this action of amphetamine as long as the dopamine synthesis was intact. An intact 5-hydroxytryptamine synthesis was not necessary for the potentiation to be shown. Blockade of either noradrenaline, dopamine, or 5-hydroxytryptamine synthesis had no effect on leptazol convulsions. It is suggested that an intact 3-4 dihydroxyphenylalanine synthesis rather than an intact dopamine synthesis is involved. (33 ref.)—*Journal abstract.*

9542. Stolk, Jon M., Nowack, William J., Barchas, Jack D., & Platman, Stanley R. (Stanford U., Medical School) **Brain norepinephrine: Enhanced turnover after rubidium treatment.** *Science*, 1970(Apr), Vol. 168(3930), 501-503.—In 2 experiments with male Long-Evans rats, in groups of 16 and 6, it was found that after biosynthesis of norepinephrine was inhibited, treatment of Ss for 10 days with rubidium chloride (6 milliequivalent/kg of body weight) caused an increase in the rate of disappearance of norepinephrine in the brainstem but not in the telencephalon. Also the utilization of intracisternally injected tritiated norepinephrine was increased and was accompanied by a shift in the pattern of norepinephrine metabolism to normetanephrine. Data suggest that greater amounts of neuronally stored norepinephrine were released to central adrenergic receptors.—*Journal abstract.*

9543. Weber, B., De Las Mulas Bejar, M., & Laborit, H. (Bouciaut Hosp., Lab. of Eutonology, Paris, France) **Localisation médullaire de l'activité d'un analgésique, l'Agr 614: Synergie et antagonisme vis-à-vis de la strychnine.** [The medullar localization of the action of an analgesic, Agr 614: Synergy with strychnine.] *Agressologie*, 1970, Vol. 11(3), 255-267.—Agr 614 (3-ethoxymorpholinyl-4-methyl-(2-naphthyl)-6-pyridazine hydrochloride) induces typical motor seizures in the mouse when it is combined with a nonconvulsive dose of strychnine. Glycine, which is a medullar inhibitor and whose action is inhibited by an ip injection of strychnine, delays the appearance of these seizures; sodium 4-hydroxybutyrate does not delay them. Conversely, strychnine does not improve the analgesia obtained with Agr 614, as is shown by the hot plate or peritoneal irritation tests. Results indicate that Agr 614 possesses a medullar effect which could result in an inhibitor of an inhibitor, thus producing analgesia and motor seizures. Physiological and pharmacological studies of the conduction pathways of the pain at the level of the spinal cord and its diffusion through the lemniscal pathway and multisynaptic pathways are suggested. (German, Spanish, & Russian summaries)—*English abstract.*

merdam Inst., Netherlands) **Blood pressure changes during mental load experiments in man.** *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 191-195.—Discusses several experiments showing an increase in systolic and diastolic blood pressure as a function of the amount of information handling/time unit. An auditive binary choice task (high or low tone in random sequence and of differing frequency to be answered by pressing a right or a left pedal) was used to evoke mental load. In short-term experiments, the rise in blood pressure was not very impressive and remained within the normal physiological range. There are some indications, however, that prolonged intensive mental load induces a more important increase in blood pressure. Increase in blood pressure, together with changes in other physiological phenomena, e.g., heart rate, sinus arrhythmia, etc., indicate that mental load may alter the level of activity of the autonomic nervous system.—*Journal summary.*

9545. Fichtel, K. (Inst. for Corticovisceral Pathology & Therapy, Berlin-Buch, E. Germany) **Ob osobennostyakh vyrabotki uslovnykh sosudorassh-iruyushchikh refleksov u cheloveka.** [On the features characterizing the elaboration of vasodilatational conditioned responses in man.] *Fiziologicheskii Zhurnal SSSR*, 1970(Apr), Vol. 56(4), 610-617. Ss were 8 16 38 yr. olds. A biphasic thermovascular response was evoked by utilizing arm baths of increasing temperature: a vasoconstrictive phase for temperatures of 32-34° C, followed by a vasodilatational phase for higher temperatures. Combining such arm immersions with prolonged acoustic stimulation in the form of tape-recorded music, it is possible to elaborate a vasodilatational CR to a stimulus, eliciting initially an orienting vasoconstrictive reaction. An odd byproduct of the study was the finding that the music, itself, exhibited a vasodilatational effect after many arm baths without pairing with music as stimulus. (English summary) (22 ref.)—*J. D. London.*

9546. Parolla, D. I. & Mikhailova, G. P. (Pavlov Inst. of Physiology, Leningrad, USSR) **Primenenie termograficheskoi metodiki dlya issledovaniya autoregulyatornoi reaktsii sosudov mozga.** [Application of the thermographic method for study of the cerebrovascular autoregulatory reaction.] *Fiziologicheskii Zhurnal SSSR*, 1970(Apr), Vol. 56(4), 625-631.—107 urethanized cats were used in a thermographic study to determine the possibility of ascertaining that level of critical arterial pressure, below which the reaction of circulatory autoregulation is no longer observed in the brain. In 63 Ss decrease of arterial pressure to the critical level of 41 ± 1.1 mm. Hg was not accompanied by a significant decrease in cerebral blood flow due to compensatory dilatation of the cerebral vessels. With further fall in arterial pressure the blood supply of the brain was diminished. Level of critical arterial pressure served as a quantitative criterion for evaluating the autoregulatory reaction of cerebral vessels. Thermographic utilization of this criterion was thereupon utilized to provide the basis for a further study to ascertain the influence of initial cerebrovascular tonus, iv injection of hemolytic blood, atropine (4 mg/kg), and inhalation of CO₂ on the cerebrovascular autoregulatory reaction. A sharp increase in the level of critical arterial pressure occurred with inhalation of CO₂ (the greater the concentration of CO₂, the greater the increase). Hemolytic blood also produced an increase. However, the level of critical arterial pressure was unaffected after

9548. Deaux, Edward & Kakolewski, Jan W. (Antioch Coll.) **Emotionally induced increases in effective osmotic pressure and subsequent thirst.** *Science*, 1970(Sep), Vol. 169(3951), 1226-1228.—Following a brief period of handling or enclosed rotation, 22 male Holtzman albino rats increased the frequency of drinking relative to eating. Handling also delayed or eliminated eating behavior in 36 hypoosmotic Ss. In further experiments with 11 Holtzman Ss and 12 hooded heterozygotic Ss of the Battleboro strain, osmometric analysis revealed a rapid increase in serum osmolality during stress which may account for the emergence of thirst and disruption of eating.—*Journal abstract.*

9549. Ledwith, F. (U. St. Andrews, Scotland) **The effects of hypoxia on choice reaction time and movement time.** *Ergonomics*, 1970(Jul), Vol. 13(4), 465-482.—Investigated the effects on choice RT and movement time of hypoxia (oxygen deprivation) induced by a reduction in total air pressure inside a decompression chamber. Ss were 32 18-38 yr. old air force personnel who were given no pretraining on the task used, were tested once at a pressure level equivalent to some altitude between ground level and 15,000 ft., and were given no information on the altitude attained. A variety of tasks were used with simple and complex spatial and code relationships between stimulus and response. In 3 experiments with 60 undergraduates in addition to Exp. 1 Ss, the most consistent finding was that from ground level to 7000 or 10,000 ft. there was a significant increase in RT and decrease in movement time. Above 10,000 ft., results were less consistent. It is suggested that in young adult Ss and in tasks of low mental load, the inverse variation of RT and movement time was quite consistent and was possibly a result of an unimpaired total response time plus a selective impairment of the time taken to initiate a response found only at intermediate altitudes. In tasks with more mental work involved, hypoxic impairment of total response time was found at altitudes as low as 5000 ft. Above 10,000 ft. there was little further impairment. The great discrepancy between these results and previous literature, and the additional finding of quicker response times with prolonged exposure to experimental conditions, were attributed to the separate analysis of RT and movement time and the use of naive Ss in a novel experimental design. (French & German summaries) (27 ref.)—*Journal abstract.*

9550. Smith, Robert M. & Hain, Jack D. (U. Alabama, Birmingham) **Relationship between somatization and effects of stress on electrogastric waveforms in humans.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 755-765.—Examined electrogastric waveforms of 20 human Ss in relation to conditions of response contingent avoidance of a noxious tone, altered feedback of successful and unsuccessful avoidance, nonresponse contingent aversive stimulation, and somatization scores on the Mini-Mult Test. Significant differences were observed in electrogastric waveform frequency measures between base line and tone periods. There was a significant difference for amplitude measures between trials based on presence and absence of tone, and in the interaction between presence and absence of tones and somatization. A trend was observed for amplitude in an interaction effect of successful vs. unsuccessful avoidance and high vs. low somatization.—*Journal abstract.*

9551. Zhukov, E. K. & Fedorov, V. V. (Sechenov Inst. of Evolutionary Physiology & Biochemistry, Leningrad, USSR) **Vliyaniye okhlazhdeniya na sokrashchenie skeletnykh myshts mlekopitayushchego.** [Influence of cooling on skeletal muscular contraction in the mammal.] *Fiziologicheskii Zhurnal SSSR*, 1970(Apr), Vol. 56(4), 575-581.—White rats were used in a comparative study of the values of the intensity and time parameters of the phasic and tonus-like contractions of skeletal muscles (mm. extensor digitorum longus, plantaris, and soleus as well as m. levator scapulae dorsalis) for temperatures of 20 and 37° C, i.e., the strength and velocity characteristics of single isometric contraction, isometric tetanus, and potassium contracture (80 and 160 mM KCl). With decrease in muscle temperature from 37 to 20° C, the magnitude of tension in single contraction underwent practically no change, but tension in maximal tetanus decreased somewhat. Together with this, time of premaximal single contraction was found to increase by 3.3-3.5 times, 1/2-life time of a single contraction by 3.5-4.5 times, but developmental time of maximal tetanus by 1.7-2.3 times. Duration of active-state decline increased by 2.4-2.9 times. With decrease in temperature from 37 to 20° C, the amplitude of K-contracture changed very slightly, premaximal developmental time of contracture increased by 1.3-2.3 times, while time of adaptational relaxation increased by 5-9 times. 9555. Goldstein, Harris S., Pardes, Herbert; Small, Arthur M., & Steinberg, Maurice D. (State U. New York, Downstate Medical Center, Brooklyn) **Psychological differentiation and specificity of response.** *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 97-103.—Investigated empirically the relationship between field dependence and specificity of physiological response by use of a visual attending task which elicited directional fractionation. GSR and heart rate were recorded from 10 field-independent (FI) and 10 field-dependent (FD) undergraduates before and during a visual attending period which consisted of looking for brief periods at a small light. Results are summarized as follows: (a) directional fractionation of response was demonstrated for all 20 Ss, (b) the GSR activity of FD Ss was at a higher level during the resting period than the FI Ss, (c) the GSR activity of the FI Ss showed a larger rise during the attending period than the FD Ss, and (d) the heart rate deceleration was larger for the FI Ss than for the FD Ss. (15 ref.)—*Journal abstract*.

9556. Kasl, Stanislav V., Brooks, George W., & Rodgers, Willard L. (Yale U., Medical School) **Serum uric acid and cholesterol in achievement behavior and motivation: I. The relationship to ability, grades, test performance, and motivation.** *JAMA: Journal of the American Medical Association*, 1970(Aug), Vol. 213(7), 1158-1164.—Examined the possible involvement of serum uric acid and serum cholesterol concentrations in the achievement behavior and achievement motivation of 149 male high school students and recent graduates. The study attempted to replicate and extend the existing body of data which has suggestively linked serum acid and achievement. Blood samples were collected from the Ss, and brief questionnaires administered. Also high school GPAs and IQ scores were obtained from school records as well as Ss' extracurricular activities. The major findings were: (a) uric acid showed a positive association with grades and with over-achievement (grades adjusted for IQ); (b) uric acid was positively related to performance on aptitude (speed) tests; and (c) a positive association was obtained between uric acid and the "slope" measure of achievement motivation, and a negative association between uric acid and test anxiety.—*Journal abstract*.

9557. Segraves, Robert T. (Vanderbilt U., Medical School) **Personality, body build and adrenocortical activity.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 405-411.—Data from 100 English male college students showed relationships between body build and urinary excretions and the dimensions on the Eysenck Personality Inventory, PEN Inventory, and the Markey-Nyman Temperament Schedule. Neuroticism was found with small, feminine, and narrow-shouldered men. Psychoticism had a negative relation to muscularity as did extroversion with hip width. An environment-physique interaction hypothesis is rejected for the more likely idea that hormone or neural differences could affect both personality and growth. A urine difference (ratio of total 17-oxogenic excretion to 17-oxosteroid excretion) for extroversion adds to the large body of

evidence that strongly suggests endocrinological correlates of personality. (39 ref.)—*R. L. Sulzer*.

9562. Jeddi, Essedik. (Lyon Dept. of Physiology, France) **Confort du contact et thermoregulation comportementale.** [Contact comfort and behavioral thermoregulation.] *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1487-1493.—Placed 8 newborn dogs in the presence of 2 metallic artificial mothers, 1 of which was covered with fur. In a neutral ambient temperature, Ss chose comfortable contact with the fur. This observation is in agreement with H. F. Harlow's studies on newborn monkeys. When the metallic mother was warmed and the fur metallic mother was cooled, however, S preferred the warmed metallic mother. The newborn's research for contact with a natural mother could therefore be related to behavioral thermoregulation. A semantic study indicated that the thermoregulatory concept of cold is associated with displeasure in Arabic, Bambara, French, and Wolof people. Pleasure in these people was associated with words related to warmth or heat. In phases of affective regression in 4 schizophrenic children, a behavior related to previous observations in young dogs of comfort contact was observed: the children searched for contact with fur or for contact with a warm radiator. This behavior is interpreted as an adaptive regression to the primitive mechanism of the newborn-mother relationship: a thermoregulatory mechanism. (27 ref.)—*English summary*.

9564. Kawamichi, Takeo. (Hokkaido U., Zoological Inst., Sapporo, Japan) **Behaviour and daily activities of the Japanese pika, *Ochotona hyperborea yessoensis*.** *Journal of the Faculty of Science, Hokkaido U., Series VI, Zoology*, 1969(Sep), Vol. 17(1), 127-151.—Owing to their peculiar habits, involving

stenotopic habitat preference, production of characteristic calls, and hoarding of food for winter, the pikas have attracted the attention of many naturalists. Nevertheless, knowledge of their ethology, sociology, and ecology is still far from complete. This is also true for the Japanese pika. Reasons for the lack of precise information are (a) their habitat preference for high altitudes or barren lands, hardly accessible to research workers; and (b) the difficulty of rearing them under laboratory conditions, because of their high susceptibility to pneumonia and aspergillosis. (19 ref.)—*Journal abstract.*

COMPARATIVE PSYCHOLOGY

9565. Drewe, E. A., Ettlinger, G., Milner, A. D., & Passingham, R. E. (Inst. of Psychiatry, London, England) **A comparative review of the results of neuropsychological research on man and monkey.** *Cortex*, 1970(Jun), Vol. 6(2), 129-163.—"A comparative review of the neuropsychological evidence from man and non-human primates. It concentrates on those areas of research in which evidence is found for possible qualitative differences between man and monkey in the neural basis of behavior. This paper is divided into 2 major sections, the 1st part is a review of the evidence relating to 'associative' and other areas of the cerebral cortex; the 2nd, a review of the evidence from the study of language and non-verbal behaviour. Unilateral visual neglect is found after unilateral parietal damage in man but not in monkey. Furthermore, the misreaching reported after unilateral parietal damage in man is found only in the contralateral half-field whereas the misreaching studied in monkeys after unilateral ablation is found in either visual half-field but only with the hand contralateral to the ablation. The differences between the results of neuropsychological studies on man and monkey reviewed in this paper suggest the need for caution in generalizing from monkey to man in such research. Further comparative research is desirable to establish those areas within which such generalization may be valid."—R. Gunter.

9566. Michael, Charles R. (Yale U., Medical School) **Retinal processing of visual images.** *Scientific American*, 1969(May), Vol. 220(5), 105-114.—Discusses aspects of retinal transformation and integration of visual images among various species of animals. 2 principal types of visual systems are identified: (a) in the frog, rabbit, and ground squirrel, "the individual ganglion cells of these animals are usually highly specialized in terms of stimulus requirements, and fundamental variables, e.g., edges, color, contrast, orientation, and directional movement, are processed intensively within the retina"; and (b) in cats, monkeys, and presumably man, the ganglion cells in the retina "are concerned only with the simultaneous contrast between the centers and the surrounds of their receptive fields, and in some cases with color information." In the latter group, aspects of edge detection, orientation, and directional selectivity are dealt with only in the visual cortex, and then in a detailed and precise manner. The presence or absence of a visual cortex is given as a factor in explaining the differences between these 2 visual systems.—P. McMillan.

NATURAL OBSERVATION

EARLY EXPERIENCE

9567. Russell, P. A. (King's Coll., Aberdeen, Scotland.) **"Infantile stimulation" in rodents: A consideration of possible mechanisms.** *Psychological Bulletin*, 1971(Mar), Vol. 75(3), 192-202.—Reviews 4 major types of hypothesis concerned with the mediation of the effects of handling or otherwise treating infant rodents and some evidence bearing on them. Existing experiments do not allow a clear statement of the possible roles of (a) tactile stimulation (direct action), (b) hypothermia, (c) maternal behavior, and (d) stress. These hypotheses may not be mutually incompatible, and some possible lines of synthesis are suggested. Conceptual problems attaching to them are emphasized regarding the choice between a relatively nonspecific theory ("total stimulus input," "stress") or 2 or more separate mechanisms (hypothermia, tactile stimulation). It is suggested that the solution may come from a clearer understanding of the physiological systems affected by treatment. (43 ref.)—*Journal abstract.*

INSTINCTS

9569. Bjerke, Tore & Bjerke, Lelf G. (U. Oslo, Psychological Inst., Norway) **Note: Imprintability of Goldeneyes (*Bucephala clangula*).** *Psychological Reports*, 1970(Dec), Vol. 27(3), 981-982.—Exposed 17 Goldeneye ducklings to traditional audiovisual and auditory training stimuli 12-20 hr. after hatching. None of the Ss followed the stimuli, which suggests differences in the mechanisms mediating species-identification between this species and the earlier studied Wood duck (*Aix sponsa*). The differences are ascribed to the emotional development of Goldeneyes, since all Ss showed a high level of fear responding during testing.—*Journal abstract.*

MOTIVATION & EMOTION

9570. Boyaner, H. G. (Laval U., Montreal, Quebec, Canada) **Effect of REM sleep deprivation on exploration in rats.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 918.—10 rats deprived of REM sleep by the island method showed no significant differences in exploration (entries and rearings) on subsequent testing after 1, 2, 3, and 4 days of REM deprivation in a Y maze as compared to 10 controls.—*Author abstract.*

9571. Bruning, James L. & Parker, Vivian J. (Ohio U.) **Altruism in rats?** *Psychological Reports*, 1970(Dec), Vol. 27(3), 993-994.—Approach toward a squealing, distressed animal was not observed in 10 laboratory rats, indicating that there is no basis to conclude that altruistic behavior exists in rats.—*Journal abstract.*

9572. Ezinga, Gerard & Becker, Gilbert. (U. Manitoba, Winnipeg, Canada) **Is hunger drive held constant in the behavior experiment employing a fixed food-deprivation schedule?** *Psychological Reports*, 1970(Dec), Vol. 27(3), 735-742.—Reports body-weight curves based on 4 fixed-amount and 4 fixed-time maintenance schedules. An examination of the literature, using those curves as criteria, suggested an unequivocal "no" to the question posed in the title. The same curves

can serve as one basis for more knowledgeably designed experiments in which fixed-deprivation schedules are deemed necessary or convenient.—*Journal abstract.*

9573. Fischer, Gloria J. (Washington State U.) **Developmental changes in chick approach preference for social and food stimuli.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 155-157.—White leghorn chicks 4-10 days old were given choice preference trials in a T maze with other chicks visible on 1 side and food visible and available on the other side. $\frac{1}{3}$ of the Ss in each age group were tested when hungry, another 3rd when hungry and socially deprived (4-hr isolation from brooder mates), and the remaining 3rd were nondeprived when tested. The nondeprived Ss in all age groups showed a high and persistent preference for social stimuli over food. Hungry Ss, however, preferred food stimuli after the 4th day. Hungry and socially deprived Ss did not clearly prefer food stimuli until after their 1st wk. A 2nd set of nondeprived Ss were given choice preference trials between other chicks on 1 side of the T and nothing on the other side. They too preferred social stimuli at all ages, without even a clearly reliable decline in choice response speed. It is concluded that chicks raised with other chicks evidence no decline of interest in social stimuli through their 1st 10 days of life. In turn, diminished interest in social stimuli could not account for the upper limit on the critical period for imprinting.—*Journal abstract.*

9574. Hsiao, Sigmund & Pertulakes, William. (U. Arizona) **Feeding-drinking interaction: Food rationing and intake of liquids varying in taste, caloric and osmotic properties.** *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1495-1497.—Gave 30 rats either 0, 3, 6, 9 gm., or unlimited amounts of food accompanied by either water, .45% NaCl, .9% NaCl, .4% saccharin, .46% sucrose, or 9.3% sucrose solutions for 24 hr.; liquid or food intake for this period was recorded. Results indicate that (a) as food ration is decreased rats drink less water or saline solution but more sucrose or saccharin solutions, and (b) with ad lib food, food intake is reduced when accompanied by the liquids with calories but food intake is constant with liquids having no calories regardless of the osmotic or taste differences. (23 ref.)—*Journal abstract.*

LEARNING

Conditioning

9575. Antal, Juraj & Gantt, W. Horsley. (Comenius U., Medical School, Bratislava, Czechoslovakia) **Blood flow, blood pressure and heart rate changes accompanying hind leg flexion in conditional and unconditional reflexes.** *Conditional Reflex*, 1970(Oct), Vol. 5(4), 197-206.—Formed a flexor CR of the hind leg in 7 mongrel dogs. The UCS was an electrical shock on the skin of the paw, and the CS was a whistle. After stabilization of the CR, the following were recorded: flexor movement to UCS and to CS of the hind leg, blood flow in the femoral artery on the same leg, blood pressure in the carotid artery, heart rate, and respiration. During UCR, CR, and acute extinction of the CR, the changes of the above-mentioned parameters were investigated. The sequence of extinction of the individual measured parameters was as follows: flexion, blood pressure, blood flow, heart rate, and respiration. In the

mechanism of the vegetative changes accompanying the conditional hind leg flexion, 3 main components were involved: (a) muscular-visceral reflexes originating from different receptors of the contracting muscles, (b) emotional changes, and (c) the conditional component as a separate CR for each measured parameter. Principles underlying the formation of CRs are discussed under the headings of schizokinesis, peripheral and central stimulations. (15 ref.)—*Journal abstract.*

9576. Dumas, Carol O. (U. Southern Mississippi) **The effect of systematic desensitization and implosive therapies for introverts and extraverts: An experimental analogue.** *Southern Quarterly*, 1970(Jan), Vol. 8(2), 211-220.—Investigated 2 types of behavior therapy, implosive therapy (IT) and systematic desensitization (SD), in relation to their effectiveness for Ss defined in terms of Eysenck's personality categories (introversion—I—and extroversion—E). 63 male albino rats were defined as I and E on the basis of a preliminary conditioning task. 40 Ss falling at the extremes of the conditioning continuum were then subjected to an approach-avoidance conflict situation to induce experimental neurosis. Reversal of neurosis consisted of reestablishing eating behavior by approximations of IT and SD. Results suggest that for E, IT provided a more efficient reversal technique. For I the method appeared to be of little consequence.—*Journal summary.*

9580. Will, Bruno. (U. Strasbourg, Lab. of Psychophysiology, France) **Expérience préalable et stratégie dans le conditionnement opérant.** [Prior experience and strategies in operant conditioning.] *Physiology & Behavior*, 1970(Dec), Vol. 5(12), 1411-1415.—8 groups of 4 albino rats obtained a similar number of precision food pellets after 12 conditioning sessions; but, according to age or strain, they achieved this result by different strategies. These strategies, studied by means of close analysis of the response, did not depend on previous reinforcement: a previous treatment of 6 sessions had only had a short-term effect and cannot account for the effective difference observed at the 12th session.—*English summary.*

Discrimination

9581. Jackson, William J. & Pegram, G. Vernon. (U. South Florida) **Acquisition, transfer, and retention of matching by rhesus monkeys.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 839-846.—Acquisition of non-corrective simultaneous matching by 11 rhesus monkeys varied a good deal, especially in the number of trials spent on position preference. When Ss were required to transfer from color to form matching, there was a decrement in performance with only 2 of 10 Ss performing above chance during the 1st day of transfer, although most of the remaining Ss performed above chance during the 2nd day. The acquisition curves for

form were more gradual than for color and the Ss did not revert to a position preference during transfer. After 14 days of form matching the Ss were retested on color matching and showed very high savings.—*Journal abstract.*

Reinforcement

9586. Carder, Brooks & Berkowitz, Kenneth. (U. California, Los Angeles) **Rats' preference for earned in comparison with free food.** *Science*, 1970(Feb), Vol. 167(3922), 1273-1274.—Trained 6 male albino rats to eat free food from a dish, and to press a lever for similar food. The free food was then presented while Ss were pressing on several reinforcement schedules. Ss continued to press for reinforcement when 1 or 2 presses were required for reinforcement, and ate little free food. When 10 presses were required for reinforcement, Ss preferred free food and pressed little or not at all. It is concluded that, when work demands are not too high, rats prefer earned food to free food.—*Journal abstract.*

9587. Ciminero, Anthony R. (Ohio U.) **Electric shock as a positive conditioned reinforcer.** *Journal of the Scientific Laboratories, Denison U.*, 1969(Jun), Vol. 50(1-4), 9-12.—Ran 12 male hooded rats through a series of 24 alternated training and extinction sessions. On 12 training days the experimental group had shock and water paired, contingent upon lever pressing. A 2nd group had tone instead of shock paired with water. The 3rd group responded for 40 water reinforcements and received 40 noncontingent shocks in the experimental chamber after bar press training was completed. During extinction 3 different response contingent stimulus conditions were available: (a) shock-dipper click, (b) tone-dipper click, or (c) dipper click. Results demonstrate that Ss receiving shock-water pairings in training responded more often during extinction when shock was presented than during other extinction sessions. For other Ss, shock presentations during extinction suppressed bar pressing. Results suggest that shock can

function as a positive conditioned reinforcer and that habituation is insufficient to account for this.—*Journal abstract.*

Reinforcement Schedule

Punishment & Extinction

9589. Campbell, Patrick E., Crumbaugh, Charles M., Snodgrass, M. Emily, & Knouse, Stephen B. (Southern Methodist U.) **Resistance to extinction as a function of the number of small and large rewarded runway trials.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 925-926.—Trained 4 groups of 10 rats each in a runway for 0, 5, 10, or 15 small rewarded (2 pellets) trials prior to being shifted to large reward (24 pellets) for the remainder of 45 trials. Acquisition performance was slower for small than for large reward during the early trials, but the groups were not different by the end of acquisition. Resistance to extinction was an increasing linear function of the number of small rewarded trials.—*Journal abstract.*

9590. Dunlap, William P. & Dachowski, Lawrence. (Tulane U.) **Effects of drive and partial reinforcement on extinction both between and within daily sessions.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 875-885.—40 albino rats were assigned randomly to the cells of a 2 x 2 factorial design consisting of % reinforcement (50 and 100%) by deprivation (high and low). Speed measures were obtained from 2 segments of a straight-alley runway for 80 acquisition and 56 extinction trials with 4 trials given/day. Deprivation effects were found over the closely spaced trials within daily sessions for both acquisition and extinction. In extinction the interaction of drive and % reinforcement within daily sessions supports a frustration-theory explanation of extinction behavior. The lack of deprivation-produced differences in the size of the PRE over days is also consistent with this explanation. (19 ref.)—*Journal abstract.*

9591. Kimbrell, G. M. (Denison U.) **Effects of social stimuli during extinction on bar pressing and food directed behavior in albino rats.** *Journal of the Scientific Laboratories, Denison U.*, 1969(Jun), Vol. 50(1-4), 1-4.—Housed 29 male Charles River CD strain rats either singly or in groups of 4. Ss were bar press trained and extinguished in 1 of 3 conditions: Social A, with another S who had access to food cup; Social B, with another S who did not have access to food cup; and Control with no other S. During extinction none of the test Ss had access to the food cup due to an interposed barrier. Bar presses and barrier contacts were recorded. It was found that presence of another S during extinction resulted in greater frequency of barrier contacts but not of bar presses. Results are interpreted consistent with other social facilitation phenomena.—*Journal abstract.*

SOCIAL & SEXUAL BEHAVIOR

9592. Scudder, C. L., Richardson, D., & Karczmar, A. G. (Loyola U., Medical School, Hines, Ill.) **Aggression and the orienting reflex in several genera and strains of mice.** *Aggressologie*, 1969, Vol. 10(2), 135-

144.—Studied 4 genera and 3 strains of mice involved in a social situation. A quantitative measurement of noncompetitive aggression as well as an evaluation of other activities, e.g., exploration and stereotypic behavior was carried out. Results show that the mouse types in question could be arranged in the following order of increasing aggressiveness: *peromyscus* < *microtus* < *onychomys* < *mus musculus* CF-1 < *mus musculus* C 57 B1/6J < *mus musculus* "mo." (wild type). Results are discussed in terms of various interdependent factors which control aggression, particularly the exploratory behavior and the brain levels of catecholamines and serotonin. (German, French, & Spanish summaries) (30 ref.).—*Journal abstract*.

SENSORY PROCESSES

9593. Bragg, Vernon C. & Dreher, Daniel E. (U.S. Air Force School of Aerospace Medicine, Brooks Air Force Base, Tex.) **A shock-avoidance technique for determining audiologic thresholds in the cebus monkey.** *Journal of Auditory Research*, 1969(Jul), Vol. 9(3), 270-277.—Behavioral audiometric thresholds were determined from .5-4 kcps in 14 white-throated *Cebus capucinus* monkeys using a shock-avoidance method; the nature of the data indicated that shock avoidance is an effective technique for use with this species. Stable and consistent thresholds within Ss were found but a wide range existed between animals. A hearing loss brought about by infection after middle ear surgery on 1 of the monkeys was detected on a shock-avoidance audiogram. Stable prepathology thresholds had been previously established, and the course of infection and recovery after treatment was clearly reflected by the audiogram, thus bearing on the validity of the method.—*Journal summary*.

9594. Stern, Ferdinand & Holmes, Nan K. (Eastern Michigan U.) **Reactions of two strains of young chicks to depth.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 803-806.—Utilized an auditory stimulus, cheeping, in an attempt to establish a preference in 40 DeKalb No. 131 and 40 Ghostley chicks for the deep side of a visual cliff. Approximately 80% of all responses were made to the shallow side. The cheeping, however, did have a differential effect on the number of deep responses by the 2 strains; in 1 strain a significantly greater number of deep responses was made when the deep side of the cliff faced in the direction of the noise, while in the other strain this difference was not observed. Some theoretical aspects of depth perception are discussed.—*Journal abstract*.

DEVELOPMENTAL PSYCHOLOGY

9595. Aebli, Hans. (U. Konstanz, Div. of Psychology, W. Germany) **Kognitive Entwicklung als Aufbau in einem sozio-kulturellen Kontext.** [Cognitive development as a construction in a socio-cultural context.] *Schweizerische Zeitschrift für Psychologie und ihre Anwendungen*, 1970, Vol. 29(3), 389-403.—Views the formation of cognitive structures in human development as a construction process establishing relationships between elements and generating hierarchical schemata. The most important construction processes do not occur spontaneously, but rather come about under guidance, i.e., in a sociocultural context. A new interpretation of

the processes in Geneva-type experiments and a new model of development are derived from this conception. (French summary) (18 ref.).—*English summary*.

9597. Blakely, Karen B. & Somerville, Addison W. (Sacramento State Coll.) **An investigation of the preference for racial identification terms among Negro and Caucasian children.** *Journal of Negro Education*, 1970(Fal), Vol. 39(4), 314-319.—400 children, Grades 1-12, participated in this study in May, 1968. All schools involved serve a mixed low-middle and middle-class socioeconomic area in California. Ss above Grade 3 completed a questionnaire in their classroom setting by indicating their preference among the racial names "Negro," "black," "colored," and "Afro-American," and between "white" and "Caucasian." Preferences of Ss in Grades 1-3 were obtained on an individual basis. All Ss indicated a desire to avoid using terms pertaining to color when designating the Negro race; less than 1/4 of the total sample selecting either "colored" or "black." This tendency toward the Caucasian race is not as apparent. Data also show that children learn the correct racial designation for the Negro race prior to learning the proper anthropological designation for the Caucasian race.—S. R. Diamond.

9598. Borich, Gary D. (Indiana U., Inst. for Child Study) **Preferences for color, form, borders, lines, and dots by preschool children and adults.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 811-817.—2 groups of 25 preschool children and 25 graduate students strongly preferred form over color and borders. In the presence of form, children preferred color over borders, while adults preferred the reverse. Some variations of form were significantly more preferred than others, but the order of these variations was constant across groups. Adults preferred borders and form similarly, but children preferred form significantly more often than borders. Adults preferred lines and dots similarly, but children preferred lines significantly more often than dots. Results illustrate the use of R. D. Luce's choice axiom in predicting form preference in the context of a larger number of dimensions.—*Journal abstract*.

9599. Edwards, Diane & Edwards, Joseph S. (U. Missouri, Kansas City) **Fetal movement: Development and time course.** *Science*, 1970(Jul), Vol. 169(3940), 95-97.—In an experiment with 8 pregnant women, designed to determine the time course of changes in fetal movement, it was found that prenatal behavior develops in 3 phases: early rates, acceleration and maintenance, and deceleration to birth. Fetal activity occurs as discrete movements, bursts of activity, and prolonged activity. 4-hr samples were most representative of the daily rates of movement.—*Journal abstract*.

9600. Elkind, David. (U. Rochester) **Exploitation and the Generational Conflict.** *Mental Hygiene*, 1970(Oct), Vol. 54(4), 490-497.—Proffers an explanation of generational conflict as a developmental phenomenon in the process of self-differentiation. As the "implicit contract" between adult and child is fulfilled or violated at successive developmental levels, the adolescent tends to adopt a value system and becomes self-disciplined, or rebellious and delinquent.—A. M. Cawley.

9601. Freedle, Roy. (Educational Testing Service, Princeton, N.J.) **A stimulus similarity scale for temporal measures of attention in infants and**

children. *Developmental Psychology*, 1971(Mar), Vol. 4(2), 240-247.—Extends a theory which predicted viewing times for stimuli in a subset of alternatives chosen from a larger set by constructing a stimulus similarity scale which allows disclosure of the psychological space (the dimensionality and relative distances for a given set of stimuli) implied by the matrix of similarity values. Hypotheses regarding changes in perceived dimensionality over different age groups are able to be formed, and enable the study of developmental trends using the similarity scale. This scale is shown to have a close connection with Y. N. Sokolov's theory of an orienting response. Empirical data are presented illustrating the theory.—*Journal abstract*.

9602. Groth, Hilde; Weled, Barry, & Batkin, Stanley. (U. Hawaii, Honolulu) A comparison of monocular visually evoked potentials in human neonates and adults. *Electroencephalography & Clinical Neurophysiology*, 1970(May), Vol. 28(5), 478-487.—Obtained summated visually evoked responses (VERs) to monocular and binocular light flash stimulation simultaneously from each cerebral hemisphere in 22 newborn infants and 10 young adults. Amplitude analyses and interhemispheric statistical comparisons show a significantly greater amplitude of the contralateral VER in infants in response to monocular stimulation. This difference did not reach significance in adults although the trend was maintained. Left-right hemispheric comparisons of amplitude did not reach significance for any group. Interhemispheric correlation coefficients were computed and were found to be considerably greater for the adult group. Results are discussed in terms of their relationship to fiber counts in the ipsilateral and contralateral tracts, the respective fiber diameters and functional changes related to progressive myelination of the developing visual system. Several indices for assessing the degrees of functional maturity of the developing human visual system are considered. (French summary) (26 ref.)—*Journal summary*.

9603. Jacobi, Yolande. La contribution de Jung a la psychologie de l'enfant. [Jung's contribution to child psychology.] *Bulletin de Psychologie*, 1969-1970, Vol. 23(17 19), 1040-1044.—Jungian analytic psychology is ordinarily considered to be concerned with adults and the elderly rather than with children. However, particularly in his later writing, Jung devoted considerable attention to the formative influences of the collective unconscious, archetypes, and typology on the child's personality.—R. E. Smith.

9604. Madsen, Clifford K., Edmonson, Frank A., & Madsen, Charles H. (Florida State U.) Modulated frequency discrimination in relationship to age and musical training. *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1468-1472.—Tested auditory discrimination of a modulated frequency in 200 2nd, 5th, 8th, and 11th graders, college nonmusic and music majors, graduate music students, and music faculty. Stimulus frequency was F# (369.99 Hz), which was presented to Ss individually in 15 randomized 30-sec trials in 3 categories: without frequency alteration, ascendingly, and descendingly. Modulation for the ascending and descending tones was 2c/sec during the last 25 sec. of the stimulus tone. Results indicate that: (a) auditory discrimination is partially a function of age as well as of music training; (b) younger Ss respond to tonal stimuli "incorrectly and sharp" while older Ss evidence better discrimination

while demonstrating a proclivity toward flatness; (c) perception of the modulated frequency is best during the 1st 5 sec. (10c) of frequency change; and (d) auditory tests that assess discrimination should control for guessing as well as for directional, i.e., up-down, propensities. (27 ref.)—*Journal abstract*.

9605. Megargee, Edwin L., Parker, George V., & Levine, Robert V. (Florida State U.) Relationship of familial and social factors to socialization in middle-class college students. *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 76-89.—Reviews sampling problems encountered in the studies of factors associated with poor socialization using adjudicated delinquents and nondelinquents. To determine the familial and social factors associated with differences in socialization in a nondelinquent population, the CPI Socialization (So) scale and a personal history questionnaire were administered to 208 female and 280 male college students. Ss scoring low on the So scale revealed the same basic pattern of associations usually encountered in studies of delinquents, indicating that the previous studies were not simple artifacts of the judicial process. Differences between high and low So scale scorers and male and female delinquents are discussed. (26 ref.)—S. Knapp.

9608. Stein, Aletha H. (Pennsylvania State U., Coll. of Human Development) The effects of sex-role standards for achievement and sex-role preference on three determinants of achievement motivation. *Developmental Psychology*, 1971(Mar), Vol. 4(2), 219-231.—Hypothesizes that children's sex-role standards for 6 achievement areas (mechanical, athletic, math, reading, artistic, and social skills) are related to their attainment values, expectancies, and standards of performance in these areas. Ss were 235 6th and 9th graders divided into 2 socioeconomic status (SES) groups. The major hypothesis is supported. Further, as predicted, 9th graders' attainment values were more influenced by sex typing than 6th graders', and expectancies and standards of lower SES Ss were more influenced by sex typing than those of higher SES Ss. There were no age or SES differences in sex-role standards, but individual differences in sex-role standards were correlated with motivation scores. Sex-role preferences were not related to the pattern of motivation scores. (16 ref.)—*Journal abstract*.

INFANCY

9609. Bench, John & Parker, Anne. (Royal Berkshire Hosp., Audiology Research Unit, Reading, England) On the reliability of the Graham/Rosenblith Behavior Test for neonates. *Journal of Child Psychology & Psychiatry & Allied Disciplines*, 1970(Nov), Vol. 11(2),

121-131.—The Graham Test as modified by J. F. Rosenblith and further modified by the present authors was slightly, but not significantly, more reliable (inter-O reliability) than the original tests, although an attempt was made to achieve more rigorous control over presentation of test items to 19 infants. However, the reliability obtained was still of a high order. 4-hr test-retest reliability was also found to be slightly higher than 24-hr test-retest reliability for most items as expected, although again the difference was not significant. Evidence on the effect of pretest arousal on test scores confirms Rosenblith's suggestion that the arousal variable needs to be carefully controlled. In general, a state of light sleep or wakefulness seems required.—*Journal summary.*

Data are submitted on changes in the daily distribution of wakeful periods during the 1st yr. of the child's life.—*I. D. London.*

9614. Lovric, V. A. (Royal Alexandra Hosp. for Children, Camperdown, New South Wales, Australia) **Normal haematological values in children aged 6 to 36 months and socio-medical implications.** *Medical Journal of Australia*, 1970(Aug), Vol. 2(8), 366-370.—Presents normal hematological values from a survey of healthy children aged 6-36 mo. and regularly attending various metropolitan baby health centers in Sydney. Anemia, defined as a hemoglobin level of 10 gm/100 ml or below, in association with a microcytic, hypochromic blood film, was found in only 3% of children. In hospital practice, 20% of children have this disease. Circumstantial evidence linking anemia and childhood morbidity is presented.—*Journal abstract.*

9615. Turnure, Cynthia. (U. Minnesota, Inst. of Child Development) **Response to voice of mother and stranger by babies in the first year.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 182-190.—6 boys and 5 girls at each of 3 ages (3 mo., 6 mo., and 9 mo. were presented with 3 tape-recorded auditory stimuli: mother's normal voice, mother's voice slightly distorted, and mother's voice grossly distorted. 1/2 of the Ss at each age also heard the voice of an unfamiliar woman. There was greater motor quieting with age to all versions of the mother's voice and to the stranger's voice, suggesting increased attention to these verbal stimuli with age. The 6-mo-old Ss cried more than the 3-mo-old Ss during all versions of the mother's voice, especially her normal voice. There was also more mouthing during the

mother's vs. the stranger's voice at 3 mo. (20 ref.)—*Journal abstract.*

9616. Weizmann, Frederic; Cohen, Leslie B., & Pratt, R. Jeanene. (Purdue U.) **Novelty, familiarity, and the development of infant attention.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 149-154.—Examines changes in infants' attention to novel or familiar stimuli in novel and familiar environments as a function of age. 16 male and 16 female 4-wk-old infants were exposed for 30 min. daily to 1 of 2 stables in 1 of 2 bassinets. Fixation times at 6 wk. indicate more attention to the familiar than the novel stable. By 8 wk., fixation time to the novel increased and overall differences in attending to the 2 types of stables disappeared. However, a significant Sex \times Environmental Novelty \times Stable Novelty interaction indicates that at 8 wk., males fixated a novel stable more if in a familiar environment, while females fixated the novel stable more if in a novel environment.—*Journal abstract.*

CHILDHOOD

9619. Girard, Giorgio. **Décision révoquée et fruitée du conflit.** [Revocable decision and evasion of conflict.] *Bulletin du Centre d'Etudes et Recherches Psychotechniques*, 1968(Oct), Vol. 17(4), 245-251.—Evaluates comparisons between revocable and irrevocable decisions and their aftermaths. The level of conflicts are analyzed and an experiment which was conducted on 135 9-13 yr. old females involving sets of color cards is described. It is concluded that the tendency to evade a conflict after a revocable decision is far less than after an irrevocable 1. (English summary) (18 ref.)—*I. Sirotnin.*

9620. Hindelang, Michael J. (State U. New York, Albany) **Educational and occupational aspirations among working class Negro, Mexican-American and white elementary school children.** *Journal of Negro Education*, 1970(Fal), Vol. 39(4), 351-353.—Used a pretested interview schedule in interviewing 187 Grades 4, 5, and 6 working-class pupils from a West Coast community of 95,000. The racial breakdown of the sample was 68 Negroes (N), 74 Mexican Americans (MA), and 45 whites (W), and the racial composition of the interviewer was fixed in the same proportion. Ss were asked how much longer they would like to go to school, how far in school they thought their parents and teachers wanted them to go, and what they wanted to do when they grew up. The N subsample had the highest education aspirations, followed by the W, and finally the MA subsamples. When educational aspiration is held constant, W and MA pupils are found to aspire to higher educational categories. It is suggested that Negro students may be preparing themselves for job discrimination in the future.—*S. R. Diamond.*

9621. Koslin, Sandra C., Amarel, Marianne, & Ames, Nancy. (Riverside Research Inst., New York, N.Y.) **The effect of race on peer evaluation and preference in primary grade children: An exploratory study.** *Journal of Negro Education*, 1970(Fal), Vol. 39(4), 346-350.

—Explored the use of children's preferences for sketches of classrooms which differ in racial composition as a measure of school related racial attitudes in the primary grades. 120 Grade 1 and 2 children from 3 elementary schools in a middle-sized Eastern city served as Ss. 1 school was all white, 1 all Negro, and the third $\frac{1}{2}$ white and $\frac{1}{2}$ Negro. Pairs of sketches depicting classroom scenes, differing only in racial composition, were used. In individual interviews Ss were shown the pictures 1 pair at a time. No questions indicating preference were asked. The white Ss showed an overwhelming preference for the white classrooms. The Negro Ss were divided in their preferences.—*S. R. Diamond.*

9623. Lefebvre, Andre & Bohn, Martin J. (Loyola U., Chicago) **Occupational prestige as seen by disadvantaged black children.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 173-177.—Studies developmental and differential aspects of occupational prestige among 300 disadvantaged Negro children in Grades 4-8. Ss ranked 12 occupations representative of high and low socioeconomic levels. There was high agreement in the rankings among grades ($p \leq .81$), and between boys and girls ($p \leq .81$). In comparison with the general population, the Ss' rankings also showed high similarity at all grade levels ($p \leq .75$). By the 4th grade, disadvantaged Ss of both sexes show a high level of awareness of adult, standard concepts of occupational prestige.—*Journal abstract.*

9625. Lurcat, L. **Evolution de l'activité graphique entre 5 et 6 ans: Multiplication et diversification des réalisations.** [The evolution of graphic activity between 5 and 6 years: Multiplication and diversification of realizations.] *Journal de Psychologie Normale et Pathologique*, 1970(Jul), No. 3, 325-341.—Different characteristics of design and writing between 5-6 yr. of age were identified during the continuous observation of the graphical production of a child. This period has been characterized as being the age of the model: models of design and writing which are scholarly acquisitions become integrated with spontaneous productions. At the same time nonfigurative forms disappear, and figurations become progressively the exclusive theme of drawings. The mastery of directions of space manifests itself particularly in the appearance of attitudes in the drawing of a person. During this period one can observe the progressive canalization of graphism controlled in the scholarly exercises of writing and drawing. Recreational graphism expressed in figurations or in kinesthetic play remains very apparent.—*L. A. Ostlund.*

9626. Mann, Leon. (Harvard U.) **Effects of a commitment warning on children's decision behavior.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 74-80.—Conducted 3 studies with 104 preschool children in the United States and Australia to determine whether a commitment warning (admonition that a decision will be binding) would influence behavior on immediate and on unrelated decisions. In comparison

with Ss in the noncommitment condition, commitment Ss took longer to announce their choice of a gift toy and showed greater willingness to make some sort of decision on an unrelated problem. Contrary to expectation, the commitment warning did not produce an increase in postdecisional bolstering. 5 yr. olds tended to show more mature decisioning than 4 yr. olds. Negro and white United States children were very similar to Australian children in their responses. Findings suggest that even in young children, issuing a commitment warning initiates a psychological set to approach decision problems carefully and decisively.—*Journal abstract.*

9633. Cole, Michael; Frankel, Frederick, & Sharp, Donald. (Rockefeller U.) **Development of free recall learning in children.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 109-123.—In 3 experiments, performance of children in grades ranging from 1-9 ($N=120$, 40, and 80) was investigated in a repeated trials, free recall experiment. Variables found to improve recall were presenting objects or pictures, rather than saying words, written instead of verbal recall, grouping of stimuli according to semantic category at the time of learning, and lists composed of items from a set of identifiable categories rather than randomly chosen words. The relation between accuracy of recall and various organizational aspects of Ss' recall was investigated using measures of (a) category clustering, (b) components of clustering scores, (c) serial position effects, and (d) seriation of response orders. In general, manipulations which increased amount recalled did so by increasing accuracy in the middle or early portions of the recall list. For instance, age differences did not occur in late serial positions, but were restricted to the early and middle portions of the list. Category clustering

ordinarily increased with increased accuracy; when category clustering was of sufficient magnitude, it reduced serial position effects. Analysis of the S's tendency to output the lists in serial order indicate a large difference between the 1st and subsequent learning trials; serial outputting was characteristic of Trial 1 only. Although performance on the accuracy and clustering measures increased with grade, interactions between grade and other independent variables were generally lacking. (36 ref.)—*Journal abstract.*

9634. Eisler, Hannes & Spolander, Krister. (U. Stockholm, Psychological Lab., Sweden) **On the sign of slope in the learning of linear functions.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 176-184.—Presented 21 6th graders in 3 equal groups with pairs of values (E and S) of 3 different linear functions $E = a + bS$. In a test phase Ss indicated the E values that corresponded to the S values. Values were represented as distances marked on straight lines. 2 groups, 1 a control group, had a positive slope, and the 3rd group a negative. The squared sum of the S-E differences was kept constant. All groups had roughly the same performance as measured by the squared sum of deviations from empirical and correct E values. The learning curves, however, indicate that some learning had taken place in the group with the negative slope. It is concluded that a principle rather than a function was learned.—*Journal abstract.*

9636. Friedrichs, Ann G., et al. (U. North Carolina, Chapel Hill) **Interrelations among learning and performance tasks at the preschool level.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 64-172.—Administered 8 learning and 8 performance tasks to 50 4- and 5-yr-old preschoolchildren. The median correlation among the learning tasks was .17, indicating a high degree of differentiation of learning abilities in preschoolchildren. There were significant relations among simple learning tasks and tasks dependent upon more complex cognitive processes (i.e., paired-associate learning with observational learning, problem solving, and category sorting; observational learning with problem solving and category sorting). The 2 performance tasks yielding the greatest number of significant positive relations with the learning tasks were attention and following instructions. Scores on the attention task were significantly related to performance on oddity learning, observational learning, problem solving, and category sorting. The significant correlations for following instructions were those with paired-associate learning, serial memory, observational learning, incidental learning, and problem solving. Level of aspiration was negatively related to performance on serial memory, observational learning, and incidental learning. In general, there were few sex differences in level of performance or incidence of significant correlations.—*Journal abstract.*

9637. Gallagher, Joseph W. & Reid, Donald R. (U. Alabama) **Paired-associate learning of children with mixed list designs.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 300.—Tested 37 male and 38 female 1st graders and 35 male and 40 female 3rd graders with 2 types of weak normatively associated

pairs (List 1) and nonassociated pairs (List 2). It was found that 1st graders made significantly fewer errors ($p < .02$) on the 0% pairs in List 1, while only small differences were found among 3rd graders. Results suggest that 1st and 3rd graders "may employ different processes or strategies in learning mixed lists."—P. Hertzberg.

9638. Kobasigawa, Akira. (U. Windsor, Ontario, Canada) **Effects of model's problem-solving behavior and vicarious reinforcement on children's learning.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 700.—Investigated whether (a) observation of an expert model (M) is more effective than the trial-and-error method of learning, and (b) observation of M may lead to a more generalized problem-solving strategy. 48 2nd graders observed a rewarded and unrewarded M, heard an M being rewarded, or were not exposed to any M. Ss were then tested with a different but similar concept-identification task. Ss who observed the model had significantly fewer errors than those who did not observe a model or only heard the reward. Results support both a and b.—S. Knapp.

9639. McCarron, Carole & Daves, Walter F. (Georgia State U.) **Free recall of object names in preschoolchildren as a function of intracategory variation.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 295.—Tested 2 groups (10 Ss each) of 5- and 6-yr-old middle-class preschoolchildren (mean ages of 58 and 63 mo.). Ss were shown and asked to recall 48 common objects, comprising 12 categories. Data was subjected to analysis of variance with variety level as a within-Ss variable, and age as the between-Ss variable. The variety effect was found to diminish with age, and recall appeared to be better for older Ss. However, a negative correlation between variety effect and age suggested a need for further investigation.—P. Hertzberg.

9640. Norton, J. C., Versteeg, Arlen D., & Rogers, Cecil A. (U. Arizona) **Discrimination learning, social class, and type of reward.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 803-805.—Used a visual discrimination task to determine the effectiveness of verbal reward alone vs. a combination of candy and verbal reward with 16 middle-class 5-yr-old children and 16 5-yr-old children from a Head Start class. Social class proved to be the only significant variable, the performance of the higher status group being superior to that of the lower status group. Only a tendency for the verbally rewarded Ss to be superior to combined reward Ss was noted.—*Journal abstract.*

9641. Peterson, Rita W. (U. California, Berkeley) **Identification and analysis of some aspects of exploratory behavior (curiosity) in elementary school children.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1516-1517.

9642. Repucci, N. Dickon. (Yale U.) **Parental education, sex differences, and performance on cognitive tasks among two-year-old children.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 248-253.—The relation between sex of child, parental educational level, and performance on 3 different types of cognitive tasks—2 vocabulary tasks, an embedded figures task, and a 2-choice discrimination task—was investigated among 48 2-yr-old children. It was expected that parental education would be positively related to superior performance on all of the tasks for girls but unrelated for boys. Results confirmed this expectation.—*Journal abstract.*

9643. Schiopu, Ursula. (U. Bucharest, Romania) **Thinking strategy in positional games by young children.** *Revue Roumaine des Sciences Sociales-Série de Psychologie*, 1970, Vol. 14(1), 3-15.—Studied the approach to the thinking strategy among young children in positional games. It is noted that even the weakest player can observe a certain strategical approach. A difference in approach is observed between various players with the conclusion that total information is more evident in children from the higher school grades. Saturated by psychological factors, the game shows passive, defensive, active and simple, and complex attitudes. The strategies applied to the game are described as engaging, combinatory, and amelioration strategies.—*I. Sirodin*.

9644. Voronin, L. G., Konovalov, V. F., Gromyko, N. M., & Serikov, I. S. (Inst. of Biophysics, Pushchino-Oka, USSR) **Elektrofiziologicheskie dannye o vzaimodeistvii osoznannykh i neosoznannykh sledovykh protsessov u chelovek v ontogeneze.** [Electrophysiological data on the interaction of cognized and uncognized trace processes in human ontogenesis.] *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1970(Mar), Vol. 20(2), 431-440.—41 4-16 yr. old children were Ss in an ontogenetic study of the dynamics of formation of various trace CRs as reflected in their interactions at the levels of the 1st and 2nd signal systems. In the 1st series of experiments S opened his eyes and pressed a button only when a light was turned on; in the 2nd series he did this only when the light was due to be turned on; in the 3rd, he did so just before the light was to be turned on. Formation of trace CRs was achieved in all Ss. Even in the 1st experimental session EEG reactions, GSRs, oculomotor and motor reactions arose before the light was turned on. By the 2nd-3rd session these reactions were stabilized and appeared 80-90% of the time. In the 2nd series, involving "conscious evaluation of the trace interval," in most cases an underestimation of the time the light was to be turned on was observed. In the 3rd series, underestimation occurred only in 4-8 yr. old Ss. 14-16 yr. old Ss were accurate, since they employed counting. In 4-8 yr. old children, it is concluded, the trace processes are formed chiefly at the level of the 1st signal system, but in 14-16 yr. old children at the level of both signal systems. (English summary)—*I. D. London*.

Concepts & Language

9646. Bajard, Guy. (U. Bordeaux, Lab. of Genetic & Comparative Psychology, France) **Essai de quantification des conduites dans la découverte de lois de séries.** [An experiment in the quantification of responses in the discovery of laws of series.] *International Review of Applied Psychology*, 1970(Oct), Vol. 19(2), 141-148.—Using the Apparatus for the Resolution of Simple Problems (ARPS) primary schoolchildren were required to discover rules of series without the knowledge of the first term. Each S's response was recorded by means of polygraph recording equipment, giving an objective record of the methods of approach used in the attempts to discover the rule of the series. This made possible a quantification of the results and an assessment of the differences between scholastic levels, and between the different experimental conditions obtaining during the task. 1 of the most important discoveries was the

crucial role played by intellectual attitudes induced by the assigned rules of procedure, and the material given to finish the task. These seemed to be generally independent of the scholastic level.—*L. A. Ostlund*.

9647. Bellugi, Ursula. (Salk Inst. for Biological Studies, San Diego, Calif.) **Learning the language.** *Psychology Today*, 1970(Dec), Vol. 4(7), 32-35, 66.—Intensive observations of the language development of 3 children during their 3rd, 4th, and 5th yr. revealed several common patterns. At first, children did not use auxiliary verbs; however, when they began to use these verbs, they seldom contracted them as their parents nearly always did. The irregular verbs and nouns were often used correctly until the general rules were discovered. Then, for a time, the rules were overgeneralized to the irregular words. It is concluded that children are active in analyzing language and developing rules of maximum usefulness. Some cross-cultural evidence suggests that such tendencies are general and may be biological.—*E. J. Posavac*.

9648. Bentler, P. M. (U. California, Los Angeles) **Evidence regarding stages in the development of conservation.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 855-859.—Analyzed standardization data collected from 4-8 yr. old children for the Goldschmid-Bentler Conservation scales for evidence of continuity or discontinuity in growth of conservation skills. At younger and older age groupings the resulting total score distributions were strongly unimodal, indicative of nonconservation and conservation, respectively. In age groupings containing extremes of nonconservers as well as conservers, S's scores were not obviously trimodal as a 3-stage hypothesis would predict. Score distributions appeared continuous but were not normal in nature.—*Journal abstract*.

9657. Higgs, Jo A. (U. Edinburgh, England) **The phonetic development of word initial /s/ plus stop clusters in a group of young children.** *British Journal of Disorders of Communication*, 1968(Oct), Vol. 3(2), 130-138.—Elicited the words spoon, stamps, and scarf from 133 2-5 yr. old children for the purpose of phonetically analyzing and describing the sounds which occur at the /sp-/, /st-/, and /sk-/ places in structure. The resulting utterances are classified by age and certain phonetic characteristics: place of articulation, manner of articulation, state of glottis, length, and the sequencing of segments. The distributional changes which occur from the young age groups to the older age groups verify the notion that the phonetic acquisition of these initial clusters and perhaps of speech generally is best viewed as a step-by-step development.—*Journal summary*.
9658. Jensen, Jørgen A. (Danish Inst. of Educational Research, Copenhagen, Denmark) **Concrete transitivity of length: A method of assessment.** *Scandinavian Journal of Psychology*, 1970, Vol. 11(3), 196-212.—Explored the problem of assessing concrete transitivity of length in 20 52-80 mo. old children, using an essentially nonverbal design employing 9 sets of 3 sticks each. In the training phase, Ss learned that a bead was hidden in the longest stick and information was given by the E as to correct and incorrect choices. In the test phase of 8 trials, Sticks A, B, and C were presented in a systematic variation. S displayed transitivity when more than 5 times in the 8 trials he chose the largest of the 3 sticks, A, on the basis of the information $A > B$ and $B > C$. 50% of Ss showed transitivity. The youngest S with 6 correct responses was 5½ yr. old; the youngest S with 8 correct responses was 6¼ yr. old. Extensions of the design are discussed.—*Journal abstract*.

9663. Odom, Richard D. & Mumbauer, Corinne C. (Vanderbilt U.) **Dimensional salience and identification of the relevant dimension in problem solving: A developmental study.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 135-140.—A color-form salience task was presented to 277 Ss, 6-19 yr. of age. Ss were free to choose a comparison stimulus that was like a standard stimulus in form or to choose a 2nd comparison that matched the standard in color. No feedback was given by the E regarding the Ss' choices. A concept-identification problem with either form or color relevant was then presented to a selected sample of Ss for whom form was assessed to be more salient. Analyses of errors indicate that the performance of the 2 youngest groups who had a color-relevant problem did not differ, but that both of these groups made more errors than any other group. No differences in performance among the other groups were found. (18 ref.)—*Journal abstract*.

9672. Tapp, June L. (U. Chicago) **A child's garden of law and order.** *Psychology Today*, 1970(Dec), Vol. 4(7), 29-31, 62-64.—406 10-14 yr. old Ss from 7 cultures were intensively interviewed concerning their conception of the meaning and purpose of rules and laws. Ss focused on the content and benefits of rules, not on punishment for disobedience, and believed that chaos and conflict would follow if rules did not exist. Fair rules were defined as those based on consensus and applied equally. While obedience seemed most likely encouraged by nurturant strategies, disobedience was felt to be right under some circumstances.—*E. J. Posavac.*

9673. Vezin, L. & Mathieu, J. P. (Sorbonne, Lab. of Genetic Psychology, Paris, France) **Mode de transmission d'un principe technique et acquisition de ce principe chez des enfants de C.E.1 et C.M.1.** [Mode of transmission of a technical principle and acquisition of that principle by children in C.E.1 and C.M.1.] *Bulletin de Psychologie*, 1969-1970, Vol. 23(17-19), 1060-1065.—Evaluated the ability of 72 boys to comprehend the principal of converting rotary to reciprocal motion following the demonstration of the principle in 3 different ways. Evidence of understanding of the principle involved was assessed in 3 ways: by recognition from a drawing of the essential parts of the apparatus, by means of an 8-item TF test regarding operation of the parts, and by recognizing and designating in several ways the parts and functioning of a similar apparatus. Comprehension of the principle of functioning showed no significant difference under the 3 situations for the younger boys. Transfer of the principle learned to a different apparatus showed no better performance under 1 condition than the others. The different methods of presenting the principle showed the advantage of the older child.—*R. E. Smith.*

9676. Wingfield, Arthur. (Brandeis U.) **Methodology in psycholinguistics research.** *British Journal of Disorders of Communication*, 1969(Oct), Vol. 4(2), 117-126.—Presents a sampling of research questions and methodology having specific reference to the study of 1st-language learning in children. 3 major topics are considered: (a) investigations into the possible role of language in regulating behavior, (b) studies of the development of semantic categories in normal and mentally retarded children, and (c) research on the acquisition of grammatical rules which may be thought to structure fluent discourse. The general problem area, specific examples of the type of investigations conducted in that area, and some illustrations of the kinds of information such experiments may yield are described. (22 ref.)—*Journal summary.*

9677. Wooster, Arthur D. (U. Nottingham, Inst. of

Education, England) **Assessment of the ability to respond to verbally labelled concepts.** *British Journal of Disorders of Communication*, 1969(Oct), Vol. 4(2), 127-133.—Presents a method of investigating the young child's ability to respond to verbal instruction which does not require speech from him. From a series of varied blocks or photographs the S is instructed to pick 1 embodying a relational adjective, e.g., biggest or longest. Reliability of the method was examined in 24 5-5.5 yr. old upper-, middle-, and lower-class children. Material of increased complexity for use with older children was evaluated with 36 6-6.5 yr. old West Indian, British lower- and middle-class children. It is concluded that this is a valid method for investigating the existence of verbally labeled concepts whose meaning for the individual, whether public or private, is determined by reference to his nonverbal responses. Social class and a Creole language background are considered as possible sources of difficulty impairing the processes of acquiring and employing the adjectives signifying relational concepts studied.—*Journal summary.*

Abilities

9678. Ayllon, Maurie & Snyder, Susan. (Southern Illinois U.) **Behavioral objectives in creative dramatics.** *Journal of Educational Research*, 1969(Apr), Vol. 62(8), 355-359.—Attempted to measure the effects of 2 distinct types of stimuli on the behavior of 5 1st grade children in a creative dramatics situation. The 1st stimulus class used was verbal prompts. The number of responses to these prompts was counted for each child in each of 5 sessions. The number of prompts was increased from 1-17 and then decreased to 1. 1 prompt produced a median of 6 responses and 17 produced a median of 35. The 2nd type of stimulus was the performance of a child used as a model. The number of motor and verbal responses to this stimulus/child were counted. When the model used was a consistently high scorer, the scores of the others were high, and when the model was a low scorer, the scores of the others were lower. Both experiments indicate that the performance of children in a creative dramatics situation is influenced by the stimuli presented to them and that the relationship between the stimuli and the performance can be quantified.—*Journal abstract.*

9680. Martens, Rainer. (U. Illinois, Children's Research Center) **Social reinforcement effects on preschool children's motor performance.** *Perceptual & Motor Skill*, 1970(Dec), Vol. 31(3), 787-792.—Determined the effects of positive, negative, and combined social reinforcement on the accuracy of motor performance among 50 preschool boys and girls. Reinforcement was administered on a contingency basis. Arithmetic error indicates significant differences between the sexes for initial trials. No significant social reinforcement effects were obtained. The failure of social reinforcement to influence complex motor performance is explained by the lack of control by an individual in varying his own performance.—*Journal abstract.*

9681. Phillips, C. J. (U. Birmingham, England) **The**

Illinois Test of Psycholinguistic Abilities: A report on its use with English children and a comment on the psychological sequelae of low birth-weight. *British Journal of Disorders of Communication*, 1968(Oct), Vol. 3(2), 143-149.—Hypothesizes that the lower IQs reported in low birth weight children may be derived from the chronic impairment of specific areas of functioning rather than an inferiority of the whole mental system. 48 normal and 116 low birth weight British children (mean age 5.5 yr.) were tested with a modified form of the Illinois Test of Psycholinguistic Abilities (ITPA) and the Stanford-Binet, Form L-M. In the 3 tests of visual input on the ITPA, the low birth weight Ss were inferior to the normals at the .01 level of probability. On the 3 Auditory-Vocal tests differences did not reach significance. It is concluded that "below average cognitive development among prematurely born children may be associated at an early age with specific lower order functions in the visual rather than the auditory modality, and that traces of this condition are still found at ages 5 and 8 years."—S. Knapp.

9682. Roberge, James J. & Paulus, Dieter H. (Temple U., Coll. of Education) **Developmental patterns for children's class and conditional reasoning abilities.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 191-200.—Examines quantitative differences in the development of children's class and conditional reasoning abilities at specific grade levels (4, 6, 8, and 10) and for different types of content (concrete-familiar, abstract, and suggestive). Tests of class and conditional reasoning were administered to 263 Ss who were members of 13 classes which were drawn randomly from 3 suburban public school systems. An analysis of variance for a random sample of the students (100 boys and 100 girls) revealed significant ($p < .01$) differences between types of reasoning and among grade levels and content dimensions. Significant ($p < .01$) Grade Levels \times Types of Reasoning and Types of Reasoning \times Content Dimensions interactions were also obtained. Sex differences were slight and nonsignificant ($p < .05$). (33 ref.)—*Journal abstract*.

9684. Siegel, Alexander W. & Kresh, Esther. (U. Pittsburgh) **Children's ability to operate within a matrix: A developmental study.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 232-239.—80 white and Negro preschool and elementary schoolchildren, 4, 5, 6, 7, and 8 yr. of age, were presented 3 tasks intended to investigate their ability to deal with certain aspects of classification in a 3×3 matrix format. Stimuli were the 9 combinations of 3 shapes and 3 colors, set in a matrix, and the 6 attribute stimuli. Performance on all 3 tasks increased with age. On all 3 tasks the performance of the 4-yr-olds was minimal and little different from chance, whereas the performance of the 8 yr. olds was near maximum. The performance of white Ss was slightly, but not significantly, superior to that of Negro Ss at all age levels on all tasks. Differential patterns of task inter-correlations, and differential performance increments on the different tasks as a function of age are discussed in terms of the oldest Ss' "concrete-operational" functioning, and the required production of different kinds of verbal mediators.—*Journal abstract*.

Perception

9685. Abbs, Mary S. & Minifie, Fred D. (U. Wisconsin) **Effect of acoustic cues in fricatives on perceptual confusions in preschool children.** *Journal of the Acoustical Society of America*, 1969(Dec), Vol. 46(6, Pt. 2), 1535-1542.—Tested 17 3-5 yr. old children with normal hearing to determine their ability to discriminate among fricatives presented in consonant-vowel (CV) and vowel-consonant (VC) combinations with 3 vowels. Syllable pairs were presented to Ss for each possible fricative comparison, with consonant position and vowel being the same in any 1 pair. The stimulus tape was analyzed to determine durations of the consonants and vowels, peak amplitude of the fricatives, and center frequency and bandwidth of the resonance curves of each of the fricatives. The contribution of these acoustic cues to discrimination among the fricatives was evaluated. Data indicate the voiced-unvoiced distinction to be facilitated in VC syllables by the ratio of consonant duration to vowel duration. The fricatives /s/ and /z/ were set apart from the other fricatives by their high intensity, high frequency, and shorter spectrums, thus making discriminations between /s/ or /z/ and the other fricatives considerably easier. The highest discrimination error rates were observed in the pairs where there were neither voicing differences nor significant spectral differences between the 2 fricatives. Considerably lower discrimination error rates were observed when either voicing differences were present between 2 fricatives or there were significant spectral differences.—*Journal abstract*.

9690. Kaess, Dale W. (Washington State U.) **Measures of form constancy: Developmental trends.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 296.—54 children (6, 8, and 10 yr. old) were randomly assigned to 2 treatment groups denoted by the variation between angles at which 3 rectangular forms were presented. Ss identified the objective shape of a single form by pressing 1 of 3 buttons. 144 responses were subjected to 2

separate analyses. It appeared that form constancy performance increased with age, when form constancy involved perception of the same physical shape regardless of its angle of orientation.—*P. Hertzberg.*

9691. Kempler, Bernhard. (Georgia State U.) **Stimulus correlates of area judgments: A psychophysical developmental study.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 158-163.—59 children from the 1st, 3rd, 5th, and 7th grades made "large-small" judgments of the areas of 100 rectangles differing systematically from each other in heights and widths. The method of single stimuli was used and the Ss were retested 1 wk. after their 1st session. Results were (a) all 4 age groups applied the term large to about the same number of stimuli; (b) there was a significant increase in the mean width of the large category between Grades 1 and 3; and (c) linear discriminant weights for heights and widths showed a shift with age from an overemphasis on height to an approximately equal weighting of height and width. Results support Piaget's theory of "decentration" in perceptual development, i.e., the increasing attention to and coordination of multiple attributes of stimuli. It is suggested that research into the stimulus correlates of quantity judgments is valuable to current studies of the conservation of quantity.—*Journal abstract.*

9694. Taylor, John A. & Wales, Roger J. (U. Edinburgh, Scotland) **A developmental study of form discrimination in pre-school children.** *Quarterly Journal of Experimental Psychology*, 1970(Nov), Vol. 22(4), 720-734.—Using a matching-from-sample technique, the discriminative ability of 24 preschool children was tested twice, at mean ages 3.8 yr. and 4.9 yr., in relation to an independent test of their comprehension of the notion "same." A sequence of 3 stages is described, for both shape and orientation discrimination; in the 1st, characterized by a large number of errors, S appears to respond largely in terms of proximity of a comparison figure to the standard; in the 2nd his responses reflect gross aspects of similarity between the figures in the comparison set, in that several matches are made to 1 standard all of which have certain attributes in common with it. Finally, correct and unique choices are made. Attributes are used in differentiating figures are described, and a number of theoretical methodological problems are discussed. (23 ref.)—*Journal abstract.*

9704. Vroegh, Karen. (Inst. for Juvenile Research, Chicago, Ill.) **Masculinity and femininity in the elementary and junior high school years.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 254-261.—Investigates the correlates of masculinity and femininity as determined by teachers and peers, and their relationship in Grades 1-3, 4-6, and 7-8. 209 boys and 201 girls took a personality test, and were judged as to appropriateness of gender identity. Ss in Grades 1-3 took the Early School Personality Questionnaire; Ss in Grades 4-6 took the Children's Personality Questionnaire; and Ss in Grades 7-8 took the Junior-Senior High School Personality Questionnaire. Although there was agreement between teachers' and peers' concepts of gender identity, the data involving the peers allowed more specific conclusions about masculinity and femininity in Grades 1-8. In Grades 4-6, the correlates of masculinity

were social, intellectual, and psychological competence. The correlates of femininity in that grade group indicate traits of traditional "femininity" (e.g., patient) as well as of competence. Masculinity and femininity in Grades 4-6 were related to their counterparts in Grades 7-8, but not in Grades 1-3.—*Journal abstract.*

9705. Walls, Richard T. & Cox, Janet. (West Virginia U.) **Disadvantaged and nondisadvantaged children's expectancy in skill and chance outcomes.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 299.—Tested 80 disadvantaged and nondisadvantaged children, 3 2nd, 42 3rd, and 35 4th grade Ss, randomly assigned to 4 perception-reality treatments: perceive skill-actually skill, perceive skill-actually chance, perceive chance-actually chance, and perceive chance-actually skill. Ss were also asked questions concerning their occupational aspirations and were administered the Internal-External Locus of Control Scale for Children. Findings indicate "greater aspiration discrepancy scores in chance controlled conditions as well as in those perceived to be chance controlled." More downward shifts following success in the chance condition were noted than in the skill condition. While more disadvantaged girls had a general external control expectancy than nondisadvantaged girls, the opposite was true of boys. Among disadvantaged Ss, males showed a more internal locus to control while females were more external.—P. Hertzberg.

9709. Borowitz, Gene H., Hirsch, Jay G., & Costello, Joan. (U. Illinois) **Play behavior and competence in ghetto four-year olds.** *Journal of Special Education*, 1970(Spr), Vol. 4(2), 215-221.—Describes and evaluates the play behavior of 4-yr-old boys from an urban housing project. Data were obtained from the obser-

vation of individual play sessions where a single S interacted with 2 Es. Observations were made via a 1-way mirror and the session tape recorded. Ss' behavior was rated as to competence and content as outlined by Erikson in his phase-specific developmental tasks. Results show that Es' judgments of overall competence correlated significantly with teacher ratings and psychological test scores (e.g., Stanford-Binet and Peabody Picture Vocabulary Test). Certain behaviors contributed more than others to the judgment of competence. Organization of play and developmental level reflected by the psychosexual content of the play were most highly correlated with judged competence. Quantity of speech was not significantly related to judged competence.—L. M. Glidden.

9710. Durojaiye, M. O. (Makerere U., Kampala, Uganda) **The relationship between controlled projection responses and sociometric status.** *Journal of Child Psychology & Psychiatry & Allied Discipline*, 1970(Nov), Vol. 11(2), 143-148.—Supports, using a Controlled Projection Test, previous findings using other projective techniques, on the relationship between sociometric status and responses to projective tests using verbal responses only. Sociometric tests were administered to 420 11-yr-old boys and retested 8 wk. later. Raven's Controlled Projection Test is demonstrated to be a sensitive tool for differentiating between popular and unpopular boys. (17 ref.)—*Journal summary.*

9711. Farnham-Diggory, S. & Ramsey, Barbara. (Carnegie-Mellon U.) **Play persistence: Some effects of interruption, social reinforcement, and defective toys.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 297-298.—56 Negro 5-yr-old girls were randomly assigned to 1 of 4 10-min treatment programs: (a) neutral (free play), (b) defective (free play with defective toys), (c) intervention (play interrupted by E), and (d) social reinforcement (matched S on interruption schedule socially reinforced on same schedule). Play persistence on parquetry blocks followed by the 10-min treatment and was the independent variable of interest. Success of the treatment variables was checked by comparing toy change on the 1st task. Interruption was the most significant factor, reducing persistence by about 1/2 compared to yoked controls. Results "suggest that constant intrusions upon the play activities of young children may set up emotional tensions, and/or scrambled expectancies, that interfere significantly with subsequent play persistence."—P. Hertzberg.

9717. Risley, Todd R. & Reynolds, Nancy J. (U. Kansas) **Emphasis as a prompt for verbal imitation.** *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 185-190.—Investigated the role of stressing or emphasizing certain words in a verbal presentation in determining which aspects of that presentation preschool children would imitate. 4- and 5-yr-old disadvantaged children were read sentences composed of varying numbers of short phrases. Ss repeated each sentence, but the accuracy of their imitations was not differentially reinforced. The teacher stressed (emphasized) certain words as she read each sentence. The proportion of words that were stressed was systematically varied. In general, Ss imitated only parts of most sentences. Stress was effective in influencing which parts of a sentence Ss would imitate, but only when relatively few words were stressed. Stressing a word increased the probability of S's imitating that word (and, to a large extent, the entire phrase containing that word) as an inverse function of the proportion of the words that were stressed.—*Journal abstract*.

9718. Ross, Sheila A. (Palo Alto Medical Research Foundation, Calif.) **A test of the generality of the effects of deviant preschool models.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 262-267.—Exposed 48 preschool children to a deviant model, a nondeviant model, or no model, in a toy store situation. Each S learned storekeeper procedures from a trained child model, served independently as storekeeper, then, while alone, selected 1 toy to keep. While the verbal instructions for the 3 conditions were identical, the behavior of the models differed, i.e., the deviant model took 3 toys, the nondeviant model took only 1 toy. The hypotheses were confirmed that Ss in the deviant model condition would exhibit the most deviant behavior and experience the most conflict.—*Journal abstract*.

9719. Steinman, Warren M. (U. Illinois) **The social control of generalized imitation.** *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 159-167.—Manipulated instructions, discrimination procedures, and sources of reinforcement to determine the bases for the maintained "nonreinforced" imitations observed in generalized imitation research. 6 7.2-9 yr. old girls

received imitation training from 2 female graduate student Es. 1 E modeled only reinforced responses; the other modeled only nonreinforced responses. Ss imitated all responses when no reinforced alternative was available, even though results of choice procedures and special instructions clearly demonstrated that they discriminated reinforced from nonreinforced responses. Instructions not to perform nonreinforced imitations immediately eliminated these behaviors. It is suggested that social and instructional variables may be largely responsible for generalized imitation. (19 ref.)—*Journal abstract*.—*Journal abstract*.

Parent-Child & Family Relations

9721. Anthony, E. James & Koupernik, Cyrille. (Eds.) (Washington U.) **The child in his family.** New York, N.Y.: Wiley-Interscience, 1970. xxxii, 492 p. \$12.50. —Presents papers written for members of the 7th Congress of the International Association for Child Psychiatry and Allied Professions. This collection offers extensive coverage of variations in family life from primitive, isolated areas to sophisticated urban centers and views the displacement of family roles in a changing world.

9722. Armentrout, James A. (St. Louis U., Medical School) **Relationships among preadolescents' reports of their parents' child-rearing behaviors.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 695-700. —Calculated intercorrelations among Child's Report of Parental Behavior Inventory dimension scores attributed by 147 5th and 113 6th graders to their mothers and fathers. Although the dimensions are hypothetically orthogonal, consistent patterns of negative correlations were found between the extent of parental control and both the degree of parental acceptance and the laxness of parental discipline. Consistently high positive correlations were found between parent pairs' scores on each of the separate dimensions. Characteristics of the S population and method of questionnaire administration were discussed; it was suggested that young children's reports of parental behavior may not be sufficiently differentiated to support a 3-dimensional model appropriate for the views of older children and adults.—*Journal abstract*.

9723. Braginsky, Dorothea D. (Fairfield U., Inst. for Human Development) **Parent-child correlates of Machiavellianism and manipulative behavior.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 927-932. —Reports the primary findings of a study to establish certain relationships between 10-yr-old children and their parents with respect to the Machiavellian (Mach) scales and the children's manipulative interpersonal behavior: (a) the parents' scores on both the Mach IV and Mach V were, individually, unrelated to their children's Mach scores; (b) although various combinations of the Mach scales (category patterns) were inversely related for mothers to the children's Mach scores, there was no relationship between these 2 variables for fathers; (c) these combinations for each parent, separately, were inversely related to the chil-

dren's success at manipulative behavior. (18 ref.)

(National Inst. of Mental Health, Bethesda, Md.) **Individual thinking and family interaction.** *Journal of Nervous & Mental Disease*, 1970(Sep), Vol. 151(3), 187-202.—Studied the relationships among a set of variables derived from 3 experiments on family interaction and individual thinking. 12 variables were factor analyzed, and factor scores were obtained for 14 of 16 families in the sample. Findings suggested grouping the variables into those that estimated experiential sensitivity of the family group and those that measured the pervasiveness of particular expressive forms. It is suggested that variables of shared experiential sensitivity in families are more closely and generally related, either as cause or effect, to the thinking of its members than variables of expressive form. The latter, it was postulated, had unique or distinctive function and meaning for each family, and this meaning could be estimated through the use of the family's scores on the 2 experiential sensitivity factors. ADOLESCENCE

9733. Bejat, Marian. (Academy of the Romanian Socialist Republic, Inst. of Psychology, Bucharest) **Conceptual and imaginal thinking in problem-solving.** *Revue Roumaine des Sciences Sociales-Série de Psychologie*, 1970, Vol. 14(1), 65-77.—Emphasizes the influence exerted on the problem-solving process by individual differences related to the level reached in the development of abstract and imaginal thinking and by the degree of their correlations. Experiments conducted on 32 mathematically-inclined students of higher grades are described involving application of perspicacity, as well as recurrent and geometrical problems. It is noted that usage of graphs and symbols proves helpful in grasping the relations, in increasing the speed of thinking, and in improving the results. It is concluded that high performances in math depend on certain intellect, and the conscientious effort applied.—f. Sirotnin.

9734. Biller, Henry B. & Bahm, Robert M. (U. Rhode Island) **Father absence, perceived maternal behavior, and masculinity of self-concept among junior high school boys.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 178-181.—Explores the relationship between perception of maternal encouragement of masculine behavior and masculinity of self-concept in father-absent and father-present junior high school boys. Ss were 10 early father-absent (beginning before age 5) boys, 10 late father-absent (beginning after age 5) boys, and 20 father-present boys. An adjective checklist was used to measure masculinity of self-concept, and a Q-sort technique (Block's Child Rearing Practices Report) was employed to assess perceived maternal encouragement of masculine behavior. Compared to the father-present boys, the early father-absent boys were found to have significantly less masculine self-concepts. For early father-absent boys, but not for late father-absent boys or father-present boys, a significant positive relationship was found between perceived maternal encouragement of aggression and masculinity of self-concept.—*Journal abstract.*

9735. Borowicz, Norbert J. (Pennsylvania State U.) **A semantic differential study between lower-class and middle-class pupils in the seventh and twelfth grades.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1612.

9736. Cook, Keith E. (U. Maine) **Differences between self-concepts of disadvantaged and non-disadvantaged high school students within certain types of rural and urban communities.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1615.

9737. Dawson, Ford. (American U.) **An analytical study of the effects of maternal employment, of same-sex chum denial in preadolescence, and of residential mobility on self-actualization achievement in a sample of adolescents.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 925.

9738. Douce, Pearl D. (Utah State U.) **Selected aspects of personality related to social acceptance and clothing oriented variables.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3730.

9739. Frisch, Rose E. & Revelle, Roger. (Harvard U., Center for Population Studies) **Height and weight at menarche and a hypothesis of critical body weights and adolescent events.** *Science*, 1970(Jul), Vol. 169(3943), 397-398.—Analyzed the adolescent growth

spurt by determining the height and weight for 181 girls at the age of initiation of the spurt of growth, and at the time of maximum rate of growth, using data from 3 longitudinal growth studies. Data indicate that early and late maturing girls had menarche at the same mean weight, but late maturers were taller at menarche. 2 other major events of adolescence, initiation of the weight growth spurt and maximum rate of weight gain, also occurred at an invariant mean weight. The hypothesis is proposed that a critical body weight may trigger each of these adolescent events. Such an interaction would explain the secular trend to an earlier menarche. (20 ref.)—*Journal abstract.*

9740. Head, Charles B. (U. Oklahoma) **Differences under social stress between accepted and rejected children during the adolescent phase of ego development.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3856-3857.

9741. Himber, Charlotte. (YMCA, New York, N.Y.) **Inside teenagers.** *Adolescence*, 1970(Fal), Vol. 5(19), 285-302.—A plea for the use of sensitivity training for teen-agers including a guide for parents and ground rules for participants.—A. B. Warren.

9742. Holstein, Constance B. (U. California, Berkeley) **Parental consensus and interaction in relation to the child's moral judgment.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1888-1889.

9743. L'Abate, Luciano. (Georgia State U.) **The status of adolescent psychology.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 201-205.—Presents 3 different analyses to assess the status of adolescent psychology: (a) number of publications relating to adolescence, (b) extent of training facilities, and (c) frequencies of citation for significant contributors to this field. The overall ratio of adolescence references to total number of abstracts is slightly above 1. Training facilities, on the basis of a questionnaire, are meager and little actual faculty interest appears, while there are no contributors who have specifically contributed to adolescence. Results suggest that increasing status should be accorded to this stage of development. (33 ref.)—*Journal abstract.*

9744. Laosa, Luis M. (U. Texas) **La expresión y el control de la impulsividad como una función de la conducta intelectual en niños.** [Expression and control of impulsiveness as a function of intellectual behavior in children.] *Revista Interamericana de Psicología*, 1970(Jun), Vol. 4(2), 123-129.—Attempted to understand the relationship, by sex and age, between intellectual performance variables and measures of impulse expression and control. Scores on 4 subtests of the WISC and WAIS were compared with performance on 3 Personality Research Form scales—Impulsivity (Imp), Harmavoidance (Ha), and Order (Or)—for 297 children of 3 age groups (11.7, 14.7, and 17.7 yr.). No significant relationships were found between Imp or Ha and any of the measures of intellectual performance. Significant relationships ($>.01$) between Or and WISC and WAIS variables show that untidy Ss perform better in vocabulary and arithmetic than neat or organized Ss. (Portuguese summary)—*English summary.*

9745. McClure, James M. (State U. New York, Buffalo) **The responses of senior high school students to questionnaire items reflecting three provisions of the Bill of Rights.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1514.

9746. Nguyen-Xuan, Anh. (Centre National de la

Recherche Scientifique, Paris, France) **Etude par le modèle factoriel d'une hypothèse sur les processus de développement: Recherche expérimentale sur quelques aptitudes intellectuelles chez des élèves du premier cycle de l'enseignement secondaire.** [Investigation of a hypothesis concerning the development process using a factorial model: Experimental research on intellectual aptitude of students in the initial phase of secondary education.] *Bulletin de l'Institut National d'Etude du Travail et d'Orientation Professionnelle*, 1969, Série 2, Vol. 25(Numéro Spécial), 235 p.—Tested the hypotheses that (a) from 9-10 and 16-17 yr. of age there occurs a differentiation of primary mental abilities, which become less and less connected with the verbal integrative function, and (b) toward age 12-13, and up to age 17-18, primary reasoning ability emerges and becomes more importantly involved in the performance of a greater number of intellectual tasks. A battery of 12 aptitude and relational reasoning tests were administered for a transverse study of 556 11-17 yr. olds, and a battery of 15 similar tests for a longitudinal study from age 11-13 to 17-18. Factor analysis of results show: (a) confirmation of the integrative and developmental nature of general relational reasoning ability; (b) spatial tests are the best indicators of relational reasoning ability; (c) toward age 15-16, a "spatio-symbolic" factor emerges, hypothesized as a high-level integrative factor concerned with education of relationships; (d) at the age when general integrative ability is of a relational reasoning nature, it influences all intellectual tasks; (demonstration of the 1st hypothesis can only be quantitative, results suggesting that both developmental processes occur at the same time); and (e) in cyclic succession, the processes of differentiation and hierarchical integration occur by the emergence of higher level integrative ability as a limited ability which increases in importance until it becomes a general ability, simultaneously displaying qualitative and quantitative development in the factorial model. (152 ref.)—T. N. Webster.

9747. Pauker, Jerome D. (U. Missouri, Medical School) **Fathers of children conceived out of wedlock: Prepregnancy, high school, psychological test results.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 215-218.—Compares 9th grade MMPIs and other information of 94 boys reported to have fathered out-of-wedlock children at some later date with data from 94 control 9th grade boys, each of whom was matched with an out-of-wedlock group for age, socioeconomic status, and school attended. Critical ratios for differences between means of correlated samples revealed the out-of-wedlock group to be significantly ($<.02$) higher on MMPI Scales F, 8, and 9, but with the overlap very great and the differences small. The 2 groups were virtually identical on 2 tests of intellectual functioning. The out-of-wedlock boys were much more similar to their controls than different.—*Journal abstract.*

9748. Schwartz, Richard K. (U. Colorado, School of Education, Colorado Springs) **An interview procedure for studying adolescent perceptions.** *Adolescence*, 1970(Fal), Vol. 5(19), 313-322.—150 adolescents were interviewed using a technique designed to evoke either positive or negative feelings. Content was categorized according to topics and affective tone. The self was most often discussed, peers second, and then authority figures.—A. B. Warren.

9749. Smith, Thomas E. (U. South Carolina) **Some bases for parental influence upon late adolescents: An application of a social power model.** *Adolescence*, 1970(Fal), Vol. 5(19), 323-338.—Studied 228 college freshmen using a questionnaire regarding parental influences and power. A social power theory defining 5 types of power was used.—A. B. Warren.

9750. Thomas, L. Eugene. (U. Connecticut) **Family correlates of student political activism.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 206-214.—The sample consisted of 1 parent and a college-age child from 60 white upper-middle-class families, in which the parent was visible in the community for political participation; $\frac{1}{2}$ of the parents held liberal, and $\frac{1}{2}$ conservative political views. Liberal and conservative children differed significantly in radical activism, with 57% of the liberal and only 17% of the conservative group having taken part in 2 or more such activities; both groups were high in conventional political participation. For the liberal sample, parental dedication to ideological causes was found to be significantly associated with radical political activism for male and female students, with family permissiveness also significantly associated with activism for female students. Extent of family interaction was found to be negatively associated with student activism of males, but not for females, in the conservative sample. Disapproval of radical activism by conservative parents apparently contributed to the low level of activism of their children. Overall data suggest a rather strong family influence in predisposing a college-age child to radical political activism.—*Journal abstract*.

9751. Wagner, Hilmar. (U. Texas, El Paso) **Adolescent problems resulting from the lengthened educational period.** *Adolescence*, 1970(Fal), Vol. 5(19), 339-344.—A. B. Warren.

9756. Hansen, Gary D. (Oregon State U.) **Home managerial tasks, perceived competence, and related social, psychological, and economic consequences for retired couples.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3730-3731.

9757. Kaplan, Howard B. & Pokorny, Alex D. (Baylor U., Medical School, Houston, Tex.) **Age-related correlates of self-derogation: Report of childhood experiences.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 533-534.—Data from 500 adults showed high negative affect evoked by subjective consideration of personal qualities, achievements, and behavior associated with a different pattern of remembered fears and circumstances for subgroups of different age at the time of retrospective report. Young adults had high self-

derogation (SD) scores with memory of childhood fear of parental punishment, report of poorer grades than most, and feelings of having been poorer looking than other children. Ss aged 30-39 had high SD scores when they reported having been afraid of being laughed at by other children. 40-49 yr. old Ss had high SD with memory of having had poor health.—R. L. Sulzer.

SOCIAL PSYCHOLOGY

9758. Möbus, Claus & Ahrens, Hans J. (U. Heidelberg, Inst. of Psychology, W. Germany) **Multivariate Weiterentwicklung eines Modells zur Prognose von Wahlergebnissen.** [Further development of a model to predict election results based on multivariate analysis.] *Zeitschrift für experimentelle und angewandte Psychologie*, 1970, Vol. 17(3), 386-413.—The model was based on "indifference curves," i.e., isobaric curves of degrees of satisfaction or expected usefulness of decisions in a multidimensional space. The predictive power of the model was tested by collecting initially judgments on 70 variables for 6 candidates from 40 Ss and a subsequent mock election. Differences between the observed results and the predicted outcome are discussed in terms of discrepancies between judgments and actual behavior. (English & French summaries) (42 ref.)—W. J. Koppitz.

9759. Ross, Kenneth W. (American U.) **Ultimate values in political theory: Traditionalism vs. behaviorism.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2464-2465.

9760. Stoessinger, John G. (United Nations, Political Affairs Div., New York, N.Y.) **China and America: The burden of the past.** *American Journal of Psychotherapy*, 1970(Oct), Vol. 24(4), 579-596.—Traces America's involvement in Chinese affairs through recent centuries, and the accompanying misinterpretations by both sides regarding the nature of the other's intent. Contends modern attitudes have seeds in specific historical events. (15 ref.)—W. Vernon.

CULTURE & SOCIAL PROCESSES

9761. Angel, Ernest. (New York U.) **Cultural distance: A study of measures and modes of the distance felt by groups of American intellectual professions in relation to contemporary American culture and its practiced "values."** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3882-3883.

9762. Barron, Frank & Young, Harben B. (U. California, Santa Cruz) **Personal values and political affiliation within Italy.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 355-367.—Statements in a questionnaire about personal and social philosophy were correlated with the position on the political spectrum of 82 young Italian males. The influence of the Catholic church was found to be quite strong. The Left splits sharply from Center and Right on matters having to do with divorce and sexual freedom; the Center is less exclusively determined by dogma but still is clearly orthodox and conservative, while the Right is dominated by its hatred of communism and its emphasis on formalism and central authority. (22 ref.)—*Journal abstract*.

9772. Gardiner, Harry W. & Lematawekul, Dalad. (Coll. of St. Teresa) **Second-generation Chinese in Thailand: A study of ethnic identification.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 333-344.—176 adolescents were separated into those who used Chinese and those who used Thai family names; and those who did not attend Chinese schools. A number of standardized measures were used. 2nd-generation Chinese who used Chinese family names and/or attended Chinese schools had closer ethnic identification with the Chinese. Scores on various scales did not correlate with identification. Areas of possible future research are suggested. (32 ref.)—*A. Krichev.*

9773. Gift, Mack D. (U. Utah) **Self-concept and social change among black youth.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1372.

9774. Hartsough, W. Ross & Fontana, Alan F. (Veterans Administration Hosp., West Haven, Conn.) **Persistence of ethnic stereotypes and the relative importance of positive and negative stereotyping for association preferences.** *Psychological Reports*,

1970(Dec), Vol. 27(3), 723-731.—Examined the stereotyping of 10 ethnic groups by American college students over a 30-yr period by comparing data from 1932, 1950, and 1961. 87 Ss were used. There was much variation among the time periods but persisting, “core” stereotypes were found for 8 of the groups. Evaluative stereotyping was highly related to preferences for association with ethnic group members in both 1932 and 1961. Subdivision of evaluative stereotyping into its positive and negative components showed that associative preferences were completely predicted by the negative component. The positive component was unrelated to association preferences and served to weaken the predictive power of the negative component when combined with it. The interpretation is offered that substantial stereotyping and prejudice remain among college students but that students are becoming increasingly sophisticated and subtle in their manifestations of them. (15 ref.)—*Journal abstract.*

9775. Hayes, Edward D. (U. Florida) **A comparative study of the manhood experiences of black and white young adult males.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2105.

9776. Henry, Franklin J. (McMaster U., Hamilton, Ontario, Canada) **The measurement of perceived discrimination: A Canadian case study.** *Race*, 1969(Apr), Vol. 10(4), 449-461.—Studied the amount and kind of discrimination perceived among 82 Negroes and 109 Japanese in a Canadian urban area. Objective indices indicate that Japanese were not discriminated against but the Negroes were. The Japanese were not residentially concentrated, and their occupations, housing, level of education, and incomes were equal or superior to the average person in the area. The Negroes, however, were residentially concentrated, and their level of income, occupations, and housing were below average. The memory of discrimination among Ss interviewed is examined.—*G. Steele.*

9777. Lammers, Donald M. (Syracuse U.) **Self concepts of American Indian adolescents having segregated and desegregated elementary backgrounds.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 930.

9778. Marx, Gary T. (Harvard U.) **Protest and prejudice: A study of belief in the black community.** New York, N.Y.: Harper & Row, 1967. xxviii, 228 p. \$8.95.

9779. Peres, Yochanan & Levy, Zipporah. (Columbia U.) **Jews and Arabs: Ethnic group stereotypes in Israel.** *Race*, 1969(Apr), Vol. 10(4), 479-492.—Discusses the concept stereotype and investigates “the stereotype which Arabs and Jews have of each other, and also the stereotyped image each group has of itself.” 60 Arab and Jewish undergraduates were interviewed. The image of centrality, inferiority, deprivation, interdependence, salience and visibility, and the political and spiritual attitudes of the minority and majority are discussed and compared.—*G. Steele.*

9780. Thomas, Charles W. (U. Southern California, Watts Health Service) **Challenges of change.** *American Behavioral Scientist*(Mar), Vol. 12(4), 17-20.—Discusses the problems encountered by people of Afro-American descent. It is suggested that 3 choices are available to them in today's society: (a) “they can continue to function in a social structure that forces them to be essentially mentally ill”; (b) “they can engage in self-destructive activities such as suicide or homicide”; or

(c) "they can become psychologically healthy by actively participating in and supporting the black communion." It is concluded that the need for change in human relations has become intensified and requires greater effort by each individual to achieve effective resolution. —M. West.

Social Structure & Social Role

9781. Dickson, Stewart. A reply to Mr. McKinlay's comment. *British Journal of Sociology*, 1969(Mar), Vol. 20(1), 88-89.—In response to J. B. McKinlay's (see PA, Vol. 45:Issue 5) "Comment," some of the references that demonstrate the greater use of medical services by the middle class were listed. Time and financial limitations on sampling procedure were presented and the multiple criteria—income, education, occupation, dwelling, political views—employed to delimit "middle class" were identified. Regarding McKinlay's 3rd criticism, lack of direct evidence on dental usage, dental examinations had been conducted and were reported elsewhere. The criticism of "research regression" to gathering basic data seems unjustified, given the lack of such information. —K. G. Shaver.

9782. Durlak, Jerome T. (Michigan State U.) **Role circumscription, communication and the modernization process.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2492-2493.

9783. Gross, Edward. (U. Washington) **The definition of organizational goals.** *British Journal of Sociology*, 1969(Sep), Vol. 20(3), 277-294.—Defines organizational goals as embracing more than output aims. Support goals of adaptation, management, motivation, and position which contribute to the system's survival are considered as goals in the same sense as output goals. The assumption that activity not directed toward the overall goals of the organization does not make a contribution to those goals is denied. An analysis of a university is described. (22 ref.)—S. Knapp.

9784. Olmsted, Allan D. (U. Washington) **Social class, anomie, and anomia.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1889-1890.

9785. Runciman, W. G. (U. Sussex, Brighton, England) **What is structuralism?** *British Journal of Sociology*, 1969(Sep), Vol. 20(3), 253-265.—Reviews the literature and examines the status of structuralism as a distinctive doctrine in the analysis of societies. It is concluded that structuralism does not "stand for a more distinctive standpoint than a belief in the applicability of rigorous models to social behavior...." (35 ref.)—S. Knapp.

Religion

9786. Hillman, James. (C. G. Jung Inst., Zurich, Switzerland) **Insearch: Psychology and religion.** New York, N.Y.: Charles Scribner's Sons, 1970. 126 p. \$2.25(paper).

Cross Cultural Comparison

9788. Barrett, Gerald V. & Franke, Richard H. (U. Rochester, Measurement Research Center) **"Psychogenic" death: A reappraisal.** *Science*, 1970(Jan), Vol.

167(3916), 304-306.—Hypothesized that social, economic, and medical variables account for the differences in death rates cross-nationally. Data on death rates available from United Nations publications for the countries studied by D. C. McClelland (see PA, Vol. 41:8871) allowed examination of 31-34 countries for 1950 and 1965. It is felt, however, that McClelland's psychological motives of achievement, affiliation, and power, determined for each country by content analysis of children's stories, did not correlate with "psychogenic" death rates. Results indicate that status integration correlated positively with homicide and negatively with deaths from suicide and ulcers. Low life expectancy, wealth, economic growth, wine consumption, and zinc (cadmium) consumption correlated with deaths from homicide, suicide, ulcers, cirrhosis, and hypertension, respectively. (23 ref.)—*Journal abstract.*

9789. Blane, Howard T. & Yamamoto, Kazuo. (U. Pittsburgh) **Sexual role identity among Japanese and Japanese-American high school students.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 345-354.—Japanese students were found to be more feminine than either Japanese or Caucasian-Americans in Hawaii as measured by the CPI Femininity scale and the Franck Drawing Completion Test. The results are related to different role models for masculinity in Japan and the Eastern part of the world than in the West with its proof-of-masculinity models. (18 ref.)—A. Krichew.

9790. Clement, David E., Sistrunk, Frank, & Guenther, Zenita C. (U. South Florida) **Pattern perception among Brazilians as a function of pattern uncertainty and age.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 305-313.—Ratings of pattern goodness and of pattern preferences were made by 96 Brazilian Ss of 4 age groups between 9-21. Results were similar to those found with American Ss of the same ages. Pattern goodness and preference were highly correlated with pattern uncertainty. (31 ref.)—A. Krichew.

9791. Colacicco, Mary G. (Purdue U.) **A comparison of item responses on the MMPI by selected American and foreign students.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1572.

9792. de Lacey, P. R. (Wollongong University Coll., New South Wales, Australia) **A cross-cultural study of classificatory ability in Australia.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 293-304.—Classificatory tests based on those of Piaget and Inhelder were administered to 4 groups of 6-10 yr. old Ss: aborigines with and without extensive contact with European culture and low and high socioeconomic level European children living in Australia. Only a small subsample of high-contact aborigines performed on a par with the European children, leading to the interpretation that environmental differences were the major influence in the performance differences found. (32 ref.)—A. Krichew.

9793. Deregowski, Jan B. & Byth, William. (U. Aberdeen, Scotland) **Hudson's pictures in Pandora's Box.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 315-323.—11 sophisticated Europeans and 14 unsophisticated Zambian domestics responded to 2 Hudson's Pictorial Perception Test stimuli displayed in "Pandora's Box." The European sample perceived depth under most situations; in no case did the Zambian sample perceive depth. This pictorial perception difficulty may be due to both perception and interpretive difficulties. (16 ref.)—A. Krichew.

9794. Manaster, Guy J. & Ahumada, Rene. (U. Texas) **Adolescent occupational aspirations and expectations in Puerto Rico and Mexico.** *Revista Interamericana de Psicología*, 1970(Jun), Vol. 4(2), 81-94.—Compared the occupational status aspirations and expectations of 914 10- and 14-yr-old upper-middle and upper-lower class adolescents in Puerto Rico and Mexico. An Occupational Interest Inventory was used to elicit descriptions of the Ss' fathers' occupation, and the Ss' occupational aspirations and expectations. These descriptions were rated according to occupational prestige scales and objective ratings of fathers' occupation, aspiration and expectation derived. Subjective ratings were derived from the Ss' ratings on graphic scales for these 3 job descriptions. Analysis of the variance techniques utilized showed the comparability of the sample, adequate understanding and use of the instrument, and differences between samples by country, sex, age, and socioeconomic status. The major inter-country difference found the Mexican adolescents higher in their aspirations and expectations for their future occupations. This difference was analyzed in view of subgroup differences and sample comparability. (Spanish & Portuguese summaries)—*Journal abstract*.

9795. Meade, Robert D. (Western Washington State Coll., Center for Cross-Cultural Research) **Leadership studies of Chinese and Chinese-Americans.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 325-332.—Chinese and Chinese-American college students ranked 9 issues of importance, discussed them under conditions of authoritarian, democratic, or laissez-faire leadership atmospheres, arrived at a group ranking, and then ranked them individually again. With Chinese Ss, authoritarian leadership and male leadership produced greater group cohesiveness. With Chinese-Americans, both authoritarian and democratic produced group cohesiveness as did male leaders. Emergent leaders appeared only in laissez-faire groups of Chinese with female leaders. Differences may be due to the Chinese being familiar with the authoritarian form of leadership only.—A. Krichew.

9796. Pecjak, Vid. (U. Ljubljana, Yugoslavia) **Verbal synesthesiae of colors, emotions, and days of the week.** *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 623-626.—Attempted to establish cross-cultural distribution of some verbal synesthesiae and their dependency upon semantic factors of evaluation, potency, and activity. 39 North Americans, 42 Flemish, 34 German, 45 Italian, 33 Japanese, 133 Dutch, 53 Turkish, and 78 Yugoslavian college Ss compared verbal series of colors and emotions, colors and days in the wk., and emotions and days in the wk. Most correlations among these groups were significant, although not extremely high. The correlations were lower between the frequencies of responses and D values, achieved from semantic differential scores, which express the degree of similarity among the semantic profiles of words.—*Journal abstract*.

9797. Sanford, Aubrey C. (U. Southern Mississippi) **A cross cultural study of industrial motivation.** *Southern Quarterly*, 1970(Jan), Vol. 8(2), 145-161.—Hypothesizes that A. H. Maslow's motivation theory is not applicable to industrial motivation in Latin America. The validity of the specific hierarchy is questioned. It is concluded that "Latin American culture places relatively little emphasis on work as a means for satisfying human needs," and that a motivation theory effective in the

United States "would not be nearly as effective in motivating Latins."—G. Steele.

9798. Seward, Georgene H. & Williamson, Robert C. (Eds.) (U. Southern California) **Sex roles in changing society.** New York, N.Y.: Random House, 1970. xii, 419 p. \$9.95.

9799. Tiberi, Emilio. (U. Milan, Medical & Surgical Faculty, Italy) **L'Italia dei francesi: II. Indagine psicologica su modelli socio-culturali condotta mediante l'analisi fattoriale ed altre metodologie.** [A Frenchmen's view of Italy: II. Psychological research on socio-cultural patterns conducted through factorial analysis and other methods.] *Bollettino di Psicologia Applicata*, 1968(Aug), Suppl. No. 88-90, 3-137.—Compares Italy and the Italians in a study conducted by the French and a similar study conducted by the Italians. Variables included are industry, business, agriculture, tourism, national character; as well as the social, religious, and political life of the people, temperament, customs, cities, great citizens, and relationships between the French and the Italians. Over 80 tables and graphs are presented recording statistics according to sex, civil status, professional category, age, and geographic location. Progress in Italy, as viewed by the French and then by the Italians, is included in this 2nd part. The comparison between the 2 images of Italy shows that there is little sociocultural difference between Italy and France. The French image of Italy is well disposed, and can be interpreted as a favorable sign toward a better international future. (4 p. ref.)—A. M. Farfaglia.

Family

9800. Baran, Stephen. (Brandeis U., Florence Heller Graduate School for Advanced Studies in Social Welfare) **Psychological types of responsible family members: Family exchange and career beginnings in two medical home care programs.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1886.

9801. Harelson, Anna M. & Harelson, Robert J. (United States International U., San Diego, Calif.) **A study of actualizing marital relationships with an emphasis on a power-strength concept.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2494-2495.

9802. Kagan, Jerome & Whitten, Phillip. (Harvard U.) **Day care can be dangerous.** *Psychology Today*, 1970(Dec), Vol. 4(7), 36-39.—The widespread acceptance of the idea of day care centers may be signaling a new form of child-rearing—strangers being responsible for a child. It is pointed out that such arrangements may not be ideal since the parents may become less concerned about what the child is being taught and the child may be deprived of close attachment to an adult. However, carefully planned day care centers can enrich the social contacts and development of children.—E. J. Posavac.

9803. Mack, Delores E. (Stanford U.) **The husband-wife power relationship in black families and white families.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1889.

9804. Martelle, Dorothy L. (Eastern Michigan U.) **Interracial marriage attitudes among high school students.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 1007-1010.—Examined 182 white and Negro high school students with a forced-choice questionnaire to ascertain whether 1 group favored interracial marriage more than

the other. Chi-square was applied to a 2×2 factorial design. Negroes were significantly more favorable toward interracial marriage than whites ($p < .001$). Males tended to favor interracial marriage slightly more than females. Interaction between the groups was unrelated to social or economic position, but the factors involved in the process were not identified. Suggestions were made for further research to explain the differential sex attitudes and longitudinal studies to determine what other factors might be involved in determining Negro and white attitudes toward interracial marriage.—*Journal abstract.*

9805. McIntire, Roger W. (U. Maryland) **Spare the rod, use behavior mod.** *Psychology Today*, 1970(Dec), Vol. 4(7), 42-44, 67.—The major requirements for a successful program of behavior modification include offering an adequate reward for performance of the behavior desired and ignoring the undesirable behavior. Since the attention of an adult is a powerful reward for children, both wanted and unwanted behaviors can be reinforced. The job of the parent is to select the behaviors to be reinforced and those to be ignored and then to set limits on behavior which are gradually loosened as the child matures.—*E. J. Posavac.*

9806. Toman, Walter & Toman, Eleonore. (U. Erlangen-Nurnberg, W. Germany) **Sibling positions of a sample of distinguished persons.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 825-826.—Investigated the sibling positions and sex-distributions of siblings of 215 distinguished men and 36 distinguished women. Oldest and only children appeared more often than chance. For men, there were twice as many male siblings. Similar trends were found for the females studied, although the numbers were too small for tests of significance, and the sex distribution was not noted. Possible explanations for these results in terms of the sampling procedure and psychological consequences of sibling position are suggested.—*S. Knapp.*

Social Change & Social Programs

9807. Frazier, Arthur & Roberts, Virgil. (U. California, Los Angeles) **A discourse on black nationalism.** *American Behavioral Scientist*, 1969(Mar), Vol. 12(4), 50-56.—Recounts the highpoints of the civil rights movement and how it has evolved into black power, noting the evolution of tactics, demands, participation, and guiding philosophy. Black nationalism is designed to confront the racist society, change the psyche of the black man, gain control of black communities as a 1st step in building prosperous progressive areas, and expose the hypocrisy of the white community so that it can free itself from racism.—*M. West.*

9808. Nesbitt, John A., Brown, Paul D., & Murphy, James F. ((Eds.)) (San Jose State Coll.) **Recreation and leisure service for the disadvantaged: Guidelines to program development and related readings.** Philadelphia, Pa.: Lea & Febiger, 1970. xx, 593 p.

9809. Thomas, Charles W. (U. Southern California, Watts Health Service) **Boys no more: Some social psychological aspects of the new black ethic.** *American Behavioral Scientist*, 1969(Mar), Vol. 12(4), 38-42.—Explores some of the underlying social psychological factors of the new black ethic. The movement is seen "as a corrosive operation against those harsh, oppressive elements of the social structure that have either misinterpreted the humanness of black people or

compelled them to believe that psychosocially they had infantile or animal-like motivational systems."—*M. West.*

SEXUAL BEHAVIOR

9810. Gaffuri, Giulio. III **Convegno sul tema: "L'impotenza sessuale": Ascetismo e sessualità: Risultati di una ricerca anamnestico-clinica.** [3rd annual convention on the subject: "Sexual impotence": Asceticism and sexuality: Results of an anamnestic-clinical study.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 320-323.—Recorded the results of a study, begun in 1949, to correlate the intensity of the ascetic-mystical way of life and subjective sexual situations. Interest in such a study came about from having found among the ascetics such harmony and fulfillment that Eros was partially or totally forgotten and masculinity maintained. 1780 questionnaires concerning personal sexual activity were studied as well as 432 30-50 yr. olds who were observed through objective clinical examinations and through interviews. Ss were divided into 4 groups: (a) in Ss that lived an ascetic-mystical life exclusively, the correlation between interior situations and erotic-sexual situations was 100% and tightly interrelated; (b) in Ss who lived an intense ascetic-mystical life the correlation was 97%; (c) in Ss who lived a common ascetic-mystical life the correlation was 95%; and (d) in Ss who lived a superficial ascetic-mystical life, there was 89% correlation. It is concluded that ascetic-mystical life is good for those Ss who live it wholly and aspire for a fuller and more harmonious structuralization of the personality. Sexuality is situated in a religious dimension of ultimate consummation in the process of man's identification with the Being.—*A. M. Farfaglia.*

9811. Mosher, Donald L. & Cross, Herbert J. (U. Connecticut) **Sex guilt and premarital sexual experiences of college students.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 27-32.—Investigated the relationship of sex guilt as a personality disposition to reports of previous sexual experiences, feelings following participation, or reasons for non-participation, and pre- and postmarital sexual standards for 60 male and 76 female undergraduates. Sex guilt was negatively correlated with the level of intimacy of premarital sexual experiences, and guilty Ss had less permissive premarital standards. The more guilty females gave moral beliefs as their reason for not participating in intercourse or more intimate forms of petting; the more guilty males reported that moral beliefs, respect for the girl, and fear of pregnancy or disease were their reasons for nonparticipation in intercourse or oral-genital relations. (15 ref.)—*Journal abstract.*

9812. Nuebeck, Gerhard. (Ed.) (U. Minnesota) **Ex-tramarital relations.** Englewood Cliffs, N.J.: Prentice-Hall, 1969. xii, 205 p. \$5.95(cloth), \$2.45(paper).

9813. Raboch, Jan. **Two studies of male sex impotence.** *Journal of Sex Research*, 1970(Aug), Vol. 6(3), 181-187.—Exp. I found that of 600 males with potency difficulties approximately $\frac{2}{3}$ had difficulty in performing sexual intercourse after having already gone through a period of successful sexual relations. Exp. II examined 2087 males with functional sexual disturbances. Pathological symptoms were correlated with CA. Findings indicate that anxieties about sexual inadequacy occurred most frequently in the subgroups around 20 yr. of age; premature ejaculation, between 26-30 yr.; and

sexual frigidity, between 46-50 yr. The most frequently stated pathological symptom of functional sexual disorders was a disturbance of erectivity which increased with age.—*E. B. Jaffa*.

9816. Spencer, Geraldine. **Pre-marital pregnancies and ex-nuptial births in Australia, 1911-66: A comment.** *Australian & New Zealand Journal of Sociology*, 1969(Oct), Vol. 5(2), 121-127.—Attempts to answer some questions posed by K. G. Basavarajappa (see PA, Vol. 43:12851) on pregnancy and forced marriages, the availability of contraceptives to the unwed, normal pregnancy, and illegitimacy. Compared with 50 yr. ago, there are fewer marriages in which the bride is many mo. pregnant, while confinements 5 and 6 mo. after marriage became more frequent. This may indicate a decrease in the proportion of forced marriages but a maintenance of date-setting pregnancies. The recent improvements in contraceptives are unlikely to have a major effect on extramarital fertility. Much of the variation in premarital fertility results from variations in marriage rates.—*S. R. Diamond*.

9817. Sutker, Patricia & Gilliard, Rickie S. (Tulane U., Medical School) **Personal sexual attitudes and behavior in blacks and whites.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 753-754.—Administered the Sexual Attitude Survey to 79 black and 118 white college students. Sexual attitudes and behavior among black males were found to be significantly more liberal than those of black females, white females, and white males.—*Journal abstract*.

9819. Addis, Barnett. (U. Oklahoma) **Media credibility: An experimental comparison of the effects of film, audio tape and written communications on beliefs in the existence of unusual phenomena.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2491.

9820. Blatt, Stephen J. (Ohio U.) **The consistency between verbal and behavioral attitude responses as a function of high and low controversial social issues.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-B), 1557-1558.

9821. Bostrom, Robert N. (U. Kentucky) **Affective, cognitive, and behavioral dimensions of communicative attitudes.** *Journal of Communication*, 1970(Dec), Vol. 20(4), 359-369.—Tested the hypothesis that affective, cognitive, and behavioral dimensions are separate manifestations of a common mediating process.

Speech attitude tests that measure these separate types of attitude components were compared with behavior exhibited by 63 Ss in speech classes. The affective dimension (the Gilkinson Personal Report of Confidence as a Speaker test) had the strongest relationship to the observed behaviors. Results are best explained in terms of the affective dimension being a manifestation of greater strength of the attitude involved.—*Journal summary*.

9822. Brooks, William D. & Friedrich, Gustav W. (Purdue U.) **Police image: An exploratory study.** *Journal of Communication*, 1970(Dec), Vol. 20(4), 370-374.—Describes interviews used to discover the effect of 4 variables on police image: race, sex, age, and type of communication with policemen. Ss were 85 black and 146 white residents of 3 Indiana towns. White Ss, Ss who reported that their images of police were based on personal contact, and Ss who reported no arrest record had significantly more favorable images of police than their counterparts.—*Journal abstract*.

9823. Eiser, J. R. (U. Bristol, England) **Enhancement of contrast in the absolute judgment of attitude statements.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 1-10.—128 economics students judged 64 statements in terms of their permissiveness or restrictiveness toward the use of drugs. When the 32 most permissive statements were attributed to 1 fictitious newspaper, and the 32 most restrictive to another, judges gave more polarized ratings than when the statements were presented in the absence of newspaper names. It was found that the more permissive a judge's own position, the more polarized and restrictive tended to be his judgments. The ratings given by different groups of judges were highly linearly correlated with each other. An interpretation of the relationship between attitude and polarization of judgment is proposed, which assumes that judges categorize statements according to how much they agree or disagree with them. (19 ref.)—*Journal abstract*.

9830. Sedlacek, William E. & Brooks, Glenwood C. (U. Maryland, Counseling Center) **Measuring racial attitudes in a situational context.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 971-980.—The Situational Attitude Scale (SAS) was developed to measure the attitudes of whites toward blacks. Each of 2 forms contained the same situations, bipolar scales, and instructions, except that the word "black" was inserted into each situation in Form B, and Form A made no reference to race. The SAS was administered to 405 white undergraduates. Forms were distributed randomly and Ss were unaware that 2 forms were administered. The validity of the SAS was determined by the mean response difference between Forms A and B, using *t* tests. 55 of the 100 items were significant beyond the .05 level. Thus, there was strong evidence that the insertion of the word "black" into each situation caused Ss to respond differently. (23 ref.).—*Journal abstract.*

9831. Vertinsky, Ilan. (Northwestern U., School of Management) **The use of aspiration-level behavior models in political science.** *American Behavioral Scientist*, 1969(May), Vol. 12(5), 9-12.—Suggests that aspiration-level models may prove useful in building a mathematical model of political behavior. 2 definitions of aspiration level are identified: (a) as a target outcome, and (b) as a function reconciling the motives to achieve and to avoid failure. Examples are provided to illustrate and analyze the formal characteristics of the model. (17 ref.).—*M. West.*

Formation & Change

9833. Allen, Ben P. (Western Illinois U.) **Demonstrations in attitude change and persuasive communication.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 703-706.—Obtained 17 statements representing 17 positions favored (positive) by 119 college students. To demonstrate that Ss with extreme positions are resistant to change, communications opposing the 2 most positive statements were presented to 40 Ss. To demonstrate that moderately held positions are likely to change in the same direction, communications supporting the 2 least positive statements were presented to 40 other Ss. The replication was performed by presenting Ss with a 2-sided communication concerning a statement which was a priori in between most and least positive. Although some exceptions were noted, the replication and demonstrations were successful.—*Journal abstract.*

9834. March, Brian A. (U. Maryland) **Credibility, sequence, volition, and discrepancy as determinants of attitude, change in a forced-compliance situation.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2497-2498.

9835. Silverman, Irwin. (U. Florida) **On the resolution and tolerance of cognitive inconsistency in a natural-occurring event: Attitudes and beliefs following the Senator Edward M. Kennedy Incident.** *Journal of Personality & Social Psychology*, 1971(Feb), Vol. 17(2), 171-178.—Reports data obtained from a 12-item questionnaire relating beliefs about the event in which Senator Edward M. Kennedy delayed approximately 10 hr. in reporting an automobile accident involving a fatality and attitude change toward the Senator. For the major portion of the items, evidence of consistency was found between attitude change and beliefs; however, a sizable percentage of respondents who maintained high attitudes toward Kennedy held seemingly morally incriminating beliefs about his motives and behavior. 35 faculty members, 57 graduate students, 8 undergraduates, and 2 lab technicians served as Ss. Various speculations from the data are offered regarding the reasoning processes and value systems of Ss manifesting this apparent tolerance for inconsistency. (15 ref.).—*Journal abstract.*

Influence & Behavior

9836. Elser, J. R. (U. Bristol, England) **Comment on Ward's "Attitude and involvement in the absolute judgment of attitude statements."** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 81-83.—Criticizes C. D. Ward's finding (see PA, Vol. 41:521) that the effect of judges' attitudes on the judgment of attitude statements is unaffected by the scale positions of the items. This finding is interpreted as partly resulting from Ward's exclusion of Ss for apparent confusion of the ends of the scale, and inconsistent with previous research.—*Journal abstract.*

9837. Robinson, Robert W. (Temple U.) **Attitudinal and behavioral effects of initial, attitude, task orientation, and presentation of aversive stimuli.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3874.

9853. Modigliani, Andre. (Harvard U.) **Embarrassment, facework, and eye contact: Testing a theory of embarrassment.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 15-24.—Derived 4 hypotheses from a theoretical framework which views embarrassment as a feeling of inadequacy precipitated by the belief that one's presented self appears deficient to others: (a) embarrassment can occur only in the presence of others; (b) it can be attenuated by a knowledge that one's demeanor is not as deficient as it appears to others; (c) it is associated with decreased eye contact; and (d) it is associated with efforts to improve one's presented self through facework. These hypotheses were tested via an experimental design that caused Ss either to succeed or to fail, in public or private, on their portion of a group task. 92 male undergraduates served as Ss. Results generally support Hypothesis 1, but indicate that a mild form of private embarrassment can occur in the anticipated presence of others. Hypothesis 2 could not be tested due to a partial failure of the experimental manipulations, although this failure, itself, has implications for the viability of the hypothesis. Hypothesis 3 received apparent support, but further analysis suggests that embarrassed Ss reduced their eye contact with another group member primarily because they resented his criticism of their poor performance. Hypothesis 4 is clearly supported. (19 ref.)—*Journal abstract.*

9854. Pinderhughes, Charles A. (Tufts U., Medical School, Boston, Mass.) **The universal resolution of ambivalence by paranoia with an example in black and white.** *American Journal of Psychotherapy*, 1970(Oct), Vol. 24(4), 597-610.—Employs "the concept of group-related paranoias in an attempt to explain the phenomena observed in racial and other social conflicts." Conflict and ambivalence decline as an individual accepts 1 group or 1 side of an issue and rejects others. Though these are nonpathological paranoid processes

which can act to stabilize relations among persons, the increase in conformity of thinking can be a source of considerable conflict, misunderstanding, and violence.—*W. Vernon.*

9863. Tebbutt, Arthur V. **Written interchanges: A proposal for interpersonal growth.** *Journal of Communication*, 1970(Dec), Vol. 20(4), 351-358.—Illustrates the lack of critical feedback among people. The interchange of written interpersonal messages is suggested to fulfill this need. The sender receives his motivation from the hope of honest feedback from others and courage from the assurance of anonymity. Examples are offered of how messages might be structured, field testing of the process is recounted, coordinator roles are explored, and benefit of the written interchanges are compared with probable costs.—*P. J. Federman.*

9864. Weick, Karl E. & Gilfillan, David P. (U. Minnesota, Coll. of Liberal Arts, Lab. for Research in Social Relations) **Fate of arbitrary traditions in a laboratory microculture.** *Journal of Personality & Social Psychology*, 1971(Feb), Vol. 17(2), 179-191.—Investigates the cultural transmission of warranted and unwarranted arbitrary traditions. Ss were 172 male undergraduates. 3-man groups played the common target game, using 2 different strategies imposed by the E. After they finished, 1 S was removed, and a new S not instructed in the strategy, added. This process was continued for 11 generations, each S participating 3 times before removal. The cultures that had an arbitrarily chosen easy strategy embedded in the 1st generation perpetuated this strategy for 11 generations. Groups given an arbitrary, equally functional but more difficult strategy abandoned it by the 4th generation and then adopted a variety of less difficult ones. Results demonstrate that arbitrary tra-

ditions do not disappear invariably, as previous research seems to indicate. When the arbitrary tradition is warranted arbitrary, it will be perpetuated; when arbitrariness is unwarranted, compliance with the tradition will decrease.—*Journal abstract.*

Oklahoma) **Race, sex, and sympathetic helping behavior: The broken bag caper.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 59-65.—To determine interaction of race, sex, and helping behavior, 176 Negro and white 20-60 yr. old males and females chose whether or not to help a young Negro or white female accomplice whose bag of groceries had just broken in front of a supermarket. Results show that: (a) significant sex differences occurred in helping behavior for the Negro but not the white sample. (b) Women tended to be less helpful toward women of the same race. (c) With the exception of b, there were no racial differences in helping behavior. (d) A significant number of shoppers who saw examples of negative modeling helped anyway; and in this the sex of the model was the most important characteristic.—*Journal abstract.*

Influence & Communication

9869. Breed, George R. (U. Florida) **Nonverbal communication and interpersonal attraction in dyads.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1369.

9870. Crowther, Betty & Pantleo, Paul. (U. Southern Illinois) **Measurement of group interaction rate.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 707-712.—Examined 7 indices in order to identify the similarities and differences among different measures of group interaction rate. Inspection of the indices illustrates that the findings differ as a function of the measure used, and conclusions drawn on the basis of only 1 may be completely reversed by the other. 2 variables, a psychological Gestalt and a measure of the actual amount of overt behavior displayed, were identified as dimensions in measures of interaction rate.—*Journal abstract.*

9871. Dabbs, James M. (Georgia State U.) **A view of Levonian's remarks on studies of self-esteem and persuasibility.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 854.—Discusses confusion in some of E. Levonian's criticism of research on self-esteem and persuasibility. He criticizes 1 study based on a difference between diagonal cells in a 2 x 2 design, a contrast which confounds differences in 2 factors and is therefore hardly meaningful. He also makes the unjustified suggestion that researchers in this area reject interpretations of the data which conflict with their own hypotheses.—*Author abstract.*

9872. Faley, Thomas & Tedeschi, James T. (United States Military Academy) **Status and reactions to threats.** *Journal of Personality & Social Psychology*, 1971(Feb), Vol. 17(2), 192-199.—Studied the status positions of both source and target in a conflict situation in which the source uses threats as a means of coercing the target's compliance. The Prisoner's Dilemma game was modified to permit sending an occasional threat from a simulated source to target Ss. 120 ROTC cadets of varying ranks (status) assumed the position of targets and allegedly played other cadets. 4 source-target conditions were used: low-high, high-low, low-low, and high-high. The source's threats were 10, 50, or 90% credible and carried either high or low punishment for noncompliance. The major findings of this study were: (a) target Ss, irrespective of own status, complied more often to the threats of a high-status source than to threats issued by a low-status source; (b) as credibility of threats increased, the degree of compliance obtained increased; (c) as punishment magnitude associated with threats increased, compliance increased; (d) high-status Ss exploited the low-status simulated player more often in the game than did Ss in the other 3 status conditions; and (e) the perceived potency of the threatener was directly related to the credibility of his threats. 9878. Jaffee, Cabot L. & Whitacre, Robert. (U. Tennessee) **An unobtrusive measure of prejudice toward Negroes under differing durations of speech.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 823-828.

—Investigated the relationship between the voting behavior of naive white Ss toward a Negro or white individual in a small group discussion when the Negro or white individual talked more than anyone else in the group or did not speak. 64 white female undergraduates were divided into 32 groups engaging in 1 of 2 experimental conditions. 1 condition consisted of 2 Ss and 1 Negro confederate (unknown to Ss); the other contained groups of 2 Ss and 1 white confederate (also unknown to Ss). They solved 20 relatively unstructured concept-formation problems, discussed their solutions, and then voted for the person who they thought had the most insight into the problem. 32 other female undergraduates served in a control condition in which 16

groups, consisting of 2 Ss and a Negro confederate each, solved concept-formation problems; but no talking was permitted. Results show that, in the silent control condition, there was no significant difference in Ss' voting behavior where each S voted between the Negro confederate and the white S. In the high-talk experimental condition, however, the Negro confederates received significantly fewer votes than did the white confederates. It is concluded that the number of votes obtained by an individual depends, to a large extent, on that individual's race when engaged in high verbal interaction but not when engaged in a nonspeaking situation.—*Journal abstract.*

Smelser.] *Rassegna Italiana di Sociologia*, 1970(Apr), Vol. 1(2), 231-259.—Reviews the most important aspects of Smelser's theory of collective behavior, especially "crazes" and the fashion cycle. There are 4 fundamental types of crazes: (a) the speculative boom regarding the economic sphere; (b) the political bandwagon; (c) fashion and hobbies in the expressive sphere; and (d) religious revivals. A condition favorable to the fashion cycle is a social system strongly differentiated by symbolization of status. Every fashion cycle is born from a structural tension. The tensions which lead to "crazes" come from ambiguities which concern the uncertainties of the actual uses of resources, of possible future destination with the existence of the means to confront such uncertain conditions. The differences between the innovators and the imitators in the fashion cycle are distinguished. "Imitators" applies to those who aspire to a more elevated level. The innovators are "inside"; the imitators, "outside." This presents the essence of hostility in the fashion cycle: the recurrent replacement of habits by the innovators. It is concluded that the fashion cycle comes from "the top" in advanced industrial societies, generically defined as "mass societies."—*A. M. Farfaglia.*

9893. Lecker, Sidney & Pigott, William. (Montreal Children's Hosp., Mental Assessment & Guidance Clinic, Quebec, Canada) **Coping with drug abuse: I. A community social action approach.** *Canada's Mental Health*, 1970, Suppl. No. 64, 1-7.—Found the establishment of a Social Action Committee in a suburban middle-class community to be a potent means for influencing community action and attitudes towards drug abuse, and the alienation of youth. Proposals for the initiation of action were carried directly to the community rather than through elected officials. All efforts undertaken by the committee and the community, were attempts at making the community a place for growth and development, and at reducing the alienation of all age groups. This goal was achieved through facilitating dialogue at several levels: between young people and their parents, between institutions and ordinary citizens, and among institutions themselves. It is felt that curative measures for drug abuse would have to be as numerous as the causes motivating an individual to the abuse of drugs. Ameliorating factors introduced were the new avenues for dialogue between individuals, and the means of effective community participation of young people and previously motivated but uninvolved adults.—*Journal summary*.

9894. McGinley, Hugh; McGinley, Pat, & Shames, Morris. (U. Wyoming) **Failure to find experimenter-expectancy effects in IQ estimations.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 831-834.—128 Ss were given the task of estimating the IQs of 10 women whose photographs they viewed. 4 Es were assigned to each of 4 conditions, 3 of which were of expectancy inducement and 1 of which was of no-expectancy inducement. No expectancy effects were observed. (15 ref.)—*Journal abstract*.

9895. Miller, Howard L. & Rivenbark, W. H. (U. Alabama) **Sexual differences in physical attractiveness as a determinant of heterosexual liking.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 701-702.—A questionnaire study of sexual differences in the importance of physical attractiveness to heterosexual liking disclosed that 177 men ranked physical attractiveness significantly (but only slightly $p < .001$) higher than 177 women. Different degrees of intimacy and permanency in the relationship also affected the importance of physical attractiveness in partners. There was no significant interaction between sex and type of relationship.—*Journal abstract*.

9896. Sisley, Emily L. (Long Island U., Brooklyn, N.Y.) **The breakdown of the American image: Comparison of stereotypes held by college students over four decades.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 779-786.—The same list of 84 adjectives used by college students to assign traits to Americans in 1932 by D. Katz and K. Braly, and in 1950 by G. M. Gilbert was used again in 1970. Striking differences in willingness to stereotype are noted, and the other-contradictory traits chosen by Ss generally changed in a "negative" direction from those of earlier studies. Findings on 100 white undergraduates support the

general notion that today's youth view their country and its people very differently from Ss tested a few decades ago. This suggests the need for new approaches to education, and has methodological implications for research design in studies of social attitudes.—*Journal abstract.*

9897. Walker, David N. & Mosher, Donald L. (U. Connecticut) **Altruism in college women.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 887-894.—Used sociometric ratings by sorority women to nominate women who were altruistic and nonaltruistic. Evidence for convergent validity was found through high correlations between sociometric altruism and sociometric friendliness and trust, while evidence for discriminant validity was inferred when sociometric altruism was unrelated to sociometric independence and physical attractiveness. The top and bottom 20% of the 207 Ss were individually interviewed. The Ss responded to 5 altruism situations and to questions in 12 relevant areas. Sociometric altruism was strongly correlated with interview altruism measures. However, the responses of the altruistic Ss in the interview did not correspond completely to the ideal-type definition of altruism used in the nominating procedure. Rather than being motivated to help another through intrinsic satisfaction experienced when aiding another, the altruistic Ss appeared to be motivated by conceptions of reciprocity and mutuality in friendly interpersonal relations. Less altruistic Ss were more concerned with a contractual reciprocity. (15 ref.)—*Journal abstract.*

9898. Whitney, Richard E. (U. California, Los Angeles) **Agreement and positivity in pleasantness ratings of balanced and unbalanced social situations: A cross-cultural study.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 11-14.—A 2 × 2 factorial experiment tested the relative importance of interpersonal agreement, positivity, and balance in determining a judge's pleasantness ratings of various social situations. Positivity refers to both positive interpersonal relations, as in "P and O are friends," and positive orientations toward objects and events, as in "P likes X." Chinese undergraduates read about and rated the pleasantness of 8 different social situations constructed from balance theory propositions. Results indicate that the main determinants of pleasantness are interpersonal agreement and positivity. The Agreement × Positivity interaction was not significant, indicating that balance did not affect the subject's pleasantness ratings.—*Journal abstract.*

COMMUNICATION

9899. Blankenburg, William B. (U. Wisconsin) **News accuracy: Some findings on the meaning of errors.** *Journal of Communication*, 1970(Dec), Vol. 20(4), 375-386.—Reviewed over 300 local news stories from 2 dailies for accuracy by persons who had been reported on. Results indicate that an ongoing close acquaintanceship between the newsmaker and someone on the news staff resulted in fewer errors. Close acquaintanceship also appeared to ameliorate the impact of errors, and caused them to be judged as less serious. Subjective and objective errors did not appear distinguishable by their seriousness. Respondents who perceived errors did not exhibit a significantly lower opinion of the newspaper than those who saw none.—*Journal abstract.*

9900. Collins, Thomas B. & Batzle, Paul. (Mankato

State Coll.) **Method of increasing graffiti responses.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 733-734.—Examined the effect of availability of writing materials on the output of graffiti in 2 men's washrooms of a college library. The frequency of graffiti did not change following posting of a sign prohibiting writing on the walls. After blackboards were installed, the numbers of graffiti increased significantly. It was hypothesized that the ease of making a graffiti response is a controlling variable and that the reported method will produce a large number of responses. Data do not support the idea that graffiti reflect important social issues. Results indicate that graffiti are amenable to experimental manipulation. The use of stimulus graffiti is suggested.—*Journal abstract.*

9901. Godfrey, R. Richard & Natalicio, Luiz F. (U. Texas) **Evaluation on semantic differential equals abstraction plus error.** *Psychological Reports*, 1970(Oct), Vol. 27(2), 467-473.—Tested for a possible relation between the concreteness of stimuli and their loadings on the Evaluation dimension in the semantic differential (SD). 20 undergraduates were given 26 adjective pairs having the highest and lowest loadings on Evaluation in the Osgood, Suci, and Tannenbaum studies, and rated a series of stimuli: 3 objects, 3 pictures, and 6 words. The ratios of the variance of the ratings of the adjective pairs with the highest loading on Evaluation to the variance of ratings of pairs with the lowest loading on Evaluation for each of the stimuli were compared with Ss' rankings of the same stimuli on an abstraction-concreteness continuum. The r was .645 ($p < .05$ for 10 degrees of freedom); a 2nd study yielded a comparable value. When variance due to individual differences in abstraction rankings was removed, the obtained r rose to .953 ($p < .001$ for 10 degrees of freedom). It is concluded that Paivio (see PA, Vol. 43:10753) and Osgood are probably measuring the same phenomenon and calling it by different names. Implications for methodology and SD-based semantic structure theory are drawn.—*Journal abstract.*

Language

9903. Barik, Henri C. (U. North Carolina, Chapel Hill) **A study of simultaneous interpretation.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3883-3884.

9904. Bruce, Beverlee. (U. California, Los Angeles) **The social and psychological implications of language changing.** *American Behavioral Scientist*, 1969(Mar), Vol. 12(4), 34-37.—Discusses problems and challenges associated with conversion from Negro dialect to Standard English by Negroes living in low socioeconomic ghetto settings. Suggestions are provided for practical steps to facilitate such a change. It is concluded that Negro children can be motivated for such a change, which can "serve as a means of learning about one's self and later... as a tool for dealing with the larger community."—*M. West.*

9905. Daves, Walter F. (Georgia State U.) **Absence of a context effect in rated pleasantness of concrete and abstract words.** *Perceptual & Motor Skills*,

1970(Dec), Vol. 31(3), 688.—Investigated whether the judged pleasantness of neutral words would differ when they were embedded in a context of unpleasant, neutral, or pleasant words, and whether any obtained effect depended upon the abstractness or concreteness of the words. 15 Ss rated 20 words. Analysis of variance of the test words provided no evidence for a context effect. Analysis of the context words yielded a significant interaction between pleasantness and concreteness due to the concrete words being judged less extremely than the abstract words. Explanations for the differences in results between this study and previous research are discussed.—S. Knapp.

9906. Enard, Claude. *Analyse et aménagement d'un langage technique: "Chronique" d'un avion pour le contrôleur de la navigation aérienne.* [Analysis and management of a technical language: "Reports" of an aircraft for control of aerial navigation.] *Bulletin du Centre d'Etudes et Recherches Psychotechniques*, 1968(Jul), Vol. 17(3), 171-190.—A general analysis of a technical language based on the technical language of users. Describes a linguistic model for use in aircraft navigation and air traffic control. Methodology for assessment of user's needs, modifications of construction of a language, standardization of code, and reduction of syntactic combinations are discussed. (English summary)—B. A. Stanton.

9907. Martin, James G. (U. Maryland) *Rhythm-induced judgments of word stress in sentences.* *Journal of Verbal Learning & Verbal Behavior*, 1970(Dec), Vol. 9(6), 627-633.—Suggests that the successive sounds of speech have a hierarchical structure that is rhythmic, and that the hierarchical structure is revealed by the rhythmic patterning of the prosodic features in speech, e.g., stress. Some rules for characterizing relative duration and stress are discussed. 94 Ss heard 2 versions of sentences and judged relative stress on the last 2 words. Sentence versions were copies differing only in rhythmic structure determined by a tape-spliced interval. Judged words were thus acoustically identical in the 2 versions. Stress judgments varied as predicted by rhythmic structure. Discussion concerns music and speech rhythms, the potential relation between rhythmic structure and the transformational cycle, and the perceptual reality of stress.—*Journal abstract.*

9908. Zoh, Myeong-Han. (Seoul National U., Korea) *Repetitions of associations as a function of relative distance between successive associates.* *Psychological Reports*, 1970(Dec), Vol. 27(3), 683-686. Studies a hierarchical characteristic of associative strength with an associative factor of relative distance (RD) measured as distance from a primary associate to the secondary as referred to communality. Different stimulus lists varied RD by making the communality of primaries homogeneous and varying that of secondaries. The method of independent repetitions for successive trials of presentation of a stimulus was adopted, and the repetitive probability of associations and the latencies were measured in 35 Ss. The RD directly reflected repetitions of associations, while among the lists of corresponding RD there was no difference in latency.—*Journal abstract.*

Psycholinguistics

9909. Blumenthal, Arthur L. (Harvard U.) *Language*

and psychology: *Historical aspects of psycholinguistics.* New York, N.Y.: John Wiley, 1970. x, 248 p. \$7.95(cloth), \$4.95(paper).

9910. Kasschau, Richard A. & Cilluffo, Anthony F. (U. South Carolina) *Effects of concurrent activity on semantic satiation: An extension.* *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 69-73.—60 undergraduates repeated each of 6 words for 30 sec., accompanied by 1 of 3 actions (a no-action control or an action concordant or discordant to the repeated word's meaning), as the S looked or did not look at the accompanying action. Satiation (loss) of meaning resulted from discordant actions, generation from concordant actions, and no change with no action. The amount-of-meaning change varied as a function of which semantic differential scale was used, but not as a function of looking or not looking. It is concluded that peripheral activity can influence a word's meaning.—*Journal abstract.*

9911. Miller, George A. (Rockefeller U.) *Four philosophical problems of psycholinguists.* *Philosophy of Science*, 1970(Jun), Vol. 37(2), 183-199.—Discusses 4 philosophical problems—predication, speech acts, rules, and innate ideas—concerning their implications for psychological and linguistic research. The discussion of predication concerns both form and use. With respect to form, it is argued that lexical memory is organized according to a predicate-argument formula that underlies the subject-predicate form of sentences. With respect to use, it is argued that the illocutionary force of the sentence as a speech act must be considered. Both the formation and the use of such verbal constructions are normally characterized by systems of rules, but there is no clear account of what a rule is or how it might operate to control behavior, and this problem is especially difficult when, as in language, the person's knowledge of rules is implicit. The innate basis for human ability to acquire linguistic rules is considered, and the problem of innateness is redefined around the conjecture that there are innate, language-specific mechanisms unique to human beings. The problem of investigating such language-specific mechanisms psychologically, however, is quite difficult at the present time. (15 ref.)—*Journal abstract.*

9912. Simison, Diane L. (Indiana U.) *The relation between the grammatical and psychological complexity of some English sentences.* *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1632.

9913. Slama-Cazacu, Tatiana. (U. Bucharest, Romania) *Code levels, interdisciplinary approach, and the object of psycholinguistics.* *Revue Roumaine des Sciences Sociales-Série de Psychologie*, 1970, Vol. 14(1), 87-96.—Discusses the object of psycholinguistics (PL) and the communication act such as it occurs in real life and about its components on the levels of the code. Steps in which a language can be coded and decoded for communicative purposes are described. It is noted that each individual is a linguistic system in himself, starting with childhood when he was a selective echo through adulthood when his linguistic capabilities expand to the fullest. It is postulated that a human being is something of an emitter in the fact that any message is inseparable from the person who produced it. The conclusion is made that linguistics have not yet reached total suppleness and fitness, but the PL aims especially at uncovering the relationship between the aspect of the messages and their psychical causes.—J. Sirotn.

AESTHETICS

9914. Bernard, Y. (Inst. of Esthetics & Art Sciences, Paris, France) **Construction d'un test de connaissance en peinture.** [The construction of a test to assess familiarity with paintings.] *International Review of Applied Psychology*, 1970(Oct), Vol. 19(2), 125-131.—A test designed to assess familiarity with paintings, consisting of 12 items, was constructed by taking 2 variables into account: the degree of difficulty, and the possibility of isolating 2 different cultures—1 concerning French paintings, the other with foreign paintings. The task consisted of identifying the pictures and classing them in order of preference. The sample consisted of 480 Ss, customers of a gallery selling reproductions of paintings. The cultural level was high—58% held a BA or higher degree. A factor analysis made it possible to isolate the structure of each group with reference to its relationship with the other group of individuals and group of paintings. Results indicate that the effect of educational level is very slight except for the fact of the superiority of the Ss who were well-educated but who came from a poor cultural background. An almost linear relationship was found between level of knowledge and the originality of the pictures chosen. Furthermore, the results provide a basis for modification of the tests and analysis of sociological variables likely to influence the level of pictorial knowledge.—L. A. Ostlund.

9915. Lefcowitz, Barbara F. (7803 Custer Rd., Bethesda, Md.) **The hybris of neurosis: Malamud's "Pictures of Fidelman."** *Literature & Psychology*, 1970, Vol. 20(3), 115-120.—Discusses Bernard Malamud's use of a neurotic character (Fidelman) in *Pictures of Fidelman*. Fidelman is depicted as an obsessive-compulsive neurotic who lacks any genuine human involvement. The character is described as depicting sadomasochism, hysteria, obsession with fastidiousness, and as having delusions of intellectual and creative grandeur.—B. A. Stanton.

9916. Stoll, John E. (Ball State U.) **Psychological dissociation in the Victorian novel.** *Literature & Psychology*, 1970, Vol. 20(2), 63-73.—Defines psychological dissociation in a novel as the gap between the author's intention and that effect which the author achieves. It is suggested that "Inherited in great part from the 18th century separation of intellect and feeling, judgment and fancy, sense and sensibility, psychological duality is a distinctive characteristic of the 19th century as a whole, affects all forms of literature, and should not be confined, to the American or British novel alone." Literary description of the dissociative process is traced from its beginnings with Jane Austen (*Emma*) through D. H. Lawrence (*Sons and Lovers*).—B. A. Stanton.

SMOKING & DRUG & ALCOHOL USE

9917. ———. **The drug abuse problem cries for a focused, single agency.** *California's Health*, 1968(Feb), Vol. 25(8), 17-18, 21.—Suggests a coordinated health program based on (a) epidemiological studies, (b) health educational materials, (c) professional education, (d) treatment and rehabilitation programs, (e) broader research activities, and (f) a review of existing legislation and enforcement policies to supplement law enforcement in the problems of drug abuse.—J. Canady.

nosis. Chicago, Ill.: Aldine, 1970. xi, 337 p. \$8.95.

9919. Janis, Irving L. & Hoffman, David. (Yale U.) **Facilitating effects of daily contact between partners who make a decision to cut down on smoking.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 25-35.—Conducted a field experiment in a smoking clinic with 30 adults who volunteered to attend 5 weekly meetings with a consultant. Pairs of Ss were assigned to 1 of 3 equivalent experimental groups; high-contact partners, who phoned each other daily; low-contact partners, who spoke with each other only at clinic meetings; and controls, who had a different partner at each meeting. At the last clinic session, the high-contact Ss showed more positive effects than the other 2 groups on measures indicating that they developed (a) more unfavorable attitudes toward smoking ($p < .01$), (b) more favorable attitudes toward the clinic ($p < .05$) and toward the partner ($p < .05$), and (c) fewer withdrawal symptoms of anxiety after cutting down on smoking ($p < .05$). Follow-up interviews indicate that during the subsequent year the high-contact Ss continued to smoke fewer cigarettes ($p < .01$) than Ss in the other 2 groups, almost all of whom reverted to their former smoking habits. The high-contact Ss reported, however, that they had discontinued contacting each other by 4 wk. after the final clinic session. Alternative explanatory hypotheses were assessed by taking account of supplementary observations, including a content analysis of the Ss' conversations during meetings. The most plausible mediating factor appears to be the increase in interpersonal attraction produced by daily contact, which makes for increased valuation of the clinic group and internalization of the norms conveyed by the consultant leader.—*Journal abstract.*

9920. Leake, Chauncey D. (U. California, Medical Center, San Francisco) **Mood, behavior, and drugs: AAAS symposium 27-28 December 1970, Chicago.** *Science*, 1970(Oct), Vol. 170(3957), 559-560.—Provides a summary of psychological and pharmacological factors involved in the use and misuse of drugs which act on the CNS. Evidence suggests that activity of cell centers in the limbic system and hypothalamic areas of the brainstem determines, in part, the mood and behavior resulting from the taking of drugs. It is noted that the living material of the human body with which the drug interacts, plays a significant role in drug effects. There is also wide variation in drug effects from person to person and with repeated administrations compared to a single dose. The 3 major types of CNS drugs, those which stimulate, depress, and distort the activity of the brain, are briefly reviewed.—P. McMillan.

9923. Robinson, Lisa. (U. Maryland) **Marihuana use in high school girls: A psycho-social case study.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2196.

9924. Smith, David E. & Meyers, Frederick M. (U. California, School of Medicine, San Francisco) **The new generation and the new drugs.** *California's Health*, 1968(Feb), Vol. 25(8), 7-11, 15.—Comments on the legal

or illegal use by youth of drugs which are grouped into medical and social categories. 3 major syndromes of drug abuse are discussed: (a) sedative, (b) narcotic, and (c) CNS stimulant. The most commonly abused drugs of each syndrome are ethyl alcohol, heroin, and methamphetamine. The place of marihuana in the drug spectrum is questioned, and it is suggested that the abuse potential of marihuana is like that of alcohol. It is concluded that unless "drug abuse in the younger generation is recognized and treated as a medical and sociological problem, we will continue to witness the specter of increasing drug-induced physical and mental illness in the next generation."—*J. Canady.*

9925. Wentworth-Rohr, Ivan. (Pace Coll.) **Marijuana flashback: A clinical note.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 236-237. —Describes 2 cases of marihuana flashback: in a 30-yr-old single male college graduate and in a male undergraduate. Unlike the Ss in the study by M. H. Keeler, C. B. Reifler, and M. B. Liptzen (see PA, Vol. 43:874) who suffered a persistence of disturbance, these Ss had been free of drug-related symptoms for 3-4 wk.—*S. Knapp.*

PERSONALITY

9926. Black, Kenneth. (Georgia State Coll.) **Security and individual identity.** *Journal of the American Society of Chartered Life Underwriters*, 1969(Jul), Vol. 23(3), 58-61. —Suggests that individual life and health insurance can play an essential role in meeting basic economic needs, and can free energies for development of higher needs as in A. H. Maslow's theory of motivation.—*M. West.*

9927. Carlson, Rae. (National Inst. of Mental Health, Chevy Chase, Md.) **Where is the person in personality research?** *Psychological Bulletin*, 1971(Mar), Vol. 75(3), 203-219. —Examined constraints upon inquiry in personality imposed by current research methods by (a) a survey of empirical work published in 2 major personality journals, and (b) a consideration of methodological and ethical issues raised in recent research criticism. Review of samples, research procedures, and social-psychological context in 226 empirical studies revealed that current methodological practices are incapable of approaching questions of real importance in personality and involve serious problems beyond those noted in recent research criticism. College students were used as Ss in 71% of the studies. Males and females were represented in a 2:1 ratio; 78% were experimental; 78% were limited to a single session; and 57% used deception to manipulate variables. A conceptual schema for ordering personality research strategies, a distinction between contractual and collaborative models of S-E relationships, and suggestions for increasing the relevance and responsibility of personality research are proposed. (65 ref.)—*Journal abstract.*

9935. Bone, Ronald N., Nelson, Arnold E., & McAllister, D. S. (West Virginia Wesleyan Coll.) **Dream recall and repression-sensitization.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 766. —Correlated dream recall estimates and scores from D. Byrne's (see PA, Vol. 37:3290) Repression-Sensitization scale to test the hypothesis that dream recall would be greater for sensitizers. The resulting correlation was nonsignificant ($r = -.012$) as were separate correlations for 244 males ($r = -.011$) and 253 females ($r = -.019$). Assuming acceptable validity of the Repression-Sensitization scale, dream recall does not seem to be related to repression-sensitization as measured.—*Author abstract.*

9936. Botwinick, Jack. (Washington U.) **Age differences in self-ratings of confidence.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 865-866. —Tested the hypothesis of decreased self-confidence in later life by comparing self-ratings of 18 elderly and 40 young adult Ss with 2 questionnaires. When specific information was involved, old and young were similar with respect to confidence in the correctness of response. When judgments about oneself were involved, the older Ss indicated more self-confidence than the young. The relation between age and confidence is considered to be a matter of context.—*Journal abstract.*

9937. Chance, June E. & Goldstein, Alvin G. (U. Missouri) **Internal-external control of reinforcement and embedded-figures performance.** *Perception & Psychophysics*, 1971(Jan), Vol. 9(1-A), 33-34. —Tested 29 male and 26 female undergraduates in an extended series of 68 embedded figures. Rate of decrease in discovery time was related to Ss' attitudes about locus of control of reinforcing outcomes. Results confirm those of an earlier study, showing that practice dissipated sex-related performance differences observable in early trials. (17 ref.)—*Journal abstract.*

9938. Cooper, Lowell. (Mt. Zion Hosp., Medical Center, San Francisco, Calif.) **Empathy: A developmental model.** *Journal of Nervous & Mental Disease*, 1970(Sep), Vol. 151(3), 169-178. —Attempts to integrate the theoretical literature in the area of empathy into a developmental model, i.e., seeing empathy as intricately related to other cognitive and affective functions evolved in the course of psychological development. Psychoanalytic notions are summarized and an attempt is made to make the developmental scheme of analytic theory more explicit. The analytic framework is used as the

basis for integration of the wide variety of theoretical positions. Major conceptions of empathy as seen by Gestaltists and social learning theorists are discussed as they describe the empathic process at different levels of psychological development. This model is applied to the empirical work in the area with the hope of promoting a clearer theoretical formulation. (35 ref.)—*Journal abstract.*

9939. Das Gupta, J. C. **Aggression.** *Samiksa*, 1968, Vol. 22(4), 119-159.—Administered Calcutta Inventories C (measuring self-aggression—S-A) and D (measuring object-aggression—O-A) to over 1500 Ss in Calcutta and Stanford, California. S-A scores were generally higher for adults than adolescents, lowest in the 30-39 age groups in Indians and in the 20-29 age group of American women. Unmarried Indian women 20-29 showed significantly higher S-A than 12-14 yr. old adolescent girls. Sex-wise, Indian female adults and adolescents showed greater S-A than males, but no such difference was noted in the American sample, with little difference between Indian and American adults. Indian orphans of both sexes had significantly higher S-A scores than adolescents from normal homes. In O-A a steady increase occurred from the 12-14 age groups to the 40s, though none of the mean differences between the different age ranges of females was statistically significant. Generally, American men showed more aggression than Indian men, and American women more than Indian women; Americans display significantly greater O-A than Indians. Little correlation of aggression with parental love received during childhood was noted. A significant positive correlation was seen between S-A and O-A in 79% of the men, and 71% of the women; a high positive correlation between S-A and O-A and parental aggression; a negative correlation between both S-A and O-A and happiness; a high positive correlation of S-A and O-A with neuroticism. A psychodynamic hypothesis is offered to explain the high positive correlation of S-A and O-A.—*T. N. Webster.*

9940. Duvall, Nancy S. (U. North Carolina, Chapel Hill) **Field articulation and the repression-sensitization in perception and memory.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3864.

9949. Masterson, Michael L. (U. Nevada, Psychological Service Center) **Family structure variables and need approval.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 12-13.—Administered the Marlowe-Crowne Social Desirability Scale to 155 undergraduates to determine the importance of family size, ordinal position, and sex to the need for approval (n App). Mean n App increased with an increase in family size, females were higher in n App, and ordinal position was not significantly ($p = .53$) related to n App. It is concluded that "while family size and sex themselves do not interact with one another, both interact with ordinal position in accounting for differences in n App motivation."—*S. Knapp.*

9950. Motta, E. (Provincial Psychiatric Hosp. "L. Mandalari", Messina, Italy) **Formazione nevrotica della personalità e potere di contenimento nelle neurosi in rapporto a particolari fattori della attualità sociale.** [Neurotic formation of the personality and the power of retention in neurosis in relationship to particular factors in present society.] *Acta Neurologica*, 1970(May), Vol. 25(3), 362-371.—The personality of normal Ss who have a psychosomatic inclination in an antineurotic sense can acquire neurotic forms because of different factors: (a) contact on the part of neurotic Ss, (b) neurotic imposition on the part of the family and environment, (c) neurotic conditioning, (d) circumstances which occur by chance, and (e) acquisition of a neurotic mentality by which the S learns to release certain expressions of his personality (somatic disturbances, frustrations, etc.) as would a neurotic. Neurotic impulses can be retained to the extent that the personality does not show any neurotic type of manifestation. In addition to individual factors of retention (physical health, education, social satisfaction), environmental factors can provide a near normal adapting situation. But a significant social aspect lies in the fact that the environment also possesses factors which modify the retention powers of the neurotic in a negative sense, e.g., decrease in family and scholastic severity, an

understanding attitude regarding neurotic Ss in all areas of society. It is concluded that an understanding, tolerant role, especially in institutions is decisive and necessary. —A. M. Farfaglia.

9951. Nash, John C. (Ohio State U.) **The relationship of ordinal status to sex-role identity, father-identification, and self-esteem among university males.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1916.

9952. Nelson, Barbara A. & Allen, Dorothy J. (Ohio State U., Physical Education Div. for Women) **Scale for the appraisal of movement satisfaction.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 795-800.—Investigated the possible significance of S's attitude toward his ability to move on his self-concept. To explore this variable, a scale was developed to assess S's satisfaction or dissatisfaction with his movement ability. By the use of a panel of 8 experts who judged the items, and through item analysis, the original 129 items were reduced to 50 in a final form. This form was administered to 877 14-21 yr. old men and women. Reliability was .95. Results indicate that males tended to express greater satisfaction with their ability to move than females, and older Ss tended to express less satisfaction than younger Ss.—*Journal abstract*.

9953. Potapow, Michel. A. **timidez.** [Timidity.] *O Hospital*, 1969(Apr), Vol. 75(4), 1493-1494.—Discusses factors which influence the development of timidity (i.e., femininity, masculinity, stuttering, self-love, asocial rearing, and poverty). Timidity generally manifests itself following crises related to the child's exposure to peers which give rise to feelings of self-annoyance. Timidity is particularly intensified following contacts with the opposite sex and situations favoring increased masturbation or moral conflicts. Delay in sexual development contributes toward timidity, revealing itself in agonized adult heterosexual relationships which affect personality and frequently result in social isolation.—B. A. Stanton.

9954. Stock, Mary J. (St. Louis U.) **Separation anxiety in college women.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3879.

9955. Vaught, Glen M. & Solomon, Warren. (State University Coll. New York, Oswego) **Field dependence and inner-other directedness.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 801-802.—Investigated the relationship of inner-other directedness and field dependency as perceptual cognitive style. 51 male and 49 female undergraduates were given Kassarian's Inner-Other-Directed (I-O) Scale following 8 trials with the Rod and Frame Test (RFT). No significant correlations were found. 2 separate factor analyses were performed on the scale matrices. Marked differences between the sexes were found. This finding suggests "that the factor structure of the scale items was different for males and females, in fact, 2 different sex-linked scales were obtained." It is concluded "that field dependence and inner-other directedness are not comparable personality dimensions."—S. Knapp.

9956. Yater, Allan C. (St. Louis U.) **Differentiation: A psychological construct.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3881.

correlates of dogmatism. *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 70-81.—Reports a study of the relationships between an abbreviated dogmatism scale, 2 dogmatism subscales, and perceptions of time. Using 436 Ss ages 17-22, it was found that, dogmatism relates to anxiety about time, a reduction in the present's and future's importance, and an emphasis on the past. While dogmatic Ss reveal tolerance of fantasy activity generally, high-dogmatic women reveal a special interest in regaining their personal pasts and foreknowing their futures, whereas high-dogmatic men fantasize the recovery and preknowledge of time before their birth and after their death. Discussion includes sex differences in the temporal correlates of dogmatism and speculations about the meaning of time generally in the clinical profiles of dogmatic persons. (35 ref.)—*Journal abstract*.

9958. Davidson, Park O. & Bobey, Marie J. (U. Calgary, Alberta, Canada) **Repressor-sensitizer differences on repeated exposures to pain.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 711-714.—Administered a Hardy-Wolf-Goodell heat test and a pressure algometer test of pain tolerance to 72 female nursing students divided into 2 groups on the basis of their Repression-Sensitization Scale scores. $\frac{1}{2}$ the Ss received the heat test 1st while $\frac{1}{2}$ received the pressure test 1st. 5 min. elapsed between the 2 trials. Analysis of data indicated that repressors had a higher tolerance for pain than sensitizers on the 1st trial. However, repressors showed a significant decrease in their tolerance scores from Trial 1 to 2, but not sensitizers. Results are opposite to those expected, indicating that personality factors may have a different effect on the way an individual copes with repeated exposures to psychological stresses and with repeated exposure to pain. (17 ref.)—*Journal abstract*.

9959. Dixon, Michael C. (U. Texas) **Opinion change in high, middle, and low self esteem subjects under two conditions of dissonance arousal.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1887.

9960. Houston, B. Kent. (U. Kansas) **Anxiety, defensiveness, and differential prediction of performance in stress and nonstress conditions.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 66-68.—Defensiveness may refer to verbal denial of anxiety or anxiety-reducing maneuvers. Whether a measure of defensiveness will improve prediction of behavior from an anxiety scale depends on which aspect of defensiveness the scale measures and the situation in which people are observed. Adjustment of MA Scale scores for Denial scale scores improved prediction of digits-backward performance in a nonstress condition, but decreased prediction of task performance in a stress condition, with 48 male undergraduates.—*Journal abstract*.

9961. Jacobs, Larry; Berscheid, Ellen, & Walster, Elaine. (Temple U.) **Self-esteem and attraction.** *Journal of Personality & Social Psychology*, 1971(Jan), Vol. 17(1), 84-91.—Presents contradictory research findings of learning theorists, clinicians, and dissonance theorists concerning the relationship of self-esteem to interpersonal attraction and receptivity to affection. An alternative explanation is proposed and tested, based on the assumption that low self-esteem individuals are unusually receptive to affection when they realize that it is being offered, but that it is most difficult for them to recognize affectionate overtures. A laboratory experi-

Behavior Correlates

9963. Jones, Mary C. (U. California, Berkeley) **Personality antecedents and correlates of drinking patterns in women.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 61-69.—Classified members of a longitudinal study on the basis of their drinking behavior. Youthful and adult personality characteristics of the women were assessed by the California Q-Set and by behavior ratings. The core of traits which described the cohorts of each category of women drinkers were discernible to raters in the early adolescent period. Problem drinkers and abstainers (the extremes in the sample) have in common certain traits which suggest inadequate coping devices. Heavy drinkers have a history of social, manipulative competence; moderate drinkers have a history of likable, self-sufficient qualities. Light drinkers are more adaptive than abstainers and more socially skillful. Adult alcohol-related behavior is to some extent an expression of personality tendencies which are exhibited before drinking patterns have been established.—*Journal abstract.*

9964. Lester, David. (Suicide Prevention & Crisis Service, Buffalo, N.Y.) **Correlates of "animism" in adults.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 806.—Ss who responded animistically to a questionnaire inquiring whether different kinds of objects were living or nonliving were found to have a tendency to greater category width than Ss who did not respond animistically. Ss were 9 female and 20 male undergraduates.—*Author abstract.*

9965. Merrens, Matthew R. & Richards, William S. (Western Illinois U.) **Acceptance of generalized versus "bona fide" personality interpretation.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 691-694.—Explores student responses to generalized and "bona fide" personality interpretations in 2 experiments. The "fake" generalized interpretation was significantly preferred and more highly rated than interpretations based on 120 undergraduates' Personality Research Form scores. Explanations and consequences of these findings were discussed.—*Journal abstract.*

9966. Miller, John J. (West Virginia U.) **Internal-external locus of control, and sex differences in relation to susceptibility, situational anxiety, information seeking/confronting behavior, recall of items, and response to preference in high and low threat conditions.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2498.

9967. Phelan, Joseph G., Brooks, Richard, & Brashers, Gladys C. (California State Coll., Los Angeles) **Relationship of kinesthetic figural aftereffect to masculinity-femininity and expectation for internal versus external control of reinforcement.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 863-866.—Obtained kinesthetic figural aftereffect (KFAE) scores from 30 male and 30 female undergraduates in ascending and descending trials, using both dominant and nondominant hands. Scores from the Embedded Figures Test, Masculinity-Femininity scale of the Guilford-Zimmerman Temperament Survey, the Rotter Internal-External Control Scale, and the combined

self-actualization scale of Shostrom's Personal Orientation Inventory were correlated with the KFAE. Hand dominance but not sex affected KFAE. No stable relation appeared between the personality measures and spatial aftereffect from kinesthetic stimulation for men or women. A significant inverse correlation of Masculinity with the External Control Scale score tends to confirm the cognitive style hypothesis that Ss who think of themselves as masculine in identification tend to act as though the reinforcements in life are internal.—*Journal abstract.*

9968. Toman, Wlaler. (Brandeis U.) **Never mind your horoscope, birth order rules all.** *Psychology Today*, 1970(Dec), Vol. 4(7), 45-49, 68-69.—A typology based on sex and birth order was developed from the study of 16 adjusted and 16 divorced couples, 2000 German and Swiss families, and about 700 other individuals. It is concluded that sex and rank are crucial determinants of personality and that marriages are most successful when individuals duplicate their family positions by marrying a spouse of the appropriate rank. Some sources of added complexity are given and the personality types are described.—*E. J. Posavac.*

9969. Torreta, Delfina M. (Utah State U.) **Somesthetic perception of clothing fabrics in relation to body image and psychological security.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3731-3732.

9970. Weisberg, Paul. (U. Alabama) **Student acceptance of bogus personality interpretations differing in level of social desirability.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 743-746.—119 unsuspecting college students were given a personality drawing test and wk. later received 12 faked interpretive statements. The majority of the returned statements were written to imply social adjustment which, depending upon random assignment, was either favorable, unfavorable, or neutral. Ss in the favorable and neutral groups endorsed the credibility of the interpretations in general with greater intensity than those in the unfavorable group and were more convinced of the veracity of each individual statement, including 2 uncomplimentarily-worded statements which were contained in the profiles of all 3 groups.—*Journal abstract.*

INTELLIGENCE

9971. Burt, Cyril. (U. London, England) **Intelligence and heredity: Some common misconceptions.** *Irish Journal of Education*, 1969(Win), Vol. 3(2), 75-94.—The concept which has given rise to the so-called nature-nurture controversy was that of a genetic component entering into all intellectual activities, termed "intelligence." The widespread use of the term has resulted in a confusing variety of meanings. The factual evidence for a genetic component is summarized in some detail and the influence of environmental factors briefly discussed. Several important corollaries for practical education are drawn from the conclusions. (18 ref.)—*Journal abstract.*

9972. Meili, Richard. (U. Bern, Inst. of Psychology, Switzerland) **Faktorenstruktur und Intelligenzentwicklung.** [Factor structure and mental development.] *Schweizerische Zeitschrift für Psychologie und ihre Anwendungen*—Regarding the controversial evidence for H. E. Garrett's differentiation hypothesis a distinction is proposed between primary and secondary factors of intelligence. Secondary factors, since they depend upon specific experience, emerge, and are subject to change in

the course of mental development. However, preliminary data suggest the stability of the structure as well as of the relative strength within a given individual of the primary factors (complexity, plasticity, globalization, fluency). If this hypothesis proves to be correct, it follows that the increase in mental capacity is to be explained by additions to and structural changes in the mental organization. Intelligence factors, then, do not determine the intellectual level of an individual, but rather are the antecedents of his discrepant achievements in various types of problems, given his general achievement level. (French summary) (22 ref.)—*English summary*.

9973. Resnick, Robert J. & Entin, Alan D. (Medical Coll. of Virginia) **Is an abbreviated form of the WISC valid for Afro-American children?** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 97-99.—Rescored the protocols of 80 urban Afro-American children who had a complete WISC administered using the P. Satz and S. Mogel criteria for an abbreviated intelligence measure. Extremely high correlations among IQs were found which were consistent with other short-form research. However, when mean differences between the full administration and abbreviated form were examined, contradictory results were obtained. A considerable number of Ss showed upward changes in labeled intelligence level when the abbreviated form was used. Since these Ss were sampled from a population identified as having academic school problems, reliance on short forms for educational disposition seems to be of questionable validity.—*Journal abstract*.

9974. Rochester, D. E. & Bodwell, A. (Southern Illinois U.) **Beta-WAIS comparisons for illiterate and indigent male and female Negroes.** *Measurement & Evaluation in Guidance*, 1970, Vol. 3(3), 164-168.—A representative sample of 50 male and 50 female adults from an evaluation and training center in a large metropolitan area was used to study the feasibility of using the Revised Beta Examination (Beta) to assess the intellectual functioning level of indigent Negro adults. Beta IQs were compared with scores on the WAIS Verbal and Performance and the Full Scale IQs. The WAIS-Beta comparisons revealed significant positive correlations ($p < .01$ for 5 of the r values); r 's ranged from .29 to .79. Findings suggest that the Beta holds promise for assessing intellectual functioning of illiterate and indigent Negroes.—S. M. Amatora.

CREATIVITY

9975. Antell, Maxine J. (New York U.) **The effect of priming and the subliminal presentation of sexual and aggressive stimuli on tests of creativity.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3859-3860.

9976. Hurley, John D. (Boston U., School of Education) **The relationship of dogmatism with two measures of originality.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2183.

9977. Price, Alan D. (Monmouth Coll.) **Effect of role-inducing instructions on performance on a new test of creative thinking.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 919-924.—Describes the Modified Bennett Test (MBT) and presents the results of a study in which it was used to test the effects of role-inducing instructions on creative thinking. 24 undergraduates were given an instructional set to assume the role of

either an unregulated or regulated character. Subsequent to the role-inducing instructions, Ss responded to $1/3$ of the items of the MBT. The role-inducing instructions and the items of the MBT were counterbalanced in a repeated measures design with each S serving as his own control. The hypothesis that the responses given in the unregulated condition would, in general, be more creative than those given in the regulated condition was confirmed.—*Journal abstract*.

9978. Roweton, William E. (U. Wisconsin) **Effects of verbal pretraining, idea checklists, and cognitive styles upon creativity.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1087.

9979. Schaefer, Charles E. (Fordham U., Creativity Center) **"Onomatopoeia and Images": Further evidence of validity.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 786.—Tested the validity of the Onomatopoeia and Images Test of originality in 25 male and female undergraduates. Results were correlated with the literary-art scoring key for the Biographical Inventory-Creative Adolescents which Ss also completed. The Spearman rank coefficient between the pairs of ranks was .64 ($p < .01$). It is concluded that the test may "be an effective addition to test batteries for predicting creative achievement of a literary-art nature."—S. Knapp.

9980. Schaefer, Charles E. & Bridges, Carolyn I. (Fordham U., Creativity Center) **Development of a Creativity Attitude Survey for children.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 861-862.—Presents a Creativity Attitude Survey which has been constructed for research use at the elementary school level. Normative data are available for over 20 samples of school children. Reliability and validity data collected to date indicate that the Creativity Attitude Survey is a promising instrument for further research. It appears to be a particularly effective measure of the immediate and long-term effects of creativity training programs.—*Journal abstract*.

9981. Stephenson, Robert W. & Stephenson, Matilde K. (American Inst. for Research, Washington, D.C.) **Un esquema de clasificación de las fuerzas que afectan el comportamiento original y creador.** [The classification scheme of forces which affect original behavior and creativity.] *Revista Interamericana de Psicología*, 1970(Jun), Vol. 4(2), 95-103.—Describes a possible reorganization of the research results on creative behavior. This conceptualization is based on the logical combinations that exist when the various forces that effect creative behavior and originality are analyzed in terms of (a) the model of access to the preconscious, (b) the model of numerical complexity, (c) the model of manipulation of the field, and (d) the model of cultural influence. (Portuguese summary) (24 ref.)—*English summary*.

PERSONALITY MEASUREMENT

9982. Abbott, Robert D. (California State Coll., Fullerton) **Stylistic response variance and trait inference from the Study of Values.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 911-914.—Administered the Allport-Vernon-Lindzey Study of Values and 4 scales accounting for possible trait confounding variance, Edwards' SD, Wiggins' SD, Marlowe-Crowne, Social Desirability scale, and Welsh's R, to 171 female and 116 male undergraduates. The resultant factor structure and coefficients of determination (all less than .07) between

the 2 sets of scales supported the discriminant validity of the Study of Values scales for the 4 stylistic sources measured and their continued use as trait indicants unconfounded by stylistic variance.—*Journal abstract.*

9983. Barna, James D. (St. Louis U.) **Development of a scale of causal constructs and its relationship to selected personality tests.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3861.

9984. Haley, G. A. (York U., Toronto, Ontario, Canada) **Item-analysis procedures for enhancing validity of existing personality scales.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 847-853.—Employed item-analysis procedures to reduce a 51-item hostility scale to a 20-item version with equivalent reliability and convergent validity, yet freer of desirability variance. Evidence presented in a multitrait-multimethod matrix (8 traits by self-ratings of trait adjectives and by item endorsements) indicate an enhancement of discriminant validity in the shorter form. The technique is presented as a means for improving the validity of scales developed by other earlier scale construction methods.—*Journal abstract.*

9985. Handal, Paul J. & Rychlak, Joseph F. (Georgetown U.) **Curvilinearity between dream content and death anxiety and the relationship of death anxiety to repression-sensitization.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 11-16.—Discusses the merits of a defense mechanism model in the research dealing with death anxiety. The prediction was made that both high and low scorers on the Death Anxiety Scale (DAS) would report more unpleasant and death dream themes than Ss who score in the middle ranges of DAS. The Repression-Sensitization (R-S) Scale was used as a companion predictive instrument to the DAS. Findings are reported for 43 and 36 undergraduates, with 1 yr. intervening between data collections. Curvilinearity between DAS and dream content was found in both Samples 1 and 2. The R-S scale failed to predict comparably to the DAS, and some possible reasons for this difference are discussed. (18 ref.)—*Journal abstract.*

9986. Hoffmann, Helmut. (Minnesota State Hosp., Willmar) **Note on the personality traits of student nurses.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 1004.—Administered the Personality Research Form to 80 freshman student nurses. Compared with the normative group from the test manual, the student nurses scored higher in harm avoidance, nurturance, order, and desirability, but lower in affiliation, aggression, autonomy, change, defence, dominance, impulsivity, and understanding.—*Author abstract.*

9987. Mirels, Herbert L. & Garrett, James B. (Ohio State U.) **The Protestant Ethic as a personality variable.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 40-44.—Administered a scale comprised of items selected on the basis of a series of factor analyses and a battery of personality measures to 117 undergraduates in an effort to explore the psychological meaning of the protestant ethic. Scores on the Protestant Ethic Scale were positively related to the Mosher scales for Sex Guilt and Morality Conscience Guilt but were unrelated to the Hostile Guilt Scale. Scores were also positively associated with authoritarianism and with expectancy for internal control. In a 2nd study with 54 male and 55 female undergraduates, Protestant Ethic Scale scores were positively correlated with SUIB scales for occupations demanding a concrete,

pragmatic approach to work, and negatively correlated with scales for occupations which typically require emotional sensitivity, theoretical interests, and humanistic values.—*Journal abstract.*

9988. Schill, Thomas & Schneider, Larry. (Southern Illinois U.) **Guilt and self-report of hostility.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 713-714.—Obtained correlations between Mosher's forced-choice measure of hostility guilt and the subscales of the Buss-Durkee Hostility Inventory. For 58 men, Mosher guilt was related to the assault (-.27) and verbal (-.35) subscales and with assault (-.44), negativism (-.43), and verbal (-.40) subscales for 72 women. As anticipated, no significant relationship was found between the Buss-Durkee Guilt scale (a measure of guilt as a feeling or state) and Mosher guilt (a disposition to inhibit aggression).—*Journal abstract.*

9989. Schill, Thomas & Schneider, Larry. (Southern Illinois U.) **Relationships between hostility guilt and several measures of hostility.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 967-970.—Related scores on Mosher's forced-choice Hostility Guilt Scale for females to a projective and an objective measure of hostility. The projective measure was the extent to which 70 female undergraduates used the hostile alternative in making up sentences to a list of homonyms with hostile and neutral meanings. The objective measure was the Buss-Durkee Hostility Inventory. Hostility guilt correlated negatively and significantly with the projective measure and with the following Buss-Durkee scales: Assault, Negativism, Resentment, Suspicion, Verbal, and Total Hostility, summing over all subscales except Guilt. The projective measure correlated positively and significantly with the Assault and Suspicion scales, as well as the Total Hostility score.—*Journal abstract.*

9990. Sciortino, Rio. (Stevens Inst. of Technology) **Allport-Vernon-Lindzey Study of Values: I. Factor structure for a combined sample of male and female college students.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 955-958.—Presents a principal components analysis on the self-ratings (for a combined sample) obtained from the Allport-Vernon-Lindzey Study of Values (N = 150 combined sample of 102 male and 48 female college students). The obtained principal components were then rotated according to the varimax procedure. The varimax factors obtained were esthetic, social, and religious.—*Journal abstract.*

9991. Sciortino, Rio. (Stevens Inst. of Technology) **Personality adjective list: I. Factor structure for a combined sample of male and female college students.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 815-817.—Performed a principal components analysis on the self-ratings obtained from the Personality Adjective List (PAL-I) for a sample of 202 male and female undergraduates. The components were then rotated according to the varimax procedure. The varimax factors obtained were congeniality, ingenuity, striving, vivacity, articulateness, curiosity, meditateness, individuality, and open-mindedness.—*Journal abstract.*

9992. Skolnick, Paul & Shaw, Jerry I. (San Fernando Valley State Coll.) **Brief note on the reliability of the Janis and Field "Feelings of Inadequacy" Scale.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 732-734.—Obtained an interitem correlation matrix and correlation of each item with the total test score on Janis and Field's "Feelings of Inadequacy" Scale. 2 items correlated poorly with other items and with the total test

score. It is suggested that these items might be eliminated.—*Journal abstract.*

9993. Wainwright, Bruce B. (U. California, Los Angeles) **Quantitative scales for scoring human figure drawings.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1637.

9994. Zapan, G. (U. Bucharest, Romania) **The method of the objective appreciation of personality.** *Revue Roumaine des Sciences Sociales-Série de Psychologie*, 1970, Vol. 14(1), 31-44.—Stresses the importance of keeping pupil's characterization records for school and life, and summarizes problems which should be translated into life through the method of objective personality appreciation. 10 such problems are enumerated. It is suggested that education systems introduce cybernetic analysis which would facilitate the appreciation of one's personality. The importance of knowledge of human beings at 1st impression is emphasized. And the content of characterization records and school and vocational orientation are discussed.—*I. Sirotin.*

9995. Zuckerman, Marvin. (U. Delaware) **Dimensions of sensation seeking.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 45-52.—Tested 63 new items for the Sensation Seeking Scale (SSS) in an attempt to develop new scales representative of hypothesized dimensions of sensation seeking. An experimental form was given to 332 and 92 undergraduates at 2 universities. Data from the 1st university was factor analyzed separately for males and females. Besides the general factor running through diverse items, 4 factors were extracted from the rotated factor loadings: thrill and adventure seeking, experience seeking, disinhibition, and boredom susceptibility. The 1st 3 factors showed good factor and internal scale reliability in both sexes and samples. Since boredom susceptibility was not well defined in females and was of minimal reliability, it was retained as a subscale for males only. (24 ref.)—*Journal abstract.*

Inventories

9996. Hedenberg, John W. (U. California, Los Angeles) **Personality types via an objective multi-variate search technique.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3868.

Projective Techniques

9997. Busey, Joseph S. (U. North Carolina, Chapel Hill) **The effects of variation in TAT-like stimuli and in instructions upon hostile-aggression measures of behaviorally rated groups.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3862.

9998. Gori, R. C. & Beauvois, J. L. **Notes sur les techniques projectives et la bipolarité du discours.** [Notes on projective techniques and the bipolarity of language.] *Bulletin de Psychologie*, 1969-1970, Vol. 23(17-19), 1066-1068.—Presents psycholinguistic differences between data obtained from the Rorschach and the TAT.—*R. E. Smith.*

9999. Haward, L. R. (Aeromedical International, Chichester, England) **The use of specially devised thematic apperception cards in aviation psychology.** *Flight Safety*, 1969(Sep), Vol. 3(2), 12-14.—Found that real-life TAT stimulus cards which have manifest relevance to the immediate personal problems of the S, are more acceptable to him and produce greater facility

in verbal expression than the standard cards, and so increase the raw data for analysis. Attempts to cover up are invariably revealed by concomitant GSR monitoring, and specificity of the stimulus enables the precise problem area of the S to be pinpointed and evaluated. Furthermore, because the stimulus cards depict real situations in which the S is actively involved, changes in response to these cards reflect real changes in attitude or reaction of the S to these real-life situations. The modified cards therefore offer a direct and incisive psychometric tool for both diagnosis and therapy.—*Journal summary.*

10000. Hersen, Michel. (Veterans Administration Center, Jackson, Miss.) **Sexual aspects of TAT administration: A failure at replication with an inpatient population.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 20-22.—Replicated the study of J. Masling and S. Harris (see PA, Vol. 43:9855) which found that male graduate Es tended to administer more sexual-romantic TAT cards to female clients than male clients, while female graduate Es did not make this differentiation. Records of the administration of the TAT from January 1956 to December 1968 at a state hospital by 15 male Es (mean age = 30) and 5 female Es (mean age = 27.2) were analyzed. The previous findings were not supported in that there was no evidence that male Es administered significantly more TAT cards or a higher proportion of sexual-romantic cards to females than males. Reasons for the difference in findings are suggested.—*S. Knapp.*

10001. Kelly, William L. (Georgetown U.) **The Group Kahn Test of Symbolic Arrangement.** *International Journal of Symbolology*, 1969(Dec), Vol. 1(2), 15-29.—The Group Kahn Test of Symbolic Arrangement (G-KTSA) has been constructed to extend the potential of the KTSA usually administered as a test for individuals. Test components, test administration procedures, and scoring categories are all described in standardized form. Levels and patterns of symbolization, symbols sorting, symbol affect, and background color preference are variables which may now be accurately measured on large populations in many areas of personality and cultural dynamics. Normative data has been collected on over 800 Ss and will be reported in a forthcoming article.—*Journal abstract.*

Rorschach Test

10002. Pethő, Bertalan. (Medical U., Psychiatric Clinic, Budapest, Hungary) **Zur wissenschaftlichen Grundlegung des Rorschach-Tests: II. Mitteilung: Projektion, Gestaltung, Diskursivität.** [On the Scientific foundation of the Rorschach-Test: II. Note: Projection, structuring, discursiveness.] *Zeitschrift für experimentelle und angewandte Psychologie*, 1970, Vol. 17(3), 423-453.—A hierarchy of performance levels can be distinguished: elementary performance characterized by a structure corresponding to a reflex arc, the level of independent preforms characterized by projections, and the level of discursive conceptual functioning, the highest level in a biological-conceptual continuity. A scientific approach to the Rorschach technique must pay particular attention to this level. (English & French summaries) (114 ref.)—*W. J. Koppitz.*

CLINICAL PSYCHOLOGY

10003. Abraham, Giorgio. III Convegno sul tema: "L'impotenza sessuale": Su qualche aspetto teorico e pratico dell'impotenza sessuale. [3rd annual convention on the subject: "Sexual impotence": On some theoretic and practical aspects of sexual impotence.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 297-300.—Sexual impotence, whether it be male or female, remains a pathogenic problem which in part is not resolved. If the psychoaffective origin of such a disturbance is proven, the mechanisms which cause the effective symptomatology are unclear. Psychoanalysis has contributed to the understanding of sexual disturbances. There is a tendency among psychoanalysts to review certain concepts previously thought of as indisputable, e.g., frigidity was always associated with neurosis, but many neurotic and even psychotic women are not frigid and vice versa. There is increased interest in impotency in men with depressive disorders. Disturbances of sexual potency lie between 2 extremes: (a) impotence within the limits of the norm (a time of intense emotional concern or lack of stimulus), and (b) impotence which comes with an alteration of the personality. Today it is realized that a normal partner can be a real accomplice in impotency. It is frequently necessary to cure the couple together, because impotence for many is misfortune, but for others it is an accepted part of life.—A. M. Farfaglia.

10004. Ballinger, Brian R. (Royal Dundee Liff Hosp., Scotland) **The prevalence of nail-biting in normal and abnormal populations.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 445-446.—Members of the normal population and patients in a mental deficiency hospital and a psychiatric hospital were examined for evidence of nail-biting. A high prevalence was found in all populations, particularly under the age of 40. It is suggested that nail-biting is not an important psychiatric symptom.—*Journal summary.*

10005. Cazzullo, C. L., Goldwurm, G. F., & Petrella, F. (U. Milan, Medical School, Italy) **Correlation between psychopathological data and higher nervous activity evaluated by four classical reflexological methods in neuropsychiatric patients.** *Conditional Reflex*, 1970(Oct), Vol. 5(4), 207-232.—Tested 21 normals, 51 neurotics, 23 schizophrenics, and 17 patients with Parkinson's disease for the level of unconditional reactions in 1st signaling and 2nd signaling systems. Somatic motor, vascular, and verbal reaction techniques were used. Results indicate that (a) neurotics did not differ greatly from normals; and (b) schizophrenics showed learning difficulties in somatic motor reactions and signs of dissociation and regression in 1st and 2nd signaling systems. Higher nervous activity of parkinsonian Ss showed characteristic inertia; learning showed little deficiency in verbomotor reactions and greater deficiency in defense motor reactions. Results do not support differentiation of the nosographic groups by means of these techniques. (40 ref.)—*Journal summary.*

10006. Coleman, Jules V. (Yale U.) **Adaptive integration of psychiatric symptoms in ego regulation.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 17-21.—Considers the problem of ego integration and regulation of symptoms in adaptive function. The extraordinary persistence of psychiatric symptoms is an intrinsic aspect of the individual's psychic functioning. Symptoms are subjected to the adaptive mechanisms by

which the ego maintains the integrative balance of the personality system. In themselves, symptoms are neither normal nor abnormal; they are significant only in relation to the individual's social-ecological system. Influences exerted by social institutions and groups are inherently supportive and tend to stabilize human behavior. A basic principle of ego functioning is that equilibrium must be restored at whatever level is feasible. Distress occurs when the person's inherent attitude of unquestioned confidence in social belonging and in the virtue and protectiveness of the group is undermined.—*Journal abstract.*

10007. Ellard, J. (3 Harrison St., Crenmore, New South Wales, Australia) **Psychological reactions to compensable injury.** *Medical Journal of Australia*, 1970(Aug), Vol. 2(8), 349-355.—Offers a "classification of the syndromes seen in psychological reactions to compensable injuries, and...[raises] a fundamental question which seems to arise from some of the syndromes to be discussed." It is suggested that most of the time the behavior of patients will conform to 1 of the following: attitudinal pathosis, schizophrenia, bizarre hypochondriasis, traumatic neurosis, depression, and compensation neurosis.—P. McMillan.

10008. Evans, J. W., Lovel, T. W., & Eaton, K. K. **Social workers and general practice.** *British Medical Journal*, 1969(Jan), Vol. 1(5635), 44-46.—Describes weekly case conferences under the leadership of the family doctor, designed to provide help in the management of problem families in a new town. These conferences proved to be the easiest and quickest means of exchanging important and often confidential information, and were also attended by health visitors, mental welfare and child care officers, and psychiatric social workers. The Seebohm Committee has recommended that a unified department of social service be created. The family doctor will be able to utilize his personal knowledge and experience in handling social misfits and delinquents, and individual team members will not only present their own problems but can also help "to operate a joint machinery for recovery."—J. Halev.

10009. Forssman, Hans. (U. Göteborg, Psychiatric Research Centre, Hisings Backa, Sweden) **The mental implications of sex chromosome aberrations.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 353-363.—The Blake Marsh Lecture for 1970, delivered before the Royal Medico-Psychological Association, summarizes the evidence that abnormal sex chromosome complement contributes to mental retardation, psychosis, epilepsy, and personality deviations, including antisocial conduct. A reasonable hypothesis is that the behavior problems stem from minimum brain damage, EEG and epilepsy data supporting that idea. The recent and distinct evidence suggests that countless other forms of minimum brain dysfunction exist, which indicates that reasons other than environment should be considered in determining causes of criminal conduct. (63 ref.)—R. L. Sulzer.

10010. Frighi, Luigi & Ligi, Antonio. III Convegno sul tema: "L'impotenza sessuale": Rilevi statistici sull'impotenza sessuale tratti dall'esame psichiatrico di una popolazione studentesca. [3rd annual convention on the subject: "Sexual impotence": Statistical observations on sexual impotence taken from a psychiatric exam among students.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 312-319.—Conducted a 1-yr statistical study on cases of impotence and frigidity

among 18-25 yr. old university students. Of 1490 Ss, 101 (6.7%) suffered from impotence and frigidity. Clinical records and interviews were used. Compared to a former study, sexual problems are discussed more openly at present. Results (a) show that 73.2% suffered from impotence, and 26.7% from frigidity; (b) divide Ss into 3 groups according to age; (c) show that there is a greater percentile in diagnostic categories of hyperemotive personalities and anxious-phobic neurosis; and (d) show a further breakdown in psychic disturbances according to their gradient severity as well as frigidity manifesting itself most often in hysterical forms. A classification is presented of impotence with total impotence encompassing 39% and precocious ejaculation, 20%. This study is regarded important because it is conducted among individuals at a time in their lives when they are searching for their psychosexual identities. (21 ref.)—A. M. Farfaglia.

10011. Gillibert, Jean. *Réflexions sur l'hallucination*. [Thoughts on hallucination.] *Interprétation*, 1968(Jan), Vol. 2(1), 65-79.—Explores in terms more metaphysical than psychoanalytic Freud's interpretation of hallucination, adding to rather than refuting Ey's interpretation which is also discussed. Also an attempt is made to clarify the question of knowing whether madness (the primary hallucinatory or delusional experience) has to do more with truth and the world, or rather with man and truth as he is capable of perceiving it.—T. N. Webster.

10012. Gladkova, T. D. *Ukloneniya v dermatoglyfike pri nekotorykh zabolevaniyakh*. [Dermatoglyphic deviations in some diseases.] *Voprosy Antropologii*, 1968, No. 29, 148-153.—Presents a survey primarily of the non-Soviet literature on dermatoglyphic deviations arising in certain diseases associated with sex-chromosomal aberrations and autosomic trisomia—conditions which have an adverse effect on mental development.—I. D. London.

10013. Haider, I., Matthew, H., & Oswald, I. (Royal Infirmary, Regional Poisoning Treatment Centre, Edinburgh, Scotland) *Electroencephalographic changes in acute drug poisoning*. *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 23-31.—Employed continuous EEG monitoring in a study of 127 cases of acute drug poisoning. Barbiturates, mandrax (methaqualone 250 mg. with diphenhydramine 25 mg.), nitrazepam, tricyclic antidepressants, and miscellaneous drugs were involved. EEGs were classified into grades: Grade I, predominate alpha rhythm; Grade II, predominate theta rhythm; Grade III, predominate low/high voltage delta rhythm; Grade IV, delta waves with or without brief isoelectric intervals; Grade V, suppression burst activity alternating with electrical silence; Grade VI, near silence; and Grade VII, isoelectric, totally unresponsive to all stimuli. Grades I and II were associated with conscious or drowsy Ss, Grades III and IV with Ss who were unconscious but responded to painful stimuli, and Grades V-VII with Ss in a deep coma. Grades V-VII could not be distinguished clinically. A significant correlation was found between EEG grade of coma and the clinical assessment of depth of coma, body temperature, and serum levels of long acting barbiturates and mandrax. Routine clinical use of the EEG and other devices for continuous cerebral monitoring is discussed. (French summary) (19 ref.)—*Journal summary*.

chology at the Crichton Royal, Dumfries: A personal account. *Bulletin of the British Psychological Society*, 1969(Oct), Vol. 22(77), 303-306.—The Department of Psychological Research at the Crichton Royal, Dumfries, Scotland, was 1 of the important nurseries of clinical psychology. The history of this department over the period 1943-1964, herein recounted, is essentially the history of clinical psychology. The contributions of the various members of the department during the 20-yr period are summarized.—V. S. Sexton.

10015. Kleinsasser, Dennis & Morton, W. Duke. (Ft. Logan Mental Health Center, Denver, Colo.) *Treatment ethics: A fine and sometimes elusive line*. *Journal of the Fort Logan Mental Health Center*, 1968(Spring), Vol. 5(1), 1-20.—Examined the relationship between ethics and the treatment of the mentally disturbed after an incident in an adult psychiatric treatment unit at a state mental health center resulted in several clinical staff members being dismissed for mistreating a patient. 66 Ss from various levels of the staff rated the ethical acceptability of the incident and 3 videotaped portrayals of hypothetical Patient x Staff interactions. Each of the videotaped interactions was also rated following the introduction of 3 qualifying statements. Estimates of certainty were obtained following each rating. Results show that there is some variability in judging acceptability of Staff x Patient interactions, which increases with the addition of qualifications. There were no reliable differences between various administrative levels. Qualifying statements appear to be important components of the judgment process, but also are potential sources of conflict among the staff. Questions raised by the study about the level of variability in ethical standards which can be tolerated and proper reaction to a violation of an ethical standard are noted and discussed.—*Journal summary*.

10016. Lindenauer, Geoffrey G. (Inst. for Emotional Education, New York, N.Y.) *Setting and structure: The IFEE therapeutic community*. *Journal of Emotional Education*, 1969(Sum), Vol. 9(3), 88-95.—Describes the setting and structure of the Institute for Emotional Education Therapeutic Community, and relates the nature of the facilities and the integral part they play in the total program of emotional education.

10018. Michaux, Léon. (14 Emile-Augier Blvd., Paris, France) *L'enfant et la mort*. [Child and death.] *Acta Paedopsychiatrica*, 1970(Apr), Vol. 37(4-5), 137-147.—5 aspects of children's deaths are considered: (a) the notion of death in children suffering from psychiatric disorders (melancholy, obsessions, epilepsy, schizophrenia), (b) the child without mental anomalies faced with real or fictitious danger to life, (c) the concept of death in psychically healthy children, (d) children's and adolescents' suicides, and (e) children and adolescents as murderers. Their relative and providential rareness is reassuring and surprising, the more so considering the multiplicity of factors leading the young to homicide.—G. Rubin-Rabson.

10019. Moreno, Mario. III *Convegno sul tema: L'impotenza sessuale femminile: La frigidity*. [3rd annual convention on the subject: "Sexual impotence": Sexual impotence in the female: Frigidity.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 289-297.—Studied fri-

gidity by considering the various states of female existence. Frigidity is a failure in a relationship between a man and a woman. It is a symptom of the pathology of the couple and not simply a female neurosis. The experience of pleasure in the woman is connected to the personal relationship, even if this relationship may appear superficial, occasional, and insignificant. The role of the male partner is fundamental, and one can even speak of "normal" frigidity when the male is immature. The differences between clitoric orgasm and vaginal orgasm were studied as well as the difference between sexual satisfaction and the paroxysm of orgasm. In absolute frigidity both initial delight and orgasm are absent; in relative frigidity orgasm is rare and not very intense; and passionate frigidity describes women who have initial delight but cannot reach an orgasm. Various cultural models of the female were listed in relation to frigidity: (a) the woman as a mother; (b) the woman as her mother's daughter; (c) the woman as her father's daughter; and (d) the man's woman, who disassociates herself from the other roles. (24 ref.)—A. M. Farfaglia.

10020. Nielsen, Johannes, et al. (Århus State Hosp., Cytogetic Lab., Risskov, Denmark) **Klinefelter's syndrome in children.** *Journal of Child Psychology & Psychiatry & Allied Disciplines*, 1970(Nov), Vol. 11(2), 109-119.—Studied 9 boys with 47,XXY and 2 with 46,XY/47,XXY chromosomes all examined by psychiatrists before the age of 16. They had a mean IQ of 95.1 ± 8.4 with a range from 81-107. The mean age at the time of behavior disturbance was 6.6 ± 2.7 yr. with a range from 3-12 yr. 7 were very easy to manage as babies and had no defiance period. They were all immature for their age, 8 had poor contact with other children, 9 had difficulties at school, and 9 had neurasthenic symptoms. The personality deviation started early in life. Ss, during their 1st yr. of life, seemed to be remarkable easy, quiet, and passive without any real defiance period. The cause of referral to psychiatric service seemed, however, in most cases to be difficulties at school mainly in relationships with other children. Early diagnosis of Klinefelter's syndrome is important and beneficial in explanation and support to parents and patients. Follow-up supportive treatment of patients with Klinefelter's syndrome is important in puberty, an especially difficult period for them.—*Journal summary*.

10021. Pisani, D., Ardizzone, E. C., & Nigro, A. (U. Messina, Italy) **Studi sul meccanismo della reazione nevrosica.** [Studies on the mechanism of neurotic reactions.] *Rivista di Neurobiologia*, 1969(Apr), Vol. 15(2), 259-318.—Attempts to demonstrate the neurophysiological nature of psychoneurotic reactions. Variations in pulse rate, GSR, EEG (alpha wave activity), and blood pressures were observable in 4 groups comprised, respectively, of epileptic, oligophrenic, and normal adolescents. Ss were exposed to dull, painful, and fear-evoking stimuli in the form of noises of various intensities, tones, and timbres. Cutaneous electrical stimuli were also applied. Exaggerated responses to all variables were observed in the neurotic and oligophrenic Ss. The following percentages of alpha activity were present in EEGs: normal Ss, 62%; epileptics, 42%; neurotic Ss, 29%; and oligophrenic Ss, 55%. In response to painful stimuli, normal Ss had the same amount of alpha activity (62%), while epileptic Ss had less alpha activity (38%). Neurotic and oligophrenic Ss, however, evidenced increased alpha activity (34 and 77%, respectively). (English summary)—B. A. Stanton.

10022. Pozsonyi, J. & Friesen, H. (Children's Psychiatric Research Inst., London, Ontario, Canada) **Growth hormone investigation in patients with mental dysfunction.** *Canadian Medical Association Journal*, 1971(Jan), Vol. 104(1), 26-29.—Determined human growth hormone (HGH) responses in 73 Ss affected with various forms of mental retardation, or emotional disturbance with normal intelligence and abnormal growth. Ss were stimulated by insulin hypoglycemia and arginine infusion. 4 Ss exhibited absent or impaired pituitary hormone secretion and 1 of them presented a unique syndrome of panhypopituitarism associated with intrauterine growth retardation, long eyelashes and eyebrows, sparse hair, and degeneration of the retina. Statistical analysis indicate no significant HGH peak concentrations in groups of either tall males or stunted females who possessed various sex chromosome abnormalities, nor did these groups differ in a variety of clinical parameters including age, physical growth, birth weight, and intelligence. (French summary) (17 ref.)—*Journal abstract*.

10023. Racanelli, Francesco. **Terapie eterodosse: I guaritori.** [Heterodox therapy: Healers.] *Rassegna Italiana di Ricerca Psichica*, 1969, No. 1-3, 21-34.—Studies the merits of healers, particularly in psychotherapy. "Healer" is defined as one who heals or pretends to heal by empirical, suggestive, mysterious ways which are not recognized by science and often illegal. Empirical healers use herbs, pisan, etc., externally on the part of the body with pain. Hypnotists use electrical or magnetic means. Some healers use radiation, and others use healing fluid by using the hands on the sick organ; some use witchcraft or the evil eye with amulets. Some negative aspects of the healer are that an illness which could have been cured becomes worse due to failure to see a doctor, and that to calm a pain does not mean the illness is cured. The positive aspect of the healer lies in the human relationship of confidence and friendship which exists between the healer and the S. The healer stimulates the will to be cured, and the vital therapeutic energy of the healer is transmitted to the S. It is concluded that a collaboration of good will between doctor and healer is beneficial. The healer must learn to respect the scientific knowledge of medicine and the doctor must recognize the necessary psychic state of the healer.—A. M. Farfaglia.

10024. Ranzato, Francesco P. & Zagami, Elia. III **Convegno sul tema: "L'impotenza sessuale": L'impotenza sessuale nel giovane e nel vecchio: Cause psicologiche.** [3rd annual convention on the subject: "Sexual impotence": Sexual impotence in the young and in the old: Psychological causes.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 324-326.—Defined "young" and "old" as not necessarily chronological. The distinction depends on a psychological particularity which is generally common in individuals of the same age but can occur in individuals of different ages. The young impotent man is afraid to confront life and is dominated by the maternal figure who will show her revenge through castration. In an old man, impotence is 1 of many other "ailments." Impotence is resignation, inability to change. Psychology of the aged is illustrated by 2 cases of a 52-yr-old S and a 30-yr-old S. Both had attitudes of depression and surrendering; they were cured through reawakening former interests and faith in religion, respectively. The youth does not want to accept responsibility or develop an awareness of life. In the

young, sexual activity symbolizes detachment from the family; in the old it is a return to infancy and to the family. Impotence must be confronted on a different basis in young and old. It is necessary to reawaken interests, ideals, religious faith in the old, and make the young active, conscious, and responsible.—A. M. Farfaglia.

10025. Rossi, Romolo & Delmonte, Pietro. III Convegno sul tema: "L'impotenza sessuale": Impotenza sessuale ad insorgenza improvvisa: Problemi psicodinamici. [3rd annual convention on the subject: "Sexual impotence": Sexual impotence which occurs suddenly: Psychodynamic problems.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 329-334.—Studied the difference between early impotence which emerges "stealthily" and impotence which emerges suddenly. In impotence of sudden arising, there was usually some type of previous sexual disturbance, frequently precocious ejaculation. In these Ss a neurotic structure is at the base of a pronounced conflictive structure. A 32-yr-old S and a 27-yr-old S were studied. The connection between impotence which emerges suddenly and conflictive situations was evident. The dynamics were understood through psychotherapy in both cases, and the conflictive situation was present before impotence. It is concluded that sudden impotence has a specific connection with the dynamic structure.—A. M. Farfaglia.

10029. Talbott, John A. (St. Luke's Hosp. Center, New York, N.Y.) *Community psychiatry in the Army: History, practice, and applications to civilian psychiatry*. *JAMA: Journal of the American Medical Association*, 1969(Nov), Vol. 210(7), 1233-1237.—Recently the Army has introduced a new "community" principle which holds that an individual's problems often reflect difficulties within the military unit. 2 consultation programs were conducted by mental health workers with caretakers in the army community: 1 in a basic training division in the United States, the other in Vietnam. Both programs attempted to identify military units experiencing internal difficulties, to understand group factors causing individual pathology, and to reduce the incidence of both individual and unit problems. 10 conclusions are drawn and discussed, e.g. environmental manipulation can keep many neurotics and psychotics at

work and living within their communities. The conclusions drawn can and should be applied to the practice of civilian psychiatry.—*Journal abstract*.

10030. Tourinho, Carlos R. *Prevenção e tratamento dos distúrbios climatéricos*. [Prevention and treatment of climacteric disorders.] *O Hospital*, 1969(Apr), Vol. 75(4), 1453-1461.—Presents encouraging results obtained in treatment of climacteric-associated disorders via combined administration of androgens and estrogens. 20 45-62 yr. old climacteric Ss were given premarin alone or in combination with estrandron-P for a 3-mo period. 15 Ss exhibited marked improvement, 4 Ss experienced some improvement, and 1 S exhibited no response to the drug. It is suggested that the conjoint use of psychotherapy and estrogen-androgen administration is a plausible means of therapeutic management of climacteric disorders.—B. A. Stanton.

10031. Volterra, Vittorio & Soverini, Stefano. III Convegno sul tema: "L'impotenza sessuale": L'impotenza sessuale maschile psicogena: Relazione introduttiva. [3rd annual convention on the subject: "Sexual impotence": Psychogenic sexual impotence in the male: Introduction.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 259-289.—Abnormal human sexual behavior covers many areas of science: from physiology to psychology, from anthropology to sociology, and from ethics to psychiatry. Such behavior in man is influenced by the superior mental activity, as well as by socio-cultural characteristics and by the moral norm of the "milieu." Sexual behavior cannot be studied away from the personal and social psychological picture. Of 8000 Ss in a neuropsychiatric clinic 6% of the men went to specialists because of impotence problems. Of these, 68% had psychopathological manifestations. Instead of psychiatrists they went to the family doctor or perhaps the endocrinologist. The following problems were studied: (a) disturbances in erection, (b) disturbances in ejaculations, (c) orgasmic impotence, and (d) therapeutic possibilities. "Contemporary man is prisoner of a sum of contradictions. According to the male stereotype... he should erotically appreciate his companion and love her with spontaneity but he has such a patriarchal concept of women that he cannot realize a frank eroticism." (3 p. ref.)—A. M. Farfaglia.

10032. Wedge, Bryant. (4310 Janan Way, San Diego, Calif.) *The anticommunist complex*. *American Journal of Psychotherapy*, 1970(Oct), Vol. 24(4), 548-565.—Irrational elements of reactionary anticommunism are placed in a politico-historic perspective. Actualities are seen as only gradually entering into common political awareness. Emotional residual is viewed as pathology.—W. Vernon.

PERSONNEL

10033. Arnhoff, Franklyn. (National Inst. of Mental Health, Div. of Manpower & Training Programs, Bethesda, Md.) *The purpose of mental health services: Manpower and training for what?* *California Mental Health Research Digest*, 1969, Vol. 7(1), 3-17.—Discusses the current interest in new types of mental health workers. Although the manpower for professional and nonprofessional occupations is increasing, there is a concomitant increased need for mental health services. Training of mental health personnel—once limited to graduate degree candidates and professional persons—is now being offered to persons

with substantially less educational background, including housewives, high school graduates, and persons with only a bachelor's degree. It is concluded that the public must be protected from false promises of great increases in service, "when in reality they may be 'served' by someone with little knowledge or skill whose job was created primarily as a means of relieving unemployment." (29 ref.)—A. M. Berg.

10034. Evans, Anne S. & Goldberg, Margaret F. (Boston State Hosp., Mass.) **Catholic seminarians in a secular institution.** *Mental Hygiene*, 1970(Oct), Vol. 54(4), 559-564.—13 Maryknoll seminarians joined the Case Aide Program at Boston State Hospital. They worked with 4 women and 9 men, typical of patients found in the back wards of state hospitals. As a result of the seminarians' intervention, most of the Ss developed a warm, trusting relationship, and took on greater responsibilities both in and out of the hospital. It is concluded that the seminarians' preoccupation with self-knowledge was considerably greater than that of Harvard student groups previously tested, and was in keeping with the purpose of the novice year: to decide upon the priesthood as a career. The overall assessment score of the effectiveness of the volunteer as a therapeutic trainee was considerably higher for the seminarian group than for the Harvard student group.—*Journal abstract*.

10035. Glasscote, Raymond M. & Gudeman, Jon E. (American Psychiatric Assn., Joint Information Service, Washington, D.C.) **The staff of the mental health center: A field study.** Washington, D.C.: American Psychiatric Assn., 1969. xv, 207 p. \$6.

10036. Goldberg, Richard T. & Stein, Jane. (Massachusetts Rehabilitation Commission, Boston) **The role of the psychiatric consultant in the state rehabilitation agency.** *Mental Hygiene*, 1970(Oct), Vol. 54(4), 553-558.—A study of the use of psychiatric consultants shows that counselors in a state rehabilitation agency used consultants to evaluate clients' eligibility for services. Once the case was accepted, however, the counselor rarely turned to the consultant for services. It is suggested that this infrequent use may be a result of role conflicts and that roles should be redefined to make the consultant more of a tutor than arbiter of case determination.—*Journal abstract*.

10037. Goode, Dulcie G., Taylor, K. F., & Austin, J. K. **Predicting the performance of occupational therapy students.** *Australian Occupational Therapy Journal*, 1968(Oct), Vol. 15(4), 31-35.—Studied 89 students who had graduated from an occupational therapy school in Australia to identify those aspects which were available at the time of their admission to the school which were associated with later success. Analysis of data indicate that the best predictors of academic performance are the S's total marks in her best 3 subjects in the final matriculation examination and the director's evaluation of her school performance.—S. Knapp.

10038. Guerrin, Robert F. (New York U.) **Attitudinal components of selected occupational groups in tuberculosis hospitals.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1888.

10039. Halleck, Seymour L. (U. Wisconsin, Medical School) **The changing nature of student psychiatry in an era of political awareness.** *American Journal of Psychotherapy*, 1970(Oct), Vol. 24(4), 566-578.—The traditional role of campus psychiatrist is seen as increasingly political. The psychiatrist, being an insti-

tutional arm, is used to negate student militancy and shape conformity. Stresses that the psychiatrist should not become the advocate of specific causes, and should increase involvement in intergroup communication.—W. Vernon.

10040. Kim, Lester E. (Palos Verdes Peninsula Council of Churches, Calif.) **The clergyman's use of mental health resources.** *Pastoral Psychology*, 1970(Apr), Vol. 21(203), 53-56.—Reports on an inservice training program for over 100 community clergy in cooperation with a regional community mental health center. Suggestions for the development of future programs are listed.—O. Strunk.

10041. Light, Donald W. (Brandeis U.) **The socialization and training of psychiatrists.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1906.

10042. Marler, Don C. & Bowen, William T. (Bayshore Mental Health & Mental Retardation Center, Baytown, Tex.) **Psychiatric teams: A self-evaluation.** *Journal of the Fort Logan Mental Health Center*, 1968(Fal), Vol. 5(2), 69-76.—Hypothesized that (a) "claimed membership in a psychiatric team is related to education, authority, or work assignment"; (b) team members are unaware of the structure of their teams; (c) leadership is determined by professional affiliation; (d) "there is uncertainty among team members as to whether they are supervised by their profession or by the team"; and (e) "the individual's freedom to participate in team functions is unrelated to his education, authority, and work assignment." Questionnaires completed by 148 staff members and trainees at a Veterans Administration Hospital, who considered themselves members of psychiatric teams, confirmed hypotheses c and e. Hypothesis a was partially confirmed except for the finding that nursing aides ranked near the bottom on education and near the top on profession of team membership. The importance of the exchange of information to all members is noted.—S. Knapp.

10043. Middleton, Agnes B. & Pothier, Patricia C. (City Hosp., School of Nursing, St. Louis, Mo.) **The nurse in child psychiatry: An overview.** *Nursing Outlook*, 1970(May), Vol. 18(5), 52-56.—Reviews the progress made in establishing the nurse's role in child psychiatric nursing from 1900 until the present. The present status of the psychiatric nurse is examined and suggested roles for the child psychiatric nurse specialist are listed. According to an American Nurses' Association statistical summary, nurses appear to be significantly less involved in outpatient services than other mental health professionals. In hospitals for the mentally ill, the ratio is reversed. Images of the child psychiatric nurse are reviewed. Suggested tools for creating future roles in child psychiatric nursing are research, and the assumption of an aggressive attitude regarding the issues involved. (24 ref.)—B. A. Burkard.

10044. Murphy, Frances. **The occupational therapist in community mental health programmes: An evaluation after six months of community consultation duties.** *Australian Occupational Therapy Journal*, 1969(Apr), Vol. 16(2), 12-15.—Describes the community activities of an occupational therapist in a regional mental health center. Consultative services, teaching roles, and direct services to a nursing home, senior citizens' clubs, general practitioners, and youth programs are briefly described.

10045. Preitz, Clarence H. (Wayne State U.) **Goals and basic units of instruction for treatment media**

courses for the preparation of occupational therapists. *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1597.

10046. Rodríguez Reyes, J., Martínez-Sierra, G. Rodríguez, & Martínez, Eusebio. (Psychiatric Hosp., Oviedo, Spain) **El equipo psiquiátrico**. [The psychiatric team.] *Actas Luso-Españolas de Neurología y Psiquiatría*, 1969(Oct), Vol. 28(4), 331-334.—Proposes that a psychiatric team should be organized on a multidimensional basis, regarding the predominant necessities of psychiatric assistance in a particular area as well as to the customs and traditions of the region. It is advised that the team should operate with practical aims instead of theoretical conceptions. Various team members and their roles are defined: psychiatrist, psychologist, social assistant, psychiatric nurse, social therapist, occupational therapist, and work therapist.—P. Hertzberg.

10047. Tenebaum, Samuel. (Long Island U., Brooklyn) **A discussion of the therapy that resides in a group**. *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 253-255.—Attempts to describe the therapeutic elements observed in the author's group dynamics courses over a number of years. The unique type of talk that develops in a successful group is considered to be the crucial therapeutic agent. Ordinary conversation is depicted as strongly tinged with rivalry and competitiveness, where one's victory means another's defeat, where there is a daily battle to maintain self-esteem, and all men are isolated behind their facades of strength. In the group situation each member strives to become more sensitively aware of his own feelings, to articulate them, and to have the courage to share them. As a corollary to developing these aspects of himself, each member learns how to listen deeply and without evaluation and judgment to others. "In good groups, communication centers around grief, hurt, guilt, and despair." Through sharing these emotions, the individuals gain strength and courage and learn how to develop deeper relationships.—S. Knapp.

10048. Whitlock, Glenn E. (Johnston Coll., U. Redlands) **Pastoral psychology and preventive psychiatry**. *Pastoral Psychology*, 1970(Apr), Vol. 21(203), 9-13.—Pastors trained in the understanding of the psychodynamics of human behavior will be sensitive to the danger signals and the psychological "tilts" which may be observed in individuals and families in varying degrees of emotional stress. The pastor often has the first opportunity to work with persons in crisis and is therefore in an ideal position to practice preventive psychiatry and pastoral care.—O. Strunk.

10049. Whittaker, James K. (U. Washington) **Training child care staff: Pitfalls and promises**. *Mental Hygiene*, 1970(Oct), Vol. 54(4), 516-519.—Outlines procedures for the training of child care workers, including life space supervision in which the supervisor demonstrates techniques, 1-to-1 supervision in an office setting, and group supervision. Senior child care workers should serve as supervisors for the staff, and training should be given to all staff members, whether or not they have official contacts with the children, if the institutional milieu is to be thoroughly therapeutic.—A. M. Cawley.

PSYCHOTHERAPY & ANALYSIS

10050. Appelbaum, Stephen A., Coyne, Lolafaye, & Siegal, Richard S. (Menninger Memorial Hosp., Topeka, Kan.) **Routes to change in IQ during and after long**

term psychotherapy. *Journal of Nervous & Mental Disease*, 1970(Nov), Vol. 151(5), 310-315.—Having previously demonstrated that IQs tend to go upward during and after long-term psychotherapy, personality changes which accompanied these are reported. Of 24 variables examined, 10 were highly correlated with change in IQ. Of 26 patients given a battery of tests before and after psychotherapy and 2 yr. after termination. These variables included a mixture of structural and motivational characteristics consistent with generally supportive-strengthening treatments. Alongside the group trends, individual categories of change accompanying raising and lowering of IQ are specified. These suggest that a wide variety of individual and idiosyncratic patterns may influence change in IQ.—*Journal abstract*.

10051. Bannister, D. (Bexley Hosp., Danford Heath, England) **Clinical psychology and psychotherapy**. *Bulletin of the British Psychological Society*, 1969(Oct), Vol. 22(77), 299-301.—In Britain, clinical psychologists have remained aloof from psychotherapy and have been reluctant to discuss the question. 2 issues are seen as having inhibited clinical psychologists in approaching the question of undertaking psychological treatment—"science" and "medical." The various aspects of these issues are discussed.—V. S. Sexton.

10052. Bonstedt, Theodor. (Rollman Psychiatric Inst., Cincinnati, O.) **Crisis intervention or early access brief therapy?** *Diseases of the Nervous System*, 1970(Nov), Vol. 31(11), 783-787.—Compares crisis intervention and early access brief therapy approaches, as they are conceptualized at present. While they have an area of overlap in terms of rapid application, focus on environment and current events, and needed sensitivity of the clinician, they also show important differences in terms of the underlying frameworks of reference. Crisis intervention is built upon crisis theory, emphasizing the environment, with its more optimistic view of the role of crises in individual lives, and opportunity to utilize these insights in anticipatory guidance through other professionals. Early access brief therapies are built upon the modifications of ego psychology, with some attention toward various aspects of social psychiatry.—*Journal summary*.

10053. Burgess, Ann & Lazare, Aaron. **Dual therapy by nurse and psychiatrist**. *American Journal of Nursing*, 1970(Jun), Vol. 70(6), 1292-1298.—Describes "the roles of a nurse therapist and psychiatrist-administrator in the treatment of a severely depressed 18-yr-old boy." The patient's behavior seemed aimed at disrupting the relationship between the nurse who was his therapist and the psychiatrist. In time, he showed signs of identifying with male authority. Minor crises which the patient created and testing continued until the administrator erred in his handling of the patient. The crises ceased. Only with a "father" who was approachable could he identify with and resolve his problem. "The combinations of male and female therapists served to defend against both homosexual and heterosexual panic, permitted recreation of family themes, and allowed for diffusion of overwhelming hostility."—B. A. Burkard.

10054. Dodd, Jack. (U.S. Naval Hosp., Great Lakes, Ill.) **A retrospective analysis of variables related to duration of treatment in a university psychiatric clinic**. *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 75-84.—Performed a statistical analysis to ascertain variables that would differentiate patients who

terminated before and after a median of 4 interviews. 169 consecutive new outpatients accepted for treatment during the 1st 3 mo. of 1967 at a university psychiatric clinic served as Ss. The variables which could be cross-validated in a sample consisting of 57 patients taken from the succeeding month were: (a) Negro patients, (b) patients seen by medical students, and (c) patients receiving no drug prescriptions who tended to terminate early without their therapist's consent. By using the treatment variables b and c, 81% of the cross-validation group was correctly classified. The literature concerning studies of the length of outpatient psychiatric treatment is reviewed and discussed in reference to the findings. (38 ref.)—*Journal abstract.*

10055. **Donofrio, Anthony F.** (Catholic Charities Mental Health Center, Bay Shore, N.Y.) **Child psychotherapy: Help or hindrance?** *Mental Hygiene*, 1970(Oct), Vol. 54(4), 510-515.—Discusses the diagnostic pitfalls psychologists encounter in dealing with children. 3 categories of problems are suggested, arising from (a) deprivation of basic psychological need, (b) constitutional and developmental factors, and (c) minimal neurological damage or dysfunction. Alternatives to child psychotherapy which include working with parents and other significant adults in the child's life are proposed.—*Journal abstract.*

10056. **Erickson, Gerald D. & Gustafson, Gary J.** (Marshfield Clinic, Wis.) **Controlling auditory hallucinations.** *Hospital & Community Psychiatry*, 1968(Oct), Vol. 19(10), 327-329.—Discusses the "pathological communication and breach of interpersonal relationships" that result from a patient's perception of voices. "The patient projects an inner experience to the external world, and then experiences it as if it were coming from without," thereby interacting with himself and reducing his contacts with others. 2 ways of bringing auditory hallucinations under control are given: (a) working with the healthy parts of the patient's personality, and leaving him in control, and (b) working with the hallucinations and persuading the patient to control them. 2 cases illustrating the use of the latter technique are described including that of a 43-yr-old woman who controlled her auditory hallucinations in 2 days after a simple demonstration of techniques.—*B. A. Burkard.*

10057. **Faragalla, F. F. & Flach, F. F.** (New York Hosp., Cornell Medical Center, N.Y.) **Studies of mineral metabolism in mental depression: I. The effects of imipramine and electric convulsive therapy on calcium balance and kinetics.** *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 120-129.—Studied calcium metabolism in 9 severely depressed patients before and after ECT or administration of a course of imipramine. Treatment with ECT in all Ss and with imipramine in most was associated with improved calcium retention manifested by a shift toward a positive balance. In most Ss this resulted from increase in net absorption from the gut and decreased urinary calcium excretion. Calcium kinetic studies indicate that the increased retention due to ECT was caused by decreased bone resorption. In 3 out of 4 Ss treated with imipramine, the increased calcium retention was associated with increased bone formation, which was marked in 2 Ss. The possible use of imipramine for treating osteopenia of unknown origin where bone formation is low is suggested. The decrease in serum calcium concentration after treatment suggests that this may lead to a decreased release of biogenic amines from

the brain, thus alleviating depression. (28 ref.)—*Journal abstract.*

10058. **Field, Peter B.** (Veterans Administration Hosp., Brooklyn, N.Y.) **Preventing crying through desensitization.** *American Journal of Clinical Hypnosis*, 1970(Oct), Vol. 13(2), 134-136.—Reports the systematic desensitization and hypnotherapy in an unusual problem, the prevention of crying during a wedding ceremony.—*M. V. Kline.*

10059. **Gavanski, M.** (750 W. Broadway, Vancouver, British Columbia, Canada) **Treatment of non-retentive secondary encopresis with imipramine and psychotherapy.** *Canadian Medical Association Journal*, 1971(Jan), Vol. 104(1), 46-48.

10060. **Gendlin, Eugene T. & Olsen, Linda.** (U. Chicago) **The use of imagery in experiential focusing.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 221-223.—Describes a procedure developed as an innovation in experiential focusing. The usual procedure of experiential focusing consists of 3 steps: (a) feeling the totality of the problem; (b) allowing a specific feeling to peak from this; and (c) holding the feeling until a release, an opening up, an experiential shift, occurs. Difficulties are sometimes encountered between a and b. The innovation entails letting an image form after a, sensing how it feels, and focusing on that feeling. Typically, the image and feeling remain stable and refuse to change until the S comes to know the feeling it gives, at which point the release occurs and a change of image. Opening up of the specific feeling usually occurs when words arise from it. This technique has been found useful in Ss who obtain images easily.—*S. Knapp.*

10061. **Gurney, Clair; Roth, Martin; Kerr, T. A., & Schapira, Kurt.** (U. Newcastle upon Tyne, Psychological Medicine Research Unit, England) **The bearing of treatment on the classification of the affective disorders.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 251-255.—Classified 154 patients as anxiety states or depressive illnesses independently of the clinicians in charge of the cases. Similarly, the therapeutic response of 126 Ss was assessed at discharge and 6 mo. later by an investigator unaware of the original diagnosis. Physical treatment involved ECT, sedatives or tranquilizers, MAO inhibitors, and tricyclic antidepressants. Data indicate that differences in (a) frequency of prescription of ECT, (b) variety of drug used, and (c) the response to shock and antidepressant drugs correlated with diagnosis. "These findings provide some validation for the broad subdivision of affective disorders into anxiety states and depressive illness."—*R. L. Sulzer.*

10062. **Harford, Thomas; Blane, Howard T., & Chafetz, Morris E.** (Massachusetts General Hosp., Boston) **Language predictability and psychiatric interviews.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 725-726.—Deleted words from 36 samples of patient speech obtained from initial and terminal psychiatric interviews and submitted the samples to 75 introductory psychology students for completion. Findings indicate that samples from the end of the interview are less predictable than those obtained from the beginning. The facts that change occurs within the context of a single interview, and correlates with ratings of potential for psychotherapy made by the interviewers, indicate that the cloze procedure is both sensitive and psychologically relevant to the psychotherapeutic process.—*Journal abstract.*

10063. **Kroth, Jerome A.** (Florida State U.) **The**

analytic couch and response to free association. *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 206-208.—Examined whether the supine position on a couch facilitates free associative response. 48 female undergraduates were divided into 2 treatment conditions, sitting or prone, in a room by themselves. E, in another room with a 1-way mirror and communications system, instructed Ss to relax and say whatever came into their minds. After 20 min. Ss estimated the amount of time they had been in the room. The main dependent variable was Bordin's Free Association Scale, an O-rated scale containing a 6-point general scale and 3 5-point scales: involvement, freedom, and spontaneity. The 2nd dependent measure was the estimate of time spent in free association, and the 3rd consisted of the total seconds of silence in the session. The general scale, freedom, and spontaneity reached significance, indicating that primary process characteristics are more dominant in the supine position, however, the lack of significant differences on the other measures indicates that a reconceptualization of emotionality in the theory of free association is needed.—S. Knapp.

10064. Luborsky, Lester, et al. (U. Pennsylvania) **Factors influencing the outcome of psychotherapy: A review of quantitative research.** *Psychological Bulletin*, 1971(Mar), Vol. 75(3), 145-185.—Reviewed 166 studies of predictions of outcome of individual psychotherapy with adult patients. Predictors are classed as patient, therapist, or treatment factors; the number of predictors which were significant vs. nonsignificant are tallied. By far, the largest number deals with patient factors—relatively few with therapist or treatment. Those patient factors which were most often significantly associated with improvement are (a) psychological health or adequacy of personality functioning, (b) absence of schizoid trends, (c) motivation, (d) intelligence, (e) anxiety, (f) educational and social assets, and (g) experiencing (rated from early sessions). Therapist factors are (a) experience, (b) attitude and interest patterns, (c) empathy, and (d) similarity of patient and therapist. Treatment factors revealed 1 main trend: the number of sessions. Methodologies are evaluated, and it is suggested that the main predictors be cross-validated. (7 p. ref.)—*Journal abstract*.

10065. Mintz, Jim; Luborsky, Lester, & Auerbach, Arthur H. (U. Pennsylvania) **Dimensions of psychotherapy: A factor-analytic study of ratings of psychotherapy sessions.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 106-120.—Rated tape recordings of 60 early sessions of psychoanalytically oriented therapy on 110 process variables. The ratings of 3 Os were clustered and factor analyzed. 4 factors were rotated and interpreted as (a) patient health vs. distress, (b) optimal empathic relationship, (c) active directive mode, and (d) interpretive mode with receptive patient. For 27 of the 30 patients, outcome ratings were obtained from the therapist (patient improvement and success + patient satisfaction). Patient improvement was not predicted by any process ratings. Success + patient satisfaction, on which women scored higher than men, was predicted by patient health vs. distress. Patients rated in early sessions as healthy and low in distress had better prognoses. Optimal empathic relationship qualities related positively to success in therapies low in directive mode, but for relatively directive therapies, this relationship was negative. (31 ref.)—*Journal abstract*.

10066. Pancheri, Lucia & Pancheri, Paolo. (U. Roma,

Italy) **Problemi in tema di validazione scientifica della psicoanalisi.** [The problem on the subject of the scientific validity of psychoanalysis.] *Rivista di Psichiatria*, 1969(Nov), Vol. 4(6), 421-462.—Studied the problem of the scientific validity of psychoanalysis by analyzing the problems of therapeutic results and by verifying experiments. It is concluded that today psychoanalysis has 2 possibilities: (a) To defend the right of autonomous discipline, by instituting its own method, its own system for verification, and its own parameter for therapeutic evaluation. "The process of analytical cure can be described... as an increasing effort to put psychic processes into verbal terms which in their initial essence are extraneous to words." And (b) to evaluate the method on the basis of traditional therapeutic concepts and confront the examination of their assumptions using the experimental method. (English summary) (16 p. ref.)—A. M. Farfaglia.

10067. Schofield, William. (U. Minnesota) **Psychotherapy: The unknown versus the untold.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 9-11.—Discusses the article by N. L. Mintz (see PA, Vol. 45: Issue 5) on the role of fees and fee-charging practices in psychotherapy. Texts by K. Menninger and L. R. Wolberg and the American Psychological Association survey on fee schedules are cited for commentary on fee attitudes of psychiatrists and psychologists. It is concluded that shame over the sale of friendship may indeed play a crucial part in the reticence of therapists to discuss fees. The role which growing comprehensive health insurance may play in removing this element of secrecy is noted.—S. Knapp.

10068. Schwartz, Carol C. (Yale U.) **Schools of thought in psychoanalysis: A study in the sociology of knowledge.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1390.

10069. Shapiro, David L. (Center for Forensic Psychiatry, Ann Arbor, Mich.) **The significance of the visual image in psychotherapy.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 209-212.—Discusses 2 schools of thought on the role of imagery: (a) imagery as a defense which moves away from or screens and still gratifies indirectly the underlying impulse; and (b) imagery as a direct representation of the unconscious, an expression of the impulse itself. It is concluded that "given certain structural conditions, the visual image tends to conceal, and, given others, it reveals, what the important issues in the patient's life are." (19 ref.)—S. Knapp.

10070. Tamburro, Giuseppe & Dello Russo, Giovanni. **III Convegno sul tema: "L'impotenza sessuale". Alcune considerazioni sul trattamento psicoterapeutico dell'impotenza sessuale.** [3rd annual convention on the subject: "Sexual impotence": Some considerations on psychotherapeutic treatment of sexual impotence.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 334-340.—Recorded subjective observations of the various types of psychotherapeutic intervention in sexual impotence in the male. Psychotherapeutic intervention refers to psychotherapy of analytical inspiration. This type of psychotherapy is beneficial because impotence is but a symptom of a much more global illness. 2 cases of 21-yr-old and 26-yr-old Ss were studied. Both cases differed greatly in dynamics and the type of impotence (sudden and early), but they had certain elements in common, e.g., good intellectual capacity and possibility of introspection along with other positive elements. It is

concluded that the most important thing in choosing the type of psychotherapeutic intervention, whether brief or prolonged, depends on the therapist's judgment of the ability of the patient's personality to compromise.—A. M. Farfaglia.

Therapeutic Process

10071. Eitzen, Lando. (Jacksonville State Hosp., Ill.) **Confrontation action psychotherapy with religious-moral values.** *Journal of Pastoral Care*, 1969(Mar), Vol. 23(1), 26-35.—Describes a pilot research project at a state hospital in which a clinical psychologist and a clergyman teamed up for group and individual psychotherapy. In this way, immediate therapeutic attention could be given to religious and moral concerns. This approach included having the patient relate his religious views and challenging him to reflect on the gap between what he claimed to believe and his actual behavior. Several illustrative examples are given.—M. West.

10072. Errera, Paul. (Yale U., Medical School) **Common-sense approaches to confidentiality.** *Hospital & Community Psychiatry*, 1968(Nov), Vol. 19(11), 347-349.—Discusses the question of confidentiality in the psychiatrist-patient relationship. "The refusal of a psychiatrist to divulge any information, especially in the face of a written release from the patient, may well be interpreted as a negative commentary about the patient rather than as an ethical act." The psychiatrist realizes that in certain situations authorized disclosures are appropriate. Guidelines for dealing with requests for information are included.—B. A. Burkard.

10073. Mendel, Werner M. (U. Southern California, Medical School) **Authority: its nature and use in the therapeutic relationship.** *Hospital & Community Psychiatry*, 1970(Nov), Vol. 21(11), 367-370.—This theoretical article discusses the development of maturity and independence and the role of authority in psychotherapeutic relationships. In view of current social upheavals, authority is seen as a therapeutic tool for the disorganized patient but as arousing some discomfort in the therapist who must assume authority. Practical ways for helping the patient to internalize authority are discussed. As a therapeutic agent, authority has both dangers and side effects.—R. B. Sivley.

10074. Mintz, Norbett L. (U.S. Public Health Service, Indian Hosp., Tuba City, Ariz.) **Patient fees and psychotherapeutic transactions.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 1-8.—Notes that little discussion about fees has appeared in the literature on therapeutic practice, technique, or training. 3 published questionnaire studies concerning basic therapeutic procedures reveal information about therapists' orientations toward fees. While therapists generally are alert to interpret patient remarks and concerns about fees, they often are defensive and doctrinaire about their own attitudes regarding finances. Economic aspects of human interaction and of psychotherapeutic transaction partly have replaced sexual ones as areas which badly need elucidation. Questions are raised about the rationale for various financial practices, and some historical, cultural, and personal factors bearing on the economic aspects of psychotherapy suggested. 3 case examples highlight some effects of these factors on the therapy situation. (20 ref.)—*Journal abstract*.

10075. Mitchell, Kevin M. & Berenson, Bernard G. (U. Arkansas, Rehabilitation Research & Training

Center) **Differential use of confrontation by high and low facilitative therapists.** *Journal of Nervous & Mental Disease*, 1970(Nov), Vol. 151(5), 303-309.—Rated the 1st psychotherapy interviews of 56 psychotherapists on accurate empathy, positive regard or warmth, genuineness or openness, and concreteness. Therapists included psychiatrists, psychologists, social workers, and advanced level graduate students in clinical and counseling psychology who had 3-15 yr. experience. Based on research suggesting that certain minimal levels of these facilitative conditions must be offered before patient improvement is likely, 13 therapists were designated as high and 43 as low facilitative. A 2nd pair of independent raters noted the frequency and type of 5 different kinds of therapist-initiated confrontation. Analyses of data indicate that the high facilitative therapists offered significantly more confrontations based on attempts to understand and clarify the therapist-patient ongoing relationship. They were also significantly more likely to use confrontations based on patients' strengths or resources, while low facilitative therapists were significantly more likely to use confrontations based on patients' weaknesses or pathology. Finally, an attempt was made to pinpoint specific in-therapy behaviors of the high and low facilitative therapists which would seem to lead directly to patient improvement or deterioration.—*Journal abstract*.

10076. Perry, Cereta E. (Michigan State U.) **Client internalizing and/or client externalizing consistency or change: its effect on therapeutic process and outcome.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1020.

10077. Pope, Benjamin, et al. (Sheppard & Enoch Pratt Hosp., Towson, Md.) **Interviewer specificity in seminaturalistic interviews.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 152.—Attempted to replicate earlier findings by B. Pope and A. W. Siegman (see PA, Vol. 39:13386, and Vol. 40:509) that there is an inverse relationship between interviewer specificity and both interviewee productivity and uncertainty, through the use of more naturalistic interviewers. 24 18-40 yr. old psychiatric inpatients were interviewed 3 times in a low specificity, high specificity, and an uncontrolled interview. Previous findings were supported.—S. Knapp.

10078. Sandler, J., Dare, C., & Holder, A. (Inst. of Psychiatry, London, England) **Basic psychoanalytic concepts: VIII. Special forms of transference.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 561-568.—Reviews the literature that has grown up and around special forms of transference (erotic transference, erotized transference, transference psychosis, and delusional transference). The phenomena described are generally regarded as some form of repetition of the past but with qualities so grossly inappropriate as to warrant special designation. (50 ref.)—R. L. Sulzer.

10079. Sandler, J., Holder, A., & Dare, C. (Inst. of Psychiatry, London, England) **Basic psychoanalytic concepts: VII. The negative therapeutic reaction.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 431-435.—Concludes that the term "negative therapeutic reaction" is used (a) when "worsening follows an awareness by the patient or expression by the therapist of improvement," (b) when "guilt engendered by the atmosphere of encouragement, optimism, or approval," may promote the return of symptoms, (c) "to describe a character reaction of 'negativism' or contrariness that

becomes manifested in a clinical setting as opposition to, or failure to accept benefit from, treatment," and (d) "to include many other forms of resistance to the process of psychoanalytic treatment." (20 ref.)—*R. L. Sulzer.*

10080. **Scott, Robert W. & Kemp, David E.** (Veterans Administration Hosp., Coral Gables, Fla.) **The A-B scale and empathy, warmth, genuineness, and depth of self-exploration.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 49-51.—Studied initial interviews conducted by 25 senior medical students with 25 neurotic outpatients. There were no significant relationships between the therapists' A-B scale scores and their empathy, warmth, and genuineness. B-type therapists did elicit greater depth of exploration, a result consonant with existing research. Findings suggest that these 2 sets of variables—the A-B scale and empathy, warmth, and genuineness—are independent sources of variance in therapeutic outcome. The A-B scale offers the potential of leading to the discovery of a new set of determinants of psychotherapeutic success.—*Journal abstract.*

10081. **Sherman, Alan R.** (Yale U.) **Therapeutic factors in the behavioral treatment of anxiety.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3876-3877.

10082. **Stein, Conrad.** **Le jugement du psychanalyste.** [The judgment of the psychoanalyst.] *Interprétation*, 1968(Jan), Vol. 2(1), 15-31.—During resistance in psychoanalysis, granted that the patient views the analyst as a judge, the latter's spoken words are received by the patient as a judgment, with the result that the analyst's "benevolent neutrality" remains illusory. As judgment, the analyst's remarks establish the patient as the object of desire of the analyst; as preaching, they further establishment of the patient's role of subjection; by their metaphoric effect they are the agent of the patient's enjoyment. Thus triply significant, the analyst's remarks (a) imply the guilt of the patient as the sole reference possible to the analyst's desire; (b) subject the patient to the idea of his past offense; and (c) are received by the patient as a condemnation of the erotic satisfaction they confer (because of a link between the idea of his offense and his enjoyment of the remarks establishing his offense).—*T. N. Webster.*

10083. **Watson, J. P.** (Maudsley Hosp., London, England) **A measure of therapist-patient understanding.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 319-321.—Examined the degree of understanding existing between a psychiatrist and a patient over an 8-mo period by comparing repertory grids prepared by both simultaneously. The patient, a 31-yr-old bachelor, "completed an identical grid on 4 occasions, and on each occasion the doctor supplied a grid of guesses of the patient's ratings." The S proved not to be very changeable, and the high accuracy with which the psychiatrist predicted his behavior suggests that considerable understanding existed.—*R. L. Sulzer.*

Group Therapy

10084. **Ackerman, Nathan W. (Ed.)** (Family Inst., New York, N.Y.) **Family therapy in transition.** Boston, Mass.: Little, Brown, 1970. xii, 346 p. \$10.

10085. **Blakeney, P. M. & Creson, D. L.** (U. Texas, Medical Branch, Galveston) **Status and stability in an adolescent milieu patient group.** *Diseases of the Nervous System*, 1970(Nov), Vol. 31(11), 756-762.—Reports

preliminary studies of group dynamics in an adolescent treatment unit. Sociometric questionnaires were administered to 23 13-19 yr. old Ss, and 4 mo. later, to 13 Ss of approximately the same age (5 of these Ss being included in both phases of the study). Sociograms were obtained and are illustrated. Factors determining group structure include (a) length of time Ss had been in the program, (b) quality of Ss' adaptive responses, and (c) similarity between attitudes and values held by Ss and by the staff. The importance of group interactions for improvement of individual adjustment is stressed.—*P. McMillan.*

10086. **Howells, J. G.** (Inst. of Family Psychiatry, Ipswich & Suffolk Hosp., England) **Fallacies in child care: III. That children are brought up by parents.** *Acta Paedopsychiatrica*, 1970(Apr), Vol. 37(4-5), 90-100.—Western culture tends to overlook the fact that children are brought up by the whole family, not by the mother alone. The family, nuclear or extended, has a universal distribution; its development in 1 variant or another depends on the needs of its social background, rather than on historical evolution. Family psychiatry, stressing the family unit, aims to understand and improve the group psyche of the family. 3 techniques are discussed: family psychotherapy; vector therapy, or repatterning the emotional forces of family interaction; the salutiferous community, or reshaping the emotional strata of society for emotional self-improvement. The individual is not nurtured in a vacuum, but in a group.—*G. Rubin-Rabson.*

10087. **Khan, A. U.** (Children's Memorial Hosp., Chicago, Ill.) **A therapeutic technique based on the interpersonal theory of psychiatry and the family dynamics.** *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 226-240.—Attempts to apply the interpersonal theory of psychiatry and the knowledge of the family dynamics in the treatment of children and their parents. Various behavior problems of the children are conceptualized as the result of abnormal reciprocal interaction between the child and the parents. The therapeutic technique is designed to bring about immediate interruption in the cycle of this abnormal interaction. Although some attempt is made to understand the intrapersonal problems of each of the parents and the child, the treatment is carried out mainly on the interpersonal level. Once the interpersonal problems are lessened, the parents as well as the children show more willingness and motivation to work on their individual problems. In a large number of cases, however, treatment on the intrapersonal problems does not appear necessary. It seems as if after this therapy the capacity to resolve the internal conflicts is greatly enhanced.—*Journal summary.*

10088. **Kilpatrick, Allie C.** (Ft. Logan Mental Health Center, Denver, Colo.) **Conjoint family therapy with geriatric patients.** *Journal of the Fort Logan Mental Health Center*, 1968(Spr), Vol. 5(1), 29-35.—Describes the use of conjoint family therapy as a treatment for geriatric patients in a mental health center. Treatment of the family unit was problem and relationship oriented, and techniques, e.g., role-playing and environmental manipulation, varied considerably in each family unit. 2 case examples are presented: a 72-yr-old woman subject to periodic psychotic breaks, and an 83-yr-old widow with withdrawn, passive aggressive behavior. It was found that conjoint therapy seemed to lessen the need for continuing relationship with the center after the initial crisis had been resolved.—*Journal summary.*

10089. Lauer, Roger & Goldfield, Michael. (National Inst. of Mental Health, Adelphi, Md.) **Creative writing in group therapy.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 248-252.—Describes the use of creative writing in group therapy in an inpatient psychiatric ward, a youth drug study unit, and a psychiatric outpatient clinic. Following exercises, e.g., completing a sentence, the group members picked a common topic about which to write. Each piece was read aloud and discussed. Intellectualization and value judgments were discouraged in the discussions. Excerpts from the writings of 3 patients and a staff member are presented. It is concluded that creative writing (a) facilitated self-understanding, providing an entryway to the unconscious; (b) facilitated group interaction and group discussion; (c) elevated self-esteem; and (d) seemed to enhance other forms of psychotherapy. Creative writing also provided useful training to staff members, concrete records, and clarified the dynamics of the groups, patients, and leaders. (16 ref.)—S. Knapp.

10090. Mayer, Loris & Isbister, Clair. (Margaret Reid Hosp., Asthma Section, St. Ives, New South Wales, Australia) **Report on group therapy for mothers of children with intractable asthma.** *Medical Journal of Australia*, 1970(May), Vol. 1(18), 887-889.—Briefly presents and evaluates the content of the group sessions. The sharing of problems and the support offered by members in the group situation seem to be of value. Group therapy is seen in this context as an alternative to individual therapy, as increasing numbers of patients will preclude the offering of individual therapy in every instance.—*Journal abstract*.

10091. Pavan, Luigi; Agius, Sergio, & Baggio, Marco. (U. Padova, Italy) **Su di alcuni aspetti istituzionali e dinamici di una psicoterapia di gruppo in un reparto a breve degenza.** [On some institutional and dynamic aspects of group therapy in short-term hospitalization.] *Rivista di Psichiatria*, 1969(Nov), Vol. 4(6), 403-420.—Described the authors' personal experiences over the course of 1 yr. in a short-term clinic where they attempted to change the traditional relationship of "doctor-mental patient"; it is considered unproductive and antitherapeutic. "The main interest of psychiatrists continues to center around human relationships." In this 29 bed clinic, the average term was 30-40 days. 1-hr meetings were held biweekly and were attended by Ss, 2 doctors, and 1 nurse. All could participate freely on any subject and could come and go at will. The doctors were recognized as persons, not curers. Examples are given of various Ss in group therapy sessions. It is concluded that because in mental diseases a block in communication (institutional neurosis) is often present, this type of group therapy fosters a real dialog. The S can come out of his isolation and apathy. Everyone, Ss and personnel, is conscious of an I-others relationship. (English summary) (29 ref.)—A. M. Farfaglia.

10092. Sturm, Israel E. (Veterans Administration Hosp., Northport, N.Y.) **A behavioral outline of psychodrama.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 245-247.—Describes 5 of the more important psychodramatic techniques in a loose learning theory framework: (a) warm-up, in which the director elicits from Ss a large number of cues for positive reinforcement and discourages cues for punishment; (b) problem presentation, which involves the director's rewarding the Ss' revelation of personal problems and the group's selection of a focal problem;

(c) self-presentation, wherein S describes the setting and enacts, directly or descriptively all roles involved, and the director analyzes covertly the cue-response-reinforcement systems represented; (d) role-playing, where the S learns important behaviors by assimilating all or parts of the roles of real or symbolic models; and (e) group participation, where all Ss share their experiences of the session and what they have learned. It is concluded that psychotherapists of any background may find occasional use of psychodrama useful in epitomizing crucial problems.—S. Knapp.

10093. Volterra, Vittorio & Molinari, Sergio. **Il caratteropatologico in un gruppo misto aperto di discussione.** [The patient with character disorder in a mixed group open to discussion.] *Rivista di Psichiatria*, 1968(Jul), Vol. 3(4), 377-381.—Described 1-1½ hr. meetings held twice a wk. at a neuropsychiatric clinic and were attended by approximately 30-35 people including patients, doctors, and nurses. The patients may freely act-out and discuss anything they wish. Ss with character disorders accepted these meetings enthusiastically. They revealed their exaggerated egocentricity, trying to attract attention and sympathy from the others by protesting (bad food, dirty bathrooms, few permissions). They were aggressive toward the doctors and nurses. In the group, their attitude resulted in a wider range of expression than in other types of treatment. In the group, Ss were forced to be in contact with the sufferings and problems of other types of Ss. They had the freedom to criticize but had to accept criticism, too. From the reactions of the others, S could test the validity of his own actions and begin to develop a socially valid way of thinking.—A. M. Farfaglia.

10094. Watson, J. P. (Maudsley Hosp., London, England) **A repertory grid method of studying groups.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 309-318.—Describes a modified repertory grid method which provides information about interpersonal relationships in a group, psychological features of individual group members, and changes in persons having group therapy. In this technique the raters are also the elements. All the grids obtained on any test occasion in a group are prepared simultaneously, and all have the same form. Thus the raters in a group use 1 scoring system to rate the same people in terms of an unchanging set of constructs. Results of the use of the technique in 6 outpatient psychotherapeutic groups, each containing 2 therapists and 5-8 patients, are described.—R. L. Sulzer.

10095. Wolman, Carol. (3924 Delancey St., Philadelphia, Pa.) **Group therapy in two languages, English and Navajo.** *American Journal of Psychotherapy*, 1970(Oct), Vol. 24(4), 677-685.—Reviews those social factors which lead many Navajo reservation Indians to alcohol abuse. Group therapy sessions are described where the Navajo language was employed and translated to the therapist by an interpreter. Guidelines for future groups of this nature are suggested.—W. Vernon.

Behavior & Conditioning Therapy

10096. Abel, Gene G., Levis, Donald J., & Clancy, John. (State Psychopathic Hosp., Iowa City, Ia.) **Aversion therapy applied to taped sequences of deviant behavior in exhibitionism and other sexual deviations: A preliminary report.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 59-

66.—In 3 cases of exhibitionism, 2 of transvestism and 1 of masochism, tapes were made involving descriptions of each S's individual deviant behavior divided into 3 sequential segments. 5 of the 6 Ss were placed on a schedule on which, at 1st, the final segment of the tape was followed by shock, at later sessions the 2nd segment, and ultimately the 1st. At each session the shocked tape runs were followed by runs in which the S avoided shock by verbalizing normal sexual behavior in the place of the shocked segment. The 6th S was given shocks out of relation to taped material, as a control. Treatment was evaluated by measuring penile responses to sexually deviant and nondeviant tapes, and by clinical reports. In experimental Ss there was reduction of erectile responses to deviant tapes, but sustained responses to nondeviant tapes. These Ss reported weaker deviant responses, less frequent deviant behavior, and fewer symptoms of psychopathology in general.—*Journal abstract.*

10097. Bandura, Albert. (Stanford U.) **Principles of behavior modification.** New York, N.Y.: Holt, Rinehart, & Winston, 1969. ix, 677 p. \$9.95.

10098. Barrett, Curtis L. (U. Louisville, Medical School, Child Psychiatry Research Center) **"Runaway imagery" in systematic desensitization therapy and implosive therapy.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 233-235.—Reports and examines negative or unpleasant experiences with "runaway imagery" encountered in a study comparing systematic desensitization therapy and implosive therapy in Ss with a fear of harmless snakes. 2 instances were noted in 2 out of 12 Ss, both females, in the desensitization study where after visualizing a scene from the hierarchy, the scene became more vivid and/or changed, and switching off the image was very difficult. 2 serious instances with female undergraduates in the implosive therapy study are noted where vivid and compelling images occurred between sessions.—S. Knapp.

10099. Budzynski, Thomas; Stoyva, Johann, & Adler, Charles. (U. Colorado, Medical Center, Denver) **Feed-back-induced muscle relaxation: Application to tension headache.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Sep), Vol. 1(3), 205-211.—Describes a technique for producing deep muscle relaxation by means of an information feedback technique: Ss hear a tone with a frequency proportional to the EMG level of the muscle being monitored. The treatment of 5 Ss with tension headache is described. With this "bio-feedback" training in relaxation, Ss learned to produce low frontalis EMG levels and showed subsequent reductions in headache activity over a 5-wk period.—*Journal abstract.*

10100. Coleman, Richard & Toth, Emil. (U. North Carolina) **The adaptation of commercially available radio control equipment to behavior therapy.** *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 221-222.—Describes a small, battery operated transmitter and counter suitable for public classrooms which can be used in conditioning procedures.

10101. De Moor, W. (U. Nijmegen, Psychological Lab., Netherlands) **Systematic desensitization versus prolonged high intensity stimulation (flooding).** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 45-52.—Divided 27 Ss with severe fears of harmless snakes into 3 matched groups of 9. 1 was a control group, and the 2 others received, respectively, 5 sessions of systematic desensitization and 5 of flooding. Experimental groups both showed signif-

icantly more change than the control. The most important difference between the 2 experimental groups was that whereas recovery was stable in those who had received systematic desensitization, 3 of those who had improved with flooding therapy were found to have relapsed at the follow-up test 6 mo. later. (29 ref.)—*Journal abstract.*

10102. Eysenck, H. J. (U. London, Inst. of Psychiatry, England) **Behavior therapy and its critics.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 5-15.—Groups criticisms of behavior therapy under 3 main headings: (a) Modern learning theory is not sufficiently advanced and specific to make application to the treatment of mental disorders possible. (b) Theories such as those of Wolpe, Skinner and others do not provide a way of applying learning theory to these problems. (c) The results of behavior therapy have not been shown to be superior to those achieved with more orthodox methods. It is concluded that these criticisms are either untrue, irrelevant, or based on misconceptions. (29 ref.)—*Journal abstract.*

10103. Fazio, Anthony F. (U. Wisconsin, Milwaukee) **Implosive therapy in the treatment of a phobic disorder.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 228-232.—Illustrates the techniques of implosive therapy (IT) in the treatment of a 20-yr-old female with an injection phobia. S's MMPI scores were high on 3 scales: Hs 82, Hy 73, and Ma 70. IT treatment consisted primarily of vivid descriptions of scenes related to the S's fears, exposure to actual items (e.g., darts), and homework assignments (e.g., imagining making an appointment for a shot, and swabbing her arm in alcohol, and imagining the shot). The spontaneous recall of experiences following the cue scenes led to the hypothesis "that forced exposure to such cues extinguishes conditioned anxiety thus allowing successive (i.e., older) memories to be recalled." Such memories revealed the S's extended history of hysterical escape-avoidance learning. By Session 23 the S was able to make an appointment and have a blood test without panic or fainting. MMPI scores had decreased: Hs 52, Hy 61, and Ma 63.—S. Knapp.

10104. Furst, J. B. & Cooper, A. (Albert Einstein Coll. of Medicine, Yeshiva U.) **Combined use of imaginal and interoceptive stimuli, in desensitizing fear of heart attacks.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 87-89.—Certain phobic responses are triggered by combinations of exteroceptive and interoceptive stimuli. The latter should be included in the deconditionary operations. A 44-yr-old female with cardiac neurosis was successfully desensitized by using imaginal stimuli and the graded induction of the feared physical sensations of breathlessness, heart pounding pains in the chest and left arm, etc. The physical procedures for duplicating these interoceptive cues are described.—*Journal abstract.*

10105. Gelder, Michael. (U. Oxford, England) **Behavior therapy for anxiety states.** *British Medical Journal*, 1969(Mar), Vol. 1(5645), 691-694.—Discusses the method of systematic desensitization for the treatment of anxiety states. Behavior therapy, based on learning theory, should not be seen as a substitute for but rather an adjunct to psychotherapy, based on psychodynamic theory. The standard technique of desensitization has 3 parts: (a) some procedure to lower anxiety, usually relaxation training; (b) the construction of graded series of anxiety evoking stimuli; and (c) the

presentation of these stimuli to the relaxed patient. Desensitization effects are specific to the phobia which is the target symptom, and this has been shown to change more rapidly and more completely during desensitization than it changes with either psychotherapy or suggestion. Symptom substitution, predicted by Freudian theory, occurs no more frequently with behavior therapy than with other treatments. It is suggested that patients for behavior therapy be carefully chosen. The effectiveness of behavior therapy in treating a variety of syndromes is discussed.—S. R. Diamond.

10106. Goldstein, Alan J., Serber, Michael, & Piaget, Gerald. (Temple U., Medical School) **Induced anger as a reciprocal inhibitor of fear.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 67-70. —Describes the successful treatment of fears using artificially induced anger as the counterconditioning agent. It has been found in a limited number of cases that once the artificial induction of anger has been taught it can become available for immediate use by the S at any time and may be of sufficient strength to counteract a high degree of fear. Illustrative cases of 2 young females and 1 male are presented and problems encountered noted.—*Journal abstract*.

10107. Goorney, A. B. (St. Andrew's Hosp., Northampton, England) **Treatment of aviation phobias by behaviour therapy.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 535-544. —6 experienced aviators, incapacitated by anxiety related to flying, were given controlled relaxation and systematic desensitization. 5 returned to full flying duties and remained symptom free for over 3 yr. The Flying Anxiety scales, MPI, and MMPI scores showed excess anxiety, lowered extroversion, and elevated neuroticism scores, and raised MMPI scales before treatment. After therapy scores reverted to normal. Brief case histories are included. (50 ref.)—R. L. Sulzer.

10108. Gray, James J. (Hahnemann Medical Coll., Philadelphia, Pa.) **Case conference: Behavior therapy in a patient with homosexual fantasies and heterosexual anxiety.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Sep), Vol. 1(3), 225-232. —Presents the case history of a 22-yr-old male undergraduate with homosexual fantasies and heterosexual anxiety. Treatment with a variety of behavior therapy techniques applied in a flexible fashion is described. Marked improvement resulted. A seminar discussion by psychiatrists and psychologists of the case and techniques is reported.—*Journal abstract*.

10109. Gurman, Alan S. (Teachers Coll., Columbia U.) **A note on the use of "expanded" emotive imagery in desensitization.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 226-227. —Reports on the use of expanded emotive imagery in dealing with impasses in the process of desensitization. Expanded emotive imagery calls for the patient to describe aloud a pleasant scene until anxiety is decreased. At each further impasse, the patient is asked to add one or more details to the pleasant scene until relaxation is achieved. The addition of details increases the scene's positive stimulus value and promotes anxiety reduction along 3 dimensions: aural, visual, and cognitive-affective. S. Knapp.

10110. Hekmat, Hamid. (Wisconsin State U., Stevens Point) **Reinforcing values of interpretations and reflections in a quasi-therapeutic interview.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 25-

31.—Investigated the effects of interpretations, reflections, and schedules of reinforcement in the conditioning of affective self-references operantly during a quasitherapy interview. Fifty high school students were randomly assigned to 1 of the 5 treatment groups: Group 1 received reflections on a continuous schedule; Group 2 received reflections under a fixed ratio; Group 3 received interpretations under a continuous schedule; Group 4 received interpretations under a fixed ratio; and Group 5, the control group, received no reinforcement for the correct response class. Results indicate that groups reinforced with reflections demonstrate a significantly higher rate of conditioning and extinction than groups reinforced with interpretations ($p < .05$). Intermittent schedules demonstrate no significant effect on the rate of acquisition, but are shown to be significantly more resistant to extinction ($p < .05$). Conditioning rate was independent of degree of awareness ($p < .05$). (18 ref.)—*Journal abstract*.

10111. Jehu, Derek. (U. Leicester, School of Social Work, England) **The role of social workers in behavior therapy.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 17-28. —Asserts that social workers who use the behavioral model have the potentiality of giving substantial help in the treatment of learned behavioral abnormalities. Their role provides the advantages of observation of the patient's behavior in its natural environment. Upon identifying the stimuli that control unadaptive emotional behavior, learning principles may be used within the environment to bring about diminution of this behavior. Social workers can also utilize operant conditioning principles to modify undesirable behavior by manipulating reinforcing contingencies. A number of specific proposals are made for the use of behavior principles by social workers, and examples are given. (19 ref.)—*Journal abstract*.

10112. Kraft, T. (Claybury Hosp., Woodford Bridge, England) **Behaviour therapy or personality therapy? Psychotherapy & Psychosomatics, 1969, Vol. 17(3-4), 217-225. —Demonstrates through a case study that, as symptoms are removed during a course of behavior therapy, important personality changes also occur. It is argued that the efficacy of behavior therapy techniques may be attributed to the personality changes rather than the symptom-removal which is apparently its specific aim. The large personality changes found clinically were supported by similar changes in the various personality tests which were administered both before and after completing treatment. (15 ref.)—*Journal summary*.**

10113. Kraft, Tom & Wijesinghe, Brian. (Claybury Hosp., Woodford Bridge, England) **Systematic desensitization of social anxiety in the treatment of alcoholism: A psychometric evaluation of change.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 443-444. —9 19-32 yr. old alcoholics completed the Taylor MA Scale, the MPI, and the MMPI before and after behavior therapy. Test changes suggested that the treatment was effective in modifying symptoms and certain attitudes associated with them, but the central personality traits and attitudes were resistant to change.—R. L. Sulzer.

10114. Leitenberg, Harold, et al. (U. Vermont, Medical School) **Comparison of the effects of instructions and reinforcement in the treatment of a neurotic avoidance response: A single case experiment.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 53-58. —Discusses the

use of experimental analysis, employing a sequential design and quantifiable behavioral measures, to study the contribution of instructions and reinforcement to the modification of severe neurotic behavior in a 21-yr-old male. The overall effect of instructions was small or transient compared to that of reinforcement procedures which produced stable changes of clinical relevance.—*Journal abstract.*

10115. Litvak, Stuart B. (Veterans Administration Hosp., Psychology Service, Phoenix, Ariz.) **Hypnosis and the desensitization behavior therapies.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 787-794.—Distinguishes between desensitization techniques carried out in vivo and other modes of desensitization therapy (flooding, implosion, and systematic desensitization) which rely upon mental operations or processes. Research is reviewed and points are discussed which support a relationship between variables and phenomena found in the desensitization therapies and those found in hypnosis. This relationship appears to be greatest in those desensitization therapies basing treatment upon the utilization of mental operations. Some new lines of research are proposed. (43 ref.)—*Journal abstract.*

10116. Marmor, Judd. (U. California, Medical School, Los Angeles) **Dynamic psychotherapy and behavior therapy: Are they irreconcilable?** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 22-28.—Behavior therapists deserve much credit for having opened the armamentarium of therapeutic strategies. By so doing they have forced dynamic psychotherapists into a reassessment of therapeutic techniques and their effectiveness, which, in the long run, will be in the best interests of all psychiatrists and their patients. The improvement of theoretical and diagnostic approaches to psychopathology is urged to enable the application to each patient of the particular treatment technique and kind of therapist that together will achieve the desired therapeutic goal. 3 contrasting behavioral therapeutic approaches are discussed: (a) J. Wolpe's technique of reciprocal inhibition, (b) aversive conditioning treatment of homosexuality, and (c) the Masters and Johnson technique of treating sexual impotence and frigidity. Diverse variables involved in the effectiveness of these techniques are detailed. It is concluded that behavior therapies and dynamic psychotherapies are complementary psychotherapeutic approaches. (16 ref.)—*Journal abstract.*

10117. McCarthy, Barry W. & Messersmith, Craig E. (American U.) **Sensitivity, desensitization: Either-or?** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 243-244.—Reports on the cooperation of a behaviorally-oriented therapist and a humanistically-oriented therapist in the treatment of a 19-yr-old female undergraduate with a performance phobia and generalized interactional problems. S made great changes during the encounter group headed by the 2 therapists regarding her interactions with others, including authority figures, and greatly reduced her fears of doing and saying the wrong thing. Improvement did not generalize to her specific fear of music performance. Relaxation training, hierarchy construction, and desensitization were accomplished in 8 sessions. It is concluded that "therapists and researchers must begin to ask which techniques are most appropriate to specific problems and in what sequences they can optimally be utilized."—S. Knapp.

10118. McConaghy, N. (U. New South Wales, School

of Psychiatry, Sydney, Australia) **Subjective and penile plethysmograph responses to aversion therapy for homosexuality: A follow-up study.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 555-560.—Presents a 1-yr follow-up study (see PA, Vol. 44:3749) investigating penile volume changes of 40 male homosexuals in response to color associated photographs of nude males and females. Ss were exposed to 1 of 2 treatment conditions for 1 wk. In the 1st condition, apomorphine injections were administered, and the resultant nausea was experienced simultaneously while viewing pictures of nude males. In the 2nd condition, painful electric shocks accompanied the reading aloud of homosexual behavior descriptions. Heterosexual behavior descriptions read aloud were not paired with shock. The Mann-Whitney U test was employed to assess changes in sexual orientation prior to and following treatment. Positive conditioning—responses to color associations as well as photographs—occurred in 22 out of 27 Ss. However, assessment of film responses failed to show a general factor of conditionability. Comparison of apomorphine aversion and aversion-relief therapy results shows apomorphine has greater effect on sexual behavior, while aversion-relief therapy has stronger influence on sexual feelings. Penile volume decreases are discussed in relation to reduction of entire sexual drive vs. homosexually oriented drives.—P. Zell.

10119. McGlynn, F. Dudley; Wilson, Amos L., & Linder, Lowell H. (Mississippi State U.) **Systematic desensitization of snake-avoidance with individualized and non-individualized hierarchies.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Sep), Vol. 1(3), 201-204.—Selected 27 female undergraduates with an intense fear of snakes and assigned them to Group A, individualized hierarchies; Group B, non-individualized hierarchies; and Group C, untreated control. Group A Ss constructed their own hierarchies for desensitization. Group B Ss were paired randomly with Group A Ss and desensitized with the latter's hierarchy. Groups A and B displayed significant behavioral improvement in contrast to Group C, but did not differ significantly from each other. Limitations of the study are noted.—*Journal abstract.*

10120. Parrino, John J. (Georgia Regional Hosp., Atlanta) **Effect of pretherapy information on learning in psychotherapy.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 17-24.—Studied the effects of 3 types of pretherapy information (descriptive, theoretical, and nonrelevant) on the acquisition of an operantly learned approach response by Ss who were afraid of snakes. 11 male and female inpatients and 29 outpatients were put into a therapy situation that was designed to bring them closer to the feared object and eventually into physical contact with the animal. The response goal was shaped by rewarding Ss for successful completion of steps that approximated the final step, handling of the harmless snake. Relevant pretherapy information was found to have a facilitating effect on the learning of approach responses. (25 ref.)—*Journal abstract.*

10121. Seager, C. P. (Whitely Wood Clinic, Sheffield, England) **Treatment of compulsive gamblers by electrical aversion.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 545-553.—Discusses the concept of compulsive gambling and describes the treatment of 16 21-57 yr. old compulsive gamblers. Particular emphasis was paid to the time of onset of gambling, factors which allowed it to increase, and evidence of

neurotic illness or personality disorder. The Eysenck Personality Inventory was administered to all Ss before electrical aversion treatment. Results indicate that only 8 Ss showed marked psychopathic traits, while the rest had a history of stable family life, disrupted only recently by gambling behavior. A remarkably consistent finding in this group was the lack of any violent propensities. 5 Ss remained free of gambling for a period of 1-3 yr. after treatment. (20 ref.)—*Journal summary*.

10122. **Serber, Michael.** (Temple U., Health Sciences Center) **Shame aversion therapy.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Sep), Vol. 1(3), 213-215.—Describes shame aversion therapy, a new technique for the treatment of persons practicing deviant sexual acts, e.g., transvestism, voyeurism, pedophilia, exhibitionism, and frotteurism. Ss, who are embarrassed or self-conscious about the act they perform, perform the act on demand in front of a number of Os. The act is made to continue for 15-35 min. and its style kept as close to the in vivo situation as is possible. Ss are told to observe themselves and be aware of being observed. Of 8 Ss treated, 5 have remained free of their asocial behavior during a 6-mo followup period. 2 prerequisites for successful shame aversion therapy are (a) the patient must be ashamed of the act and desire not to be observed in its execution, and (b) he must be aware that he is performing the asocial act. Previous psychotherapy appears not to correlate with success or failure in shame aversion therapy.—*Journal abstract*.

10123. **Stern, Richard.** (Inst. of Psychiatry, London, England) **Treatment of a case of obsessional neurosis using thought-stopping technique.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 441-442.—Describes the case of a 27-yr-old male who had a long-standing and previously resistant condition which was treated successfully by behavior therapy. Treatment consisted of 15 45-min sessions in which the patient listed his fears in order, received relaxation training and medication, visualized a lesser fear situation, and said stop upon signal by the therapist. Though he remained an obsessional personality, the patient was able to transfer the technique to his life situation.—*R. L. Sulzer*.

10124. **Tomlinson, J. R.** (Board of Education, Psychological Services, Minneapolis, Minn.) **The treatment of bowel retention by operant procedures: A case study.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 83-85.—Describes a chronic problem of bowel retention in a 3-yr-old boy who was treated by an operant approach. A contingency was established in which the response of voluntary elimination was the only available instrumental response that would be followed by a bubble gum reinforcer. The sole task of the parents was to check the adequacy of S's response and to dispense the gum. The rate of voluntary defecation increased from a base rate of once/wk to 6/wk by the end of the 3rd wk. The rate was maintained at this level at the end of a 2-yr period, though a new reinforcer was introduced at the end of the 1st yr. During the 14th wk., when the contingency was removed, the rate fell to its original level.—*Journal abstract*.

10125. **Turner, Ruby.** **A method of working with disturbed children.** *American Journal of Nursing*, 1970(Oct), Vol. 70(10), 2146-2151.—Describes a research project team which was formed at the Wisconsin Children's Treatment Center with the purpose of modifying the behavior of psychotic children. The principles of operant conditioning were used. The

program differed from other programs employing operant conditioning in 4 ways: (a) the age of the patients, 3-7 yr. old; (b) their severe symptoms of psychosis; (c) the provision of intensive care 24 hr. a day; and (d) making the parents an integral part of the treatment team. There were 4 study patients, 2 of them are described in this article. A 4½-yr-old boy's tantrums were stopped by using short time-outs, lasting 1-5 min. His rate of speech was increased by rewarding a spontaneous word and by speech games at meals. He was discharged 2 yr. after admission. A 7-yr-old girl had destructive rages. At these times she would injure herself and anyone who attempted to stop her. After time-outs failed, electric shock was used successfully. Discharge is anticipated after 3 yr. of hospitalization.—*B. A. Burkard*.

10126. **Wagner, Bernard R. & Paul, Gordon L.** (Adolf Meyer Zone Center, Decatur, Ill.) **Reduction of incontinence in chronic mental patients: A pilot project.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 29-38.—Describes a pilot demonstration project employing operant and classical conditioning principles to reduce incontinence in chronically institutionalized patients. 35 men housed on an "incontinent ward" were checked regularly for day and night soiling. These checking procedures led to the elimination of 13 Ss who gained continence during base-line observation. 3 other Ss were eliminated from the sample because of neurological impairment. The frequency of soiling behavior stabilized after 8 wk. of base-line observation, and a systematic reinforcement program was instituted for the remaining 19 Ss. All Ss in the final sample of 19 showed a reduction in soiling and a correlated improvement in minimal social behavior. Implications of the project for introducing change into custodial institutions are discussed.—*Journal abstract*.

10127. **Wells, Wallace P.** (Metropolitan Center for Problems in Living, Detroit, Mich.) **Relaxational-rehearsal: A variant of systematic desensitization.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 224-225.—Describes a technique derived from the treatment of 2 patients in which the patient fantasizes a confrontation while in a state of deep relaxation. After being trained in relaxation, the patient is led through a description of the setting of the confrontation, the approach, the confrontation, the reaction, and the exit. If at any time during this process there is an increase in tension or anxiety, the process is stopped and the patient is instructed to relax, and the disturbing scene is repeated until it no longer produces anxiety. It is suggested that this technique may be useful in cases where a stressful situation is imminent.—*S. Knapp*.

10128. **Wisocki, Patricia A.** (Boston Coll.) **Treatment of obsessive-compulsive behavior by covert sensitization and covert reinforcement: A case report.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Sep), Vol. 1(3), 233-239.—Presents the case history and treatment of a 27-yr-old female with a multiplicity of obsessive-compulsive behaviors. 8 2-hr sessions of covert sensitization and covert reinforcement were used to condition an aversive response to the performances of the obsessive-compulsive behaviors and to reinforce other responses in place of those behaviors. (34 ref.)—*Journal abstract*.

10129. **Wolpe, Joseph.** (Temple U., Health Sciences Center) **Behavior analysis of a case of hypochondriacal anxiety: Transcript of first interview.** *Journal of Behavior Therapy & Experimental Psychiatry*,

1970(Sep), Vol. 1(3), 217-224.—Presents an account of the 1st interview with a patient suffering from a very disabling anxiety in response to some somatic symptoms, especially a pain in the chest. Fear of such symptoms had been conditioned in a series of episodes over the previous 30 yr. The interview shows how the relevant stimuli were identified, and the outlines of a treatment program were developed from the information obtained.—*Journal abstract*.

10130. Wolpe, Joseph & Flood, Jack. (Temple U., Medical School) **The effect of relaxation on the galvanic skin response to repeated phobic stimuli in ascending order.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Sep), Vol. 1(3), 195-200.—Constructed phobic hierarchies and selected from each hierarchy 5 evenly separated items that spanned the range from least to most disturbing. 10 Ss diagnosed as having anxiety disturbances of a phobic character were randomly divided into 2 groups, 1 which received relaxation training and 1 which did not. The 5 selected items from each S's hierarchy were presented 5 times each in ascending order, during each of 4 sessions. GSR was recorded for every stimulus. A consistent decreasing trend in magnitude of response was found for each of the 5 scenes across sessions for the relaxed group, and no trend in the nonrelaxed group. (22 ref.)—*Journal abstract*.

Special & Adjunctive Therapy

10131. Boenheim, Curt & Stone, Bernard. (Columbus State Hosp., O.) **Pictorial dialogues: Notes on a technique.** *Bulletin of Art Therapy*, 1969(Jan), Vol. 8(2), 67-69.—Presents a technique whereby the art therapist either paints a picture similar to the patient's or completes a single picture with the patient, who is then asked to write words on the paintings in answer to direct questions.

10132. Braund, Janice L. & Moore, Rosemary J. (Prince Henry Hosp., Sydney, New South Wales, Australia) **The use of behaviour therapy in occupational therapy with psychiatric patients.** *Australian Occupational Therapy Journal*, 1969(Jul), Vol. 16(3), 27-32.—Describes the basic principles of behavior therapy: extinction, aversion, and inhibition of reinforcement. The application of behavior therapy to occupational therapy is demonstrated in the case histories of (a) a 40-yr-old woman with a long history of chronic anxiety, associated with phobias, panic attacks, and nausea; and (b) a 30-yr-old man suffering from obsessive-compulsive behavior.—*S. Knapp*.

10133. Burkhead, David E. (Western Michigan U.) **The reduction of negative affect in human subjects: A laboratory investigation of rational-emotive psychotherapy.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2097-2098.

10134. Crouch, Paul W. (Auburn U.) **An investigation of the effectiveness of relaxation training with hospitalized psychiatric patients.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2173.

10135. Heyder, Dietrich W., DelGrosso, James, & DelGrosso, Patricia. (Mental Health Center of Norfolk & Chesapeake, Norfolk, Va.) **Case study: The use of volunteer art therapists with underprivileged children.** *Bulletin of Art Therapy*, 1969(Apr), Vol. 8(3), 97-104.—Offered art therapy to an 8-yr-old boy who had few consistent relationships and little opportunity to

identify with a male figure. Since he was in the habit of acting out his hostility in a way which led to rejection, therapy concentrated on building up a relationship and giving him a means of expression which did not lead to rejection. Pictures show his attempt to get close to the therapists, his increasing self-assurance and decisiveness, and the basic warmth and gentle feelings hidden by antagonistic behavior. As a result of a good relationship with 2 people who accepted him, and the development of a balance between dependency and independence, he was able to take a job and his social behavior improved.—*Journal summary*.

10136. Kline, Milton V. (Inst. for Research in Hypnosis, Morton Price Clinic, New York, N.Y.) **The role of desensitization and homeostasis in relation to the therapeutic gain derived from hypnotherapy.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 213-216.—Reports part of a 2-yr study in which hypnosis was used to treat 75 patients who had been unable to respond to other forms of therapy. Occular fixation techniques for induction, maintenance of relaxation, and reinforcement of hypnosis through self-hypnotic training were used. Frequency of recalled dreams, increased ease in imagery, and improved sleep patterns were noted. Of 20 Ss who had been taking daily medication at the beginning of the study, only 4 were at the end of treatment. 4 case histories showing marked improvement are described. It is concluded that "the use of hypnosis for prolonged stress reduction, the reinforcement of homeostasis through self-hypnosis, and the alteration of sensory and perceptual mechanisms can, in selected patients, yield therapeutic results that had not previously been possible for them." (15 ref.)—*S. Knapp*.

10137. Lipkin, Stanley. (1722 E. 55th, Chicago, Ill.) **The imaginary collage and its use in psychotherapy.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 238-242.—Proposes the use of an imaginary collage in therapy (a) to adapt M. McLuhan's notion of nonlinearity to the therapeutic process, (b) to provide additional stimulation to a patient who is bogged down or blocked, and (c) to approach the therapeutic process with a spirit of play. The patient assembles a collage on an imaginary canvas and describes the objects and locations on the canvas. When the collage is complete, the patient steps back and gives his overall reaction to his creation. 2 verbatim accounts, and 4 excerpts from collage creations are presented. It is noted that each patient perceived his collage as a highly personalized statement about his current self, and detected elements of discordance and awareness of a need to change. It is concluded that this technique may be useful in providing insight for the patient, and may in certain cases lead to a breakthrough.—*S. Knapp*.

10138. Milkie, George M. (10710 Kay Berrie, St. Louis, Mo.) **Hypno-ophthalmic therapy: Fact or fallacy.** *Journal of the American Optometric Association*, 1970(Jul), Vol. 41(7), 627-633.—Presents a realistic look at hypnosis and its relationship to optometry; an evaluation of articles and publications regarding optometric hypnosis as well as a review of legislation of hypnosis and its intent. (23 ref.)—*Journal abstract*.

10139. Pancheri, Paolo. (U. Roma, Italy) **La terapia elettroconvulsivante monolaterale ravvicinata negli stati depressivi.** [Monolateral electroconvulsive therapy at short intervals in depressive states.] *Rivista di Psichiatria*, 1969(Nov), Vol. 4(6), 510-516.—Studied shortened monolateral ECT to verify (a) its therapeutic

effect on the nondominant hemisphere; (b) if it can provoke a psychoorganic syndrome; and (c) if recovery is faster. 20 30-60 yr. olds of heterogeneous backgrounds were given ECT, and the results were evaluated according to Wechsler's Depression Rating Scale and Memory Scale. 15 Ss completely recovered; 3 partially recovered, and 2 were unsuccessful. It is concluded that: (a) the therapeutic effect of monolateral ECT on the nondominant hemisphere can be substituted for transtemporal ECT or to monolateral ECT with the usual time intervals; (b) the compromising of mnemonic functions is not clinically significant; and (c) the hospital stay is $\frac{2}{3}$ shorter than in transtemporal ECT or in unilateral ECT according to the usual method. (English summary) (22 ref.)—A. M. Farfaglia.

10140. Pedley, Dawn. **The psychodynamics involved in an occupational therapist's use of creative activities and discussion groups in physical and psychiatric rehabilitation.** *Australian Occupational Therapy Journal*, 1968(Jul), Vol. 15(3), 37-46.—Proposes that if the occupational therapist believes that "the face to face group working on a problem is the meeting ground of individual personality and society," then she must be able to handle groups effectively and must understand something of group dynamics. Creative activities and discussion groups are described as powerful tools which have relative values in both physical and psychiatric application. It is concluded that through expression and discussion within a group situation the patient can learn to function and experience healthy interpersonal relationships, the prerequisite of his functioning in the community.—*Journal summary.*

10141. Reitano, S. & Gazzola, G. (Provincial Psychiatric Hosp., Como, Italy) **Alcune considerazioni di ordine elettroencefalografico e clinico sull'elettroshock-terapia praticata in anestesia mediante diazepam.** [Some considerations about the electroencephalographic and clinical findings following electroshock therapy with anesthesia induced by diazepam.] *Rivista di Neurobiologia*, 1970(Apr), Vol. 16(2), 174-199.—Studies the advantages of using benzodiazepines instead of barbiturates as anesthesia of brief duration in ECT. The advantages are low toxicity and fewer side effects often caused by anesthesia. Previous studies indicated that valium, in addition to the above, eliminates the amnesic syndrome of ECT. 20 patients were treated with ECT using 20-30 mg. valium given iv as the anesthetic. It is concluded that with valium the memory disturbance is minimum. 6 Ss had memory gaps and 1 showed some mental confusion. None showed EEG modifications which are typical in ECT. 2 Ss showed EEG modifications typical of benzodiazepines; and 4 showed a moderate decrease in frequency of the alpha rhythm with some brief theta sequence. Valium is beneficial in ECT, since it eliminates the amnesic syndrome and the risk of discharge of latent epilepsy. (English summary) (39 ref.)—A. M. Farfaglia.

10142. Rosenthal, Saul H. & Wulfsohn, Norman L. (U. Texas, Medical School, San Antonio) **Electrosleep: A preliminary communication.** *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 146-151.—Describes a pilot study of electrosleep, the technique of inducing a relaxed state by the transcranial application of a low intensity electrical current. 6 outpatients and 3 inpatients with chronic anxiety and depressive symptoms and associated chronic insomnia were scored on the Zung Self-Rating Depression Scale and were also given

clinical ratings on anxiety, depression, and sleep disturbance on 1- to 7-point scales. 7-10 treatments were given to each S, the 1st treatment 10 min. of current, the 2nd 20 min., and subsequent treatments, 30 min. The machine settings were 12-20 V and .5-1 ma. 5 outpatients showed marked improvement in anxiety, depression, and insomnia. 1 outpatient and all inpatients showed some improvement anxiety and insomnia, but no improvement in the depressive symptoms. No side effects were reported. Future, more controlled, experiments are outlined.—S. Knapp.

10143. Stern, Roy & Honoré, Ethelmary. (Temple U., Health Sciences Center) **The problem of national organization: Make haste slowly.** *Bulletin of Art Therapy*, 1969(Apr), Vol. 8(3), 91-95.—Discusses whether art therapy as a profession exists and whether it is ready for national organization and certification. It is concluded that a pathology and therapy of art are yet to be developed through an understanding of the art process. Until such a therapy is developed, it will be impossible to set standards for licensing. Strengthening of groups and training centers on the local level is urged.—M. West.

10144. Wylie, C. E. (Fremantle Day Centre, Western Australia) **Particular features of occupational therapy at Fremantle Day Centre Western Australia.** *Australian Occupational Therapy Journal*, 1969(Jul), Vol. 16(3), 17-20.

Drug Therapy

10145. ———. **The methodology of international studies of the effectiveness of psychotropic drugs: A conference.** *Psychopharmacology Bulletin*, 1969(Jul), Vol. 5(3), 5-41.—Contains 4 papers of on-going national collaborative studies presented at a 1968 international conference in Yugoslavia on psychotropic drugs. The 1st paper describes a Canadian research project in 5 hospitals, testing the therapeutic activity of nicotinic acid in schizophrenics. The theoretical background, methodology, and statistical design for the examination of 4 hypotheses are detailed. The 2nd paper reviews difficulties encountered in a United Kingdom research project involving a multicentered collaborative trial of antidepressive drugs (imipramine and phenelzine) when compared with a placebo and ECT. The 3rd paper reviews studies in the United States on the use of chemotherapy in psychiatry. The highlights of 20 projects are discussed. The 4th paper discusses methodological problems encountered in drug research with special emphasis on tranquilizing drugs. Questions concerning dosage, duration, setting, and double-blind methodology are considered.—P. McMillan.

10146. Bernik, Vladimir. **Analgesia tranqüilizante com fiorinal: Estudio analítico de 28 casos de cefaléia tensional.** [An analgesic-tranquilizer, fiorinal: Analytic study of 28 cases of tension headache.] *O Hospital*, 1969(May), Vol. 75(5), 1827-1838.—Investigates the use of fiorinal (130-mg acetophenetidin, 200-mg acetylsalicylic acid, 50-mg butalbital, and 40-mg caffeine/tablet) for treatment of tension headaches in 28 13-68 yr. old male and female Ss. The therapeutic superiority of an analgesic-tranquilizer combination is stressed. A maintenance dosage of 1 tablet every 6 hr. resulted in the disappearance of the symptomatology in 75% of the cases and partial remission in 14.3%, with

improvements noted' within the 1st 15-30 min. (25 ref.).—H. Singer.

10147. Boulton, Alan A., Cookson, Brian, & Paulton, Richard. (University Hosp., Psychiatric Research Unit, Saskatoon, Saskatchewan, Canada) **Hypertensive crisis in a patient on MAOI antidepressants following a meal of beef liver.** *Canadian Medical Association Journal*, 1970(Jun), Vol. 102(13), 1394-1395.—Hypothesizes that ingestion of foods containing p-tyramine by "individuals ingesting the monoamine oxidase inhibitor (MAOI)" causes hypertensive crisis. The case history of a 30-yr-old male is presented. Data support the hypothesis and suggests that further research on "the amine contents of natural, prepared and spoiled foods" is needed.—G. Steele.

10148. Da Souza Mattos, Newton. (Children's Neuropsychiatric Hosp., Psychopedagogical Div., Guanabara, Brazil) **Emprêgo da valnoctamida (nirvanil) em oligofrênicos erêticos e epilêpticos.** [Use of valnoctamide (nirvanil) on erethitic and epileptic oligophrenics.] *O Hospital*, 1969(May), Vol. 75(5), 1701-1704.—Administered 200-mg doses of the psycholeptic valnoctamide 3 times daily for 40 days, regardless of previous medication, to 14 8-15 yr. old hospitalized Ss with very low IQs, poor socioeconomic backgrounds, and behavior marked by severe irritability, hyperexcitability, aggressive impulses, inability to concentrate, uncoordinated movements, and lack of sociability, etc. Of the 7 cases with associated epileptiform syndromes, convulsive crises occurred only once in 2 Ss. Greater freedom from restraint, acceptance of specific tasks, better performance, and other significant improvements in the group are attributed to valnoctamide's sedative action in reducing tension and anxiety, without depressive and somnolent manifestations, or interference in routine activity. Its effectiveness as a psychopedagogical therapeutic is stressed.—H. Singer.

10149. Dallos, Vera & Heathfield, Kenneth. (Whipps Cross Hosp., London, England) **Iatrogenic epilepsy due to antidepressant drugs.** *British Medical Journal*, 1969(Oct), Vol. 4(5675), 80-82.—Describes 9 cases of iatrogenic epilepsy due to taking tricyclic antidepressant drugs. The drugs given were amitriptyline; imipramine and protriptyline; 2 Ss were also taking chlorthalidone. It was established that each S had 1 or more of the following contributing factors: previous or family history of epilepsy; preexisting brain damage; retinal and generalized arteriosclerosis; alcoholism; barbiturate withdrawal; and previous ECT. EEG was done on all Ss: 6 cases were reported as normal; 2 cases were suggestive of subcortical epilepsy; and 1 case showed a slight abnormality. Before prescribing antidepressant drugs these factors should be sought in the history, and if any are present prophylactic anticonvulsant medication is indicated. Chlorthalidone is considered to be inadequate to counteract the convulsant effect of antidepressant drugs.—I. Halev.

10150. Demers, Robert G. & Heninger, George. (Yale U., Medical School) **Electrocardiographic changes during lithium treatment.** *Diseases of the Nervous System*, 1970(Oct), Vol. 31(10), 674-679.—Obtained 183 EKGs, under controlled conditions, from 9 manic depressive patients while they were on and off lithium. At some point during lithium treatment, the tracings of all Ss demonstrated T-wave depression, a phenomena which by analysis of longitudinal data, was statistically significant in 7 Ss. No other consistent EKG changes

were observed. During lithium treatment 1 S had a fall in serum potassium; in the other Ss serum electrolytes were normal. In 4 Ss where lithium was stopped, T waves appeared to return to control values. It is concluded that lithium treatment of manic depressive illness is associated with a high frequency of T-wave depression in the EKG, probably representing a benign reversible response of the myocardium to lithium.—*Journal summary.*

10151. Doll, Richard. (University Coll. Hosp. Medical School, London, England) **Recognition of unwanted drug effects.** *British Medical Journal*, 1969(Apr), Vol. 2(5649), 69-76.—Reviews the toxicity and efficacy of new drugs, e.g., MAO inhibitors. Hypertensive attacks were 1st noticed when iproniazid was introduced for the treatment of tuberculosis. Hypertensive crises were also prevalent in patients taking tranlycypamine for depression. Warnings issued concerning the use of aerosols containing sympathomimetics in the treatment of asthma were based on the increased number of deaths of people suffering from asthma, 84% of whom were using pressurized aerosols containing isoprenaline. A few reports have been issued on the side effects of oral contraceptives that involve deep vein thrombosis or pulmonary embolism. The use of enterically coated thiazide and potassium chloride tablets was found to be the cause of 11 cases of localized small bowel stenosis and 1 case of perforated ulcer. It is suggested that no single method of investigation can enable all unwanted effects of drugs to be recognized. The following sources of information should be pooled: pharmacological experiences, medical intelligence, controlled observations, and early warnings. (64 ref.).—I. Halev.

10152. Downing, Robert W., Rickels, Karl, & Horn, Neal L. (Philadelphia General Hosp., Pa.) **Hostility conflict in neurotic patients who prematurely terminate drug treatment.** *Journal of Nervous & Mental Disease*, 1970(Sep), Vol. 154(3), 211-218.—Hypothesized that conflict about the expression of hostility is less severe in neurotics completing a course of psychotropic drug treatment than in neurotics who drop out of treatment. In support of this hypothesis, it was found that there was a stronger association between measures of pretreatment hostility and pretreatment symptomatology in 46 lower socioeconomic Ss dropping out of a 4-wk course of drug treatment than among a group of 50 Ss completing treatment. Hostility measures were derived from physician ratings of hostility and irritability and from the Buss-Durkee Hostility Inventory filled out by Ss prior to the onset of treatment. Symptom measures included psychiatrist ratings of anxiety and overall level of psychopathology, as well as the number of symptoms and average symptom discomfort from a symptom check list which surveyed neurotic symptomatology primarily in the somatic area. Results seem to imply that patient anger, even in a drug treatment situation with lower socioeconomic class Ss, must be dealt with if treatment is to attain optimal effectiveness. There is evidence that the 2-wk dropouts experienced significantly less improvement than completers at a point midway through treatment. However, the lack of follow-up data on the dropout group leaves undetermined the extent to which hostility conflict is confined to those dropouts who fail to improve.—*Journal abstract.*

10153. Figueiredo, J. C. (São Paulo State Penitentiary Surgery Clinic, Brazil) **Observações clínicas com medazepam injetável: Nota prévia.** [Clinical studies with injectable medazepam: Preliminary note.] *O Hos-*

pital, 1970(Feb), Vol. 77(2), 621-625.—1 ampoule (10 mg.) of medazepam, a new benzodiazepine derivative, was injected daily (im or iv) for 10 consecutive days to 5 Ss with psychoneurovegetative disorders, 3 Ss with duodenal ulcers, and 3 paraplegics. Results demonstrate almost total remission of psychological symptoms (anxiety, emotional instability, depression, etc.) without harmful side effects. (31 ref.)—*H. Singer*.

10154. **Free, S. M. & Rudnick, A.** (Smith Kline & French Lab., Research & Development Div., Philadelphia, Pa.) **Feasibility of evaluating psychopharmaceutical agents in cooperative studies in private practice.** *Diseases of the Nervous System*, 1970(Nov), Vol. 31(11), 763-766.—6 Es working separately in their private practices followed an identical study plan in a cooperative effort to assess the effect of drug vs. placebo treatment, under double-blind conditions, in psychoneurotic patients. At least 30 Ss were assigned to each E. Principal symptoms were anxiety, agitation, tension, and hyperactivity. Drug treatment consisted of 2 mg. trifluoperazine, twice daily for 4-6 wk. A uniform Global Rating Scale and a previously tested symptom checklist (the Physicians Rating List) were used to determine levels of anxiety and total morbidity before and at the end of treatment with coded medication. Results are presented for each study separately and for all 6 combined, and indicate that the drug relieved presenting symptoms better than the placebo did, and that this difference was statistically significant.—*Journal summary*.

10155. **Gainotti, G., Taramelli, M., & Meneghini, E.** (U. Perugia, Nervous & Mental Illness Clinic, Italy) **Studio clinico controllato di un nuovo ansiolitico: Il R05-4556.** [A controlled clinic study with R05-4556 in the treatment of anxiety/tension states.] *Rivista di Neurobiologia*, 1968(Oct), Vol. 14(4), 498-509.—Studied the effects of R05-4556, which has a strong tranquilizing effect as well as being anticonvulsive and low in toxicity. Rating scales and self-evaluation scales were used to obtain accurate results. 3 groups of Ss with serious cases of anxiety/tension or depressive states were treated: 53 with R05-4556, 20 with chlorthalidopexide, and 26 with placebo. It is concluded that R05-4556 has a greater therapeutic value. Improvement is quicker in anxiety/tension states, in symptoms of hypochondriac polarization, and in depressive states of an affective nature. (English summary)—*A. M. Farfaglia*.

10156. **George, H. R.** (Banstead Hosp., Sutton, England) **A case of the Kleine-Levin syndrome of long duration.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 521-523.—Reports a case of Kleine-Levin syndrome in a 34-yr-old unmarried male with symptoms of periodic lack of stamina, compulsive eating, and drowsiness. This illness had occurred every few months over an 18-yr period, with attacks lasting from 5-7 days, and lessening in intensity through the years. The patient responded reasonably well to oral amphetamines for nearly a yr., but his considerable personality difficulties remained. The obesity of his brother, with no psychiatric illness, suggests a familial factor.—*Journal summary*.

10157. **Grinbaum, Emilio; Lages, Ernani F., Ramalho, Alvaro M., & Grinbaum, Frida S.** **O emprego de psicotrópicos em clínica médica: I. Observação com a doxepina. II.** [The use of psychotropics in medical clinics: I. A study with doxepin. II.] *O Hospital*, 1970(Jan), Vol. 77(1), 77-82.—Administered 10-mg doxepin tablets to 19 female and 21 male unselected,

psychosomatic outpatients, ages 20-70. All were examined psychologically, with 30 tested via the Rorschach, TAT, and MMPI: 95% of the cases were marked by anxiety and depression. The initial dosage was 30 mg/day for the 1st wk. and the daily dosage was increased by 10 mg. for each of the next 3 wk. Ss were divided into 2 groups: (a) a double-blind study of 10 Ss receiving doxepin revealed 5 significant and 5 moderate improvements, and of the 10 Ss under placebo control, improvements were good in 4, slight in 4, and aggravated in 2; and (b) of the remaining 20 Ss, all of whom received doxepin, improvements were noted in 14 Ss, moderate in 4, slight in 1, and null in 1. Despite some favorable results with placebos, doxepin's effectiveness as an antidepressant and anxiolytic was confirmed. Side effects, drowsiness in particular, were absent. (English summary)—*H. Singer*.

10158. **Kellner, Robert.** (U. New Mexico, Medical School) **Drugs, diagnoses, and outcome of drug trials with neurotic patients: A survey.** *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 85-96.—Surveyed 107 published double-blind drug trials (1955-1966) with neurotic patients. Results are tabulated according to the drugs used and the diagnostic categories of the patients, and the findings are discussed. It is noted that results of many drug trials appear to be conflicting: however, drug trials published since 1960 do yield a larger proportion of significant results. (102 ref.)—*Journal abstract*.

10159. **Krakowski, Adam J.** (State University Coll. New York, Plattsburgh) **Comprehensive approach to psychopharmacology.** *New York State Journal of Medicine*, 1969(Nov), Vol. 69(22), 2886-2894.—Asserts that the "usefulness of chemotherapy for mental illness depends on understanding many basic factors pertaining to (a) the drug, (b) the patient and his illness, and (c) the nature of therapy and the therapist. These factors are reviewed and the following conclusions drawn. Psychopharmacology utilizes biochemical as well as psychologic mechanisms. Chemotherapy of mental illness is based not entirely on a medical model because of the nature of mental illness and the fact that the method utilizes very involved nuances of interpersonal relationships and depends on the personality of the patient, his basic attitudes towards others, and his relationship to the physician. The application of psychochemotherapy requires the physician to be knowledgeable and skillful, unbiased, and capable of a good therapeutic flexibility depending on the quality of the patient's needs, his assets, and his liabilities. Knowing the method (chemotherapy) and the tool (the drug) with all of its potentials, the drawbacks and dangers, makes this approach most useful. (38 ref.)—*Journal abstract*.

10160. **Leal, Raul.** **Modificações psico-dinâmicas e sócio-dinâmicas postas em evidência pelo metilperidol.** [Psychodynamic and sociodynamic changes caused by methylperidol.] *Actas Luso-Espanolas de Neurologia y Psiquiatria*, 1969(Oct), Vol. 28(4), 299-305.—Tested 32 Ss with (a) oligophrenia and personality disorders, (b) abnormal personality development and reactions, (c) endogenous psychoses, and (d) somatically based mental disturbances and psychoses. Ss were administered between 15-45 mg/day of methylperidol (luvatren, a neuroleptic). Results were good with passive and inhibited oligophrenics, with holodysphrenics, and with catatonics. Paranoid hallucinations were modified and sometimes dissociated to

the point of disjoining the schizophrenic nosological entity. Bad effects included agitation in cases of eretic oligophrenia. Benefits were seen in social rehabilitation and readaptation to society. (English summary)—*P. Hertzberg*.

10161. **Lima, Pedro R., de Miranda, A. Porto, & Vieira, Carlos L.** (Medical Penal Inst., Biopsychological Service, Guanabara, Brazil) **Resultado da observação clínica de um ansiolítico em casos de neuroses de angústia.** [Clinical observation results of an anxiolytic in cases of anxiety neurosis.] *O Hospital*, 1968(Dec), Vol. 74(6), 2091-2097.—Ss were all males: 28 cases of anxiety neurosis, 1 paranoiac, 1 hysteric, and 1 chronic insomniac. 1 tablet of adumbran (5 mg.) (oxazepam) was administered 3 times daily or 1-2 tablets at bedtime. Complete symptomatological remissions were noted in 26 cases, good improvements in 3, and none in 2. Adumbran is thus considered to be effective against anxiety neurosis symptoms and has no side effects. (English summary)—*H. Singer*.

10162. **Madalena, J. Caruso.** (Rio de Janeiro Psychiatric Assoc., Brazil) **Observações preliminares com I.H.B 215 nos estados depressivo-ansiosos.** [Preliminary observations with IHB 215 in anxiety depression states.] *O Hospital*, 1969(Jan), Vol. 75(1), 11-21.—Confirms the excellent antidepressive and anxiolytic properties of IHB 215 (25 mg. imipramine and 10 mg. chlorthalidone) when used alone or in combination in the treatment of 25 female and 5 male depressives with anxiety (ages 24-76): 15 remissions, 8 improvements, 1 discontinued, and 6 null. The average daily dosage was 3 tablets. EEG, EKG, and arterial tension controls varied from 2-60 days. (English summary)—*H. Singer*.

10163. **Masciocchi, A., Reitano, S., & Cazzola, G.** **Esperienze cliniche ed elettroencefalografiche su un nuovo farmaco anticefalalgico ad azione antiserotoninica: Il preparato FI 6337 (liserdol).** [Clinical and electroencephalographic observations on a new anticephalgic drug with antiserotonergic action: Preparation FI 6337 (liserdol).] *Rivista di Neurobiologia*, 1969(Apr), Vol. 15(2), 348-379.—Presents results of clinical trials on 23 patients using liserdol (FI 6337) a new antiserotonergic drug for use in the treatment of migraine headaches. FI 6337 was administered in daily doses of 4-6 mg. (in some cases sedatives were also administered). Control EEGs were obtained prior to administration of the drug and at regular intervals following initiation of treatment. Results were deemed unfavorable, as side effects (e.g., anorexia, extreme irritability, insomnia, and depressive reactions) outweighed therapeutic gains. In addition, unfavorable alterations in EEG alpha activity accompanied administration of the drug after a 4-day period. (English summary) (87 ref.)—*B. A. Stanton*.

10164. **Masciocchi, A., Reitano, S., & Masè, G.** **Modificazioni elettroencefalografiche indotte da psicofarmaci, correlazioni clinico-elettrofisiologiche per una "terapia pilotata."** [Electroencephalographical variations induced by psychotropic drugs: Clinical-electrophysiological correlations for a "guided therapy."] *Rivista di Neurobiologia*, 1970(Jan), Vol. 16(1), 3-61.—Reviewed EEG variations, previously studied, which were induced by psychotropic drugs. Contradictory findings on the same drug often are due to different dosages or to the individual's sensitivity. Experiments were conducted with the following drugs

which are widely used in psychology: (a) antidepressants—anti-MAO, a dibenzitic derivative, and imipramine; and (b) neuroleptic drugs—chlorpromazine, thioridazine (a propicazine derivative) and butyrophenone. The correlations between biorhythmic cerebral variations and the development of the illness is noted. It is concluded that EEG observation offers an objective criterion both for the choice and dosage of the drug as well as for the prognosis necessary for a rapid and stable recovery. (English summary) (8 p. ref.)—*A. M. Farfaglia*.

10165. **Pahnke, Walter N., et al.** (Johns Hopkins U., Medical School) **The experimental use of psychedelic (LSD) psychotherapy.** *JAMA: Journal of the American Medical Association*, 1970(Jun), Vol. 212(11), 1856-1863.—Summarizes some of the various psychedelic experiences and psychedelic psychotherapeutic methods emphasizing the psychedelic-peak psychotherapy and the various research projects concerning that method. A case study is presented of a 58-yr-old woman who had suffered from breast cancer for 12 yr. and from metastatic cancer of the spine. The patient was given 300 gm. of LSD on 4 separate occasions over a 2-yr period. This psychotherapeutic method was deemed helpful because the desired results (relief from the depressive state and anxiety feelings which accompanied the diseases) were obtained in a strikingly short period of time. It is suggested that research with "psychedelic drugs needs to be continued to learn more about their effective use." Despite the "potential uses for psychedelic drugs suggested by our work," the prognosis for such research is poor. (32 ref.)—*P. R. Shibelski*.

10166. **Park, Lee C. & Imboden, John B.** (John Hopkins U., Medical School) **Clinical and heuristic value of clinical drug research.** *Journal of Nervous & Mental Disease*, 1970(Nov), Vol. 151(5), 323-340.—Presents findings from the analysis of psychopharmacological research, divided into categories of drug and nondrug factors. It was found that clinical drug research has not added much to what has been learned through clinical experience. The heuristic value of drug research, however, has been great in terms of opening new approaches to understanding and influencing mental functioning and psychopathology, and in the development of research methodology for the behavioral sciences. Perhaps the greatest clinical value of the age of drug research has been that it has catalyzed the study of directive approaches to psychotherapy. The terms "nondrug" and "nonspecific factors," frequently used by psychopharmacologists to cover critical psychotherapeutic factors in patient improvement are discussed. A narrow interpretation caused by these terms is believed to have prevented adequate study of simultaneous psychotherapy and pharmacotherapy and to be reflected in the lack of applicability of research findings for the practitioner. Psychotherapy variables relating to drug therapy are discussed. General guidelines for the clinical use of psychotropic drugs are included. (106 ref.)—*Journal abstract*.

10167. **Pimenta, Arlindo C.** **Ensaio clínico com um novo antidepressivo do grupo das iminodibenzilas: Clorimipramina (G 34586).** [Clinical tests with a new antidepressant from the iminodibenzyl group: Chlorimipramine (G 34586).] *O Hospital*, 1969(May), Vol. 75(5), 1673-1677.—Presents a 7-mo study in which 40 20-55 yr. old male and female in- and outpatients suffering primarily from depression (postmenopausal,

neurotic, schizophrenic, involutive) were administered G 34586 in daily oral doses of 25-150 mg. from 10-90 days, while 10 19-65 yr. old like-type hospitalized female depressives received 50-75 mg. doses iv daily from 3-15 days. Associated therapy or laboratory controls were not involved. Initial effects were noted in about 5 days in both groups. Results obtained in 60% of the Ss is considered evidence of strong antidepressant action and high tensiolytic effect (particularly when used iv) even among schizophrenics, though their improvement was slower. Minimal side effects are reported. (English summary)—*H. Singer.*

10168. Pougetoux, J. (Psychiatric Hosp., Bassens-en-Savoie, France) **De nepenthés aux chimiothérapies modernes.** [From nepenthes to modern chemotherapy.] *Aggressologie*, 1969, Vol. 10(2), 93-119.—Reviews the principal psychotropic drugs which personal experience has permitted to circumscribe (with constant patients and O) to their original correlative particularities within the limits of their therapeutic application. Various "strategies" based on "rational" references, or resulting mainly from analogies, or finally "empirical-criticistic," are suggested. In this respect, the clinical classifications most currently used in France are recalled, and concisely some drug associations are presented. The effect observed constitutes a new method of overall action, the empirical existence of which may be a source of mediation for the "fundamentalist." Impressions concerning hydroquinone, succinic acid semi-aldehyde, 4-OHB, Ag 246, and the amine of the di-n propylacetic group are described. Finally, a summarized outline suggests that a possibility has now arisen in the sense of the theory of sets due to the contributions offered by cybernetic analysis and the theory of information, to find a language adaptable to psychopharmacology in its psychopathological applications. (German & Spanish summaries) (2 p. ref.)—*English abstract.*

10169. Sonenreich, Carol; de Souza Corrêa, Reinaldo, & Martins, Clóvis. **O metronidazol no tratamento do alcoolismo.** [Metronidazol in the treatment of alcoholism.] *O Hospital*, 1968(Nov), Vol. 74(5), 1453-1470.—Reports the therapeutic effects of metronidazol on 86 male and 6 female alcoholics in diverse states (delirium, agitation, confusion): 15% continued to drink, 51% abstained between 10 and 60 days, and 34% remained sober more than 60 days. Of the various factors (time of administration of remedy, S's age, previous hospitalization, familial antecedents), the chronicity of the alcoholic intoxication and the severity of the symptomatology proved to be the most significant determinants. (48 ref.)—*H. Singer.*

10170. Vacastor, L., Lehmann, H. E., & Ban, T. A. (Douglas Hosp., Verdun, Quebec, Canada) **Side effects and teratogenicity of lithium carbonate treatment.** *Journal of Clinical Pharmacology & the Journal of New Drugs*, 1970(Nov), Vol. 10(6), 387-389.—In the course of a clinical trial with lithium carbonate in patients suffering from periodic affective disorders, side effects occurred such as tremor and diarrhea. Generalized maculopapular rash and alopecia occurred in 1 patient each, and a toxic confusional state in 4. 1 patient delivered a malformed baby, and restriction of salt intake, administration of a diuretic, and an overdose of lithium induced a severe but reversible comatose state with generalized and focal convulsions.—*Journal summary.*

10171. Warlick, Lawrence H. (U. California, Medical

School, Los Angeles) **Lithium carbonate in the treatment and prophylaxis of recurrent affective disorders: Long term follow-up.** *Bulletin of the Los Angeles Neurological Societies*, 1970(Oct), Vol. 35(4), 169-180.

—Reports on the treatment of 40 patients in private practice in 2 groups, and 9 controls, followed for a 4-63 mo. period, median length varying from 1 yr. to 19 mo. "Patients were referred by private physicians and state hospitals for lithium treatment. All... had a well-documented history of recurrent affective disorder with at least 2 episodes prior to initiation of lithium therapy." 29 patients were treated for acute mania in a hospital setting and were followed up as outpatients. Of 11 others treated prophylactically, 6 had a cyclic disorder and 5 had a history of recurrent, endogenous, noncyclic depressive episodes. Controls were 9 patients "with recurrent affective disorders who were followed in psychotherapy with occasional use of medications and ECT." A composite of data sources was used to make excellent, moderate, and poor ratings. There were "uniformly good" results with the experimental group; prophylactic treatment also was indicated, lithium was not an antidepressant, and improvement was better with "thought disorder... in 'harmony' with... mood rather than in dissociated states of thoughts and feelings." The general trend of results is congruent with other clinical investigations.—*I. N. Mensh.*

10172. Weiss, Gabrielle, et al. (Montreal Children's Hosp., Quebec, Canada) **Comparison of the effects of chlorpromazine, dextroamphetamine and methylphenidate on the behaviour and intellectual functioning of hyperactive children.** *Canadian Medical Association Journal*, 1971(Jan), Vol. 104(1), 20-25.

—Tested the effects of drugs on 139 6-12 yr. old hyperactive children in an uncrossed double-blind study. Chlorpromazine (C), dextroamphetamine (D), and methylphenidate (M) were significantly superior to placebo in producing overall improvement in behavior. C was effective in reducing hyperactivity in most Ss, but had no demonstrable effect on distractibility, aggressivity, or excitability. D and M produced more goal-oriented behavior and reduced distractibility. M was the most effective of the drugs in producing exceptional improvement. All 3 active drugs had to be discontinued in a few Ss due to side effects, and not all Ss were benefited by the drugs. No background variables (with the exception of mother-child relationship) were found in this study to predict favorable response to the drugs. (French summary) (26 ref.)—*Journal abstract.*

10173. Wheatley, David. (General Practitioner Research Group, Twickenham, England) **Comparative trial of a new mono-amine oxidase inhibitor in depression.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 573-574.—Results of a trial involving 92 depressed patients indicate that both therapeutic effects and side effects were similar with M and B 9302 (N-3-(2,4-dichlorophenoxy) propyl-N-methylprop-2-ynylamine hydrochloride), a new MAO inhibitor reported to be a highly potent antidepressant, and the control drug, imipramine. Since the test drugs necessitate strict adherence to dietary restriction, neither is recommended for use in general practice.—*R. L. Sulzer.*

10174. Wilson, I. C., et al. (Dorothea Dix Hosp., Research Div., Raleigh, N.C.) **Thyroid-hormone enhancement of imipramine in nonretarded depressions.** *New England Journal of Medicine*, 1970(May), Vol. 282(19), 1063-1067.—Enhanced the speed and

efficacy of imipramine in the treatment of clinical depression by the addition of tri-iodothyronine to the treatment program. 20 male and female patients, less than 60 yr. old, with severe primary depression, were studied. Tri-iodothyronine, 25 μ gm. daily, added to imipramine, 150 mg/day, significantly improved performance on the Hamilton Rating Scale and the Self-Rating Depression Scale as compared to that in Ss receiving imipramine and a placebo. Morbidity and duration of hospitalization were diminished. Ss were euthyroid according to conventional clinical and laboratory criteria. The hormone quickened ankle reflex time and suppressed levels of protein-bound iodine. These physiologic changes, though definite, were slight and within the limits of euthyroidism as usually defined. (24 ref.)—*Journal abstract.*

HOSPITAL CARE & INSTITUTIONALIZATION

10175. Altman, Michael. (U. Colorado, Medical Center, Denver) **Mothers and children on psychiatric wards: II. The benefits of admitting infants with their mothers.** *Hospital & Community Psychiatry*, 1968(Nov), Vol. 19(11), 356-359.—Reviews the literature on the advisability of admitting infants with their mothers to a psychiatric ward and describes 2 illustrative cases. 1 patient was a 20-yr-old woman with an obsessive-compulsive character with marked dependency features, who cared for her baby on the ward for 1½ wk. with virtually no problems, although it was discovered later that she had sealed over many feelings. The 2nd patient was a 24-yr-old woman with an obsessive-compulsive character with hysterical features. She was diagnosed as having a postpartum schizophrenic break with paranoid and depressive features. She did not handle her baby well during an initial 11-day ward visit, feeling that the staff was more interested in the baby than in her. Another visit with the baby 2 wk. later, however, went well. A questionnaire concerning staff reaction is described. Data indicate that most staff members were in favor of having mother-child pairs on the ward.—*B. A. Burkard.*

10176. Callicutt, James W. (Brandeis U., Florence Heller Graduate School for Advanced Studies in Social Welfare) **Timetables in the career of the psychiatric patient.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1900.

10177. Clark, David H. & Myers, Kenneth. (Fulbourn Hosp., Cambridge, England) **Themes in a therapeutic community.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 389-395.—Describes a 60-bed therapeutic community in the male and female disturbed wards of an 800-bed general psychiatric hospital in England. From 1964-1969, there were 566 admissions of 267 persons. Characteristics and customs are analyzed. Frequent themes of community preoccupation were rejection, violence, sexuality, staff divisions, dependence-independence, and relations with outside bodies.—*Journal summary.*

10178. Cripe, Richard V. (Ft. Logan Mental Health Center, Denver, Colo.) **Individualized treatment: A problem in institutional care.** *Journal of the Fort Logan Mental Health Center*, 1968(Fal), Vol. 5(2), 61-67.—Examines the treatment needs of patients admitted to an adult psychiatric program in a state hospital. The therapeutic community treatment used was oriented towards patients who could benefit from, and respond to, a short-term, intensive, counter-dependent program,

followed by supportive outpatient care or community placement. This approach, however, was not appropriate for patients (a) for whom placement was the only realistic goal; (b) who failed the program; (c) who could return to the community, but might benefit from additional long-term therapy; and (d) with a character disorder. It is concluded that "a mental health facility should avoid ideological decisions that establish 1 treatment as superior to any other and that necessarily limit the available choices for treating any given patient."—*S. Knapp.*

10179. Dewdney, Selwyn. (Westminster Hosp., London, Ontario, Canada) **The role of art activities in Canadian mental hospitals.** *Bulletin of Art Therapy*, 1969(Jan), Vol. 8(2), 57-66.—Reports results of a survey of the uses made of art in 56 Canadian psychiatric institutions and hospital units. Data indicate that 19 hospitals assigned no psychiatric role to art activities; 1 used art solely for diagnosis; 19 made no diagnostic use of art; 17 used art diagnostically and therapeutically; 19 placed art activities under the exclusive direction of the occupational therapy department; and in 18, art activities were conducted by staff personnel. The relevance of findings to the future of art therapy in Canada and the United States is discussed.—*Journal abstract.*

10180. Driemen, Pearl M. & Minard, Carol C. (Metropolitan State Hosp., Norwalk, Calif.) **Preleave planning.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 87-90.—Observed 112 state hospital mental patients on 2 regionalized wards from 1967-1969 during hospitalization and while on leave of absence. The return rate dropped from the usual 40-70% to 9.8%. Ss were followed by the same professional team, received psychotropic drugs, were offered long-term psychotherapy, family therapy, and assistance with financial, living, and vocational plans. Better communication between the mental hospital and its community was felt to be a significant factor in the sharp reduction of readmission rates.—*Journal abstract.*

10181. Faux, Eugene J. & Crawford, Blaine. (Utah State Hosp., Provo) **Deaths in a youth program.** *Mental Hygiene*, 1970(Oct), Vol. 54(4), 569-571.—*A. M. Cawley.*

10182. Gerhardt, Sidney. (Hall-Brooke Hosp., Westport, Conn.) **The evolution of a patient government.** *Hospital & Community Psychiatry*, 1968(Oct), Vol. 19(10), 329-330.—Describes weekly meetings, held to plan recreational activities for patients, which evolved into what became known as "town meetings." The focus changed from planning activities to evaluating hospital programs in terms of giving patients more responsibility. The presiding officer, a patient, followed a 5-point procedure which is described. Communication problems between staff and patients and between various age groups are discussed. Several patients demonstrated socially responsible attitudes by returning to help other patients after discharge.—*B. A. Burkard.*

10183. Hartlage, Lawrence C., Freeman, William, & Horine, Louise. (Associated Psychological Services, Louisville, Ky.) **An analysis of discharge procedures.** *Hospital & Community Psychiatry*, 1968(Oct), Vol. 19(10), 307-310.—Discusses hospital discharge procedures and ways in which they can be made more efficient. Reasons for the conceptual confusion concerning discharge from a psychiatric hospital are detailed. In addition to deciding on the health of the patient before discharge, the hospital must also consider his ability to fit into the community. A suggested discharge procedure includes

interviews with physician and social worker, and visits to the hospital collections office, pharmacy, and medical records department.—*B. A. Burkard.*

10184. **Hecker, Arthur O. & Wright, Eleanore R.** (Embserville State Hosp., Pa.) **Reassessing hospital treatment practices.** *Hospital & Community Psychiatry*, 1968(Nov), Vol. 19(11), 362-363.—Describes patient reaction in a rural state hospital to crisis situations involving fewer than usual staff members being on duty. It was found that patients responded well to the additional responsibility for themselves and other patients, suggesting that traditional hospital policies should be reviewed. These reactions were similar to those noted during a former period of open-door wards. Results of the review indicate that (a) the average stay of mental patients could be shortened in many cases, (b) "the use of psychotropic drugs and activity assignments within 24 hr. of admission are the 2 most significant factors in the early release of patients," (c) "group psychotherapy is of little significance in shortening hospital stay," (d) weekend visits outside the hospital prolong hospitalization, (e) many long-term patients, although not entirely well, can function in simple community jobs, and (f) patient-aide ratios should depend on the amount of ward activity and responsibility given to patients.—*B. A. Burkard.*

10185. **Kornfeld, Donald S.** (Columbia-Presbyterian Medical Center, Psychiatric Consultation Service, New York, N.Y.) **Psychiatric view of the intensive care unit.** *British Medical Journal*, 1969(Jan), Vol. 1(5636), 108-110.—Describes the impact on patients and staff of the environment of intensive care units for the treatment of critically ill patients. Problems likely to be encountered include those produced by (a) the serious medical-surgical illness, itself; (b) the unique environment of the unit; (c) reactions that manifest themselves in the patient following discharge from the unit; and (d) the emotional reactions of the professional staff working on the unit. Suggestions for reducing these problems are presented, and include providing relief for floor nurses during the course of the day, regular meetings of both nursing and medical staff, and developing clear guide lines for areas of professional responsibility.—*I. Halev.*

10186. **Kritzer, Herbert & Pittman, Frank S.** (U. Colorado, Medical Center, Denver) **Overnight psychiatric care in a general-hospital emergency room.** *Hospital & Community Psychiatry*, 1968(Oct), Vol. 19(10), 303-306.—Describes an emergency psychiatric service, located in a general hospital, with access to the emergency room's 9 beds for overnight care. 3rd-yr residents are assigned full time for 3 mo. Of 270 patients who came to the emergency room during a 2-mo period, 36 (13%) were considered primarily psychiatric patients. 13 were admitted because of suicide attempts, 4 for evaluation and treatment after threatening suicide, 7 for diagnostic evaluation, 6 because of destructive behavior, 4 because of overdose of drugs, and 2 because of alcoholic intoxication. Psychiatric hospitalization usually carries a stigma and proceeds slowly, disrupting job and family life. It was found that patients and their families did not consider the overnight service as psychiatric hospitalization. It is suggested that brief "hospitalizations usually correlate with short rehospitalizations and better interim functioning." The service is also helpful in training psychiatric residents.—*B. A. Burkard.*

10187. **Levai, Marian & Pinsky, Henry.** (New York Medical Coll., Metropolitan Hosp. Community Mental

Health Center, N.Y.) **Mothers and children on psychiatric wards: I. The value of permitting children to visit on wards.** *Hospital & Community Psychiatry*, 1968(Nov), Vol. 19(11), 354-356.—Describes a psychiatric ward of a municipal hospital which houses 25-35 women of all ages which has encouraged contact between hospitalized mothers and their children for the past 2 yr. Extra personnel were not needed and initial fears that the children would be an added responsibility or might be harmed were not realized. Patients whose illnesses involved their children seemed to benefit most. Other patients seem happy to have the children around and the children were bothered only by angry arguments between patients. Seeing mother and child together can provide valuable information concerning the mother's competency to care for her children. Emotional problems in some children were uncovered. No contraindications to the visits were discovered.—*B. A. Burkard.*

10188. **Lewis, Jerry M.** (Timberlawn Foundation, Research & Training, Dallas, Tex.) **The development of an inpatient adolescent service.** *Adolescence*, 1970(Fal), Vol. 5(19), 303-312.—Discusses factors which need to be considered in an adolescent hospital program. Emphasis is on the therapeutic value of peer group processes.—*A. B. Warren.*

10189. **Logan, Daniel L.** (U. Texas, Southwestern Medical School, Dallas) **A "paper money" token system as a recording aid in institutional settings.** *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 183-184.—Describes the use of paper money in the token economy system of a state hospital which remedies the problems of loss, theft, and trading. Color-coded denominations with a place for the patient's and attendant's names, the date, and the task reinforced are issued, the amount paid being based on the desirability of the patient's behavior. When the paper money is exchanged, it becomes part of the permanent records and can be used to provide rapid feedback on the classes and specific behaviors being reinforced and the number and kinds of behavior being reinforced by a given attendant.—*S. Knapp.*

10190. **Moos, Rudolf H.** (Stanford U., Medical School) **Differential effects of psychiatric ward settings on patient change.** *Journal of Nervous & Mental Disease*, 1970(Nov), Vol. 151(5), 316-321.—12 psychiatric patients were observed in and were asked to describe their reactions to 6 psychiatric ward subsettings (e.g., individual therapy, community meeting, free time, intake meeting, group therapy, and lunch time) both during their 1st or 2nd wk. of hospitalization and during the wk. before they left the ward. Results show that persons and person by setting interactions accounted for substantial proportions, whereas consistent differences between settings accounted for very little of the variance in change scores. This indicates that there are only small general differential effects of ward subsettings, but that settings elicit differential amounts of therapeutic change in different patients. Implications include that different psychiatric ward subsettings may be differentially beneficial to different groups of patients, that conclusions about therapeutic change drawn about a patient from observations in one setting may not be generalized to other settings, and that the findings bear on the upper limit of intercorrelations of different change scores obtained on the same individuals. (16 ref.)—*Journal abstract.*

10191. **Robin, A. A.** (Runwell Hosp., Wickford, England) **Distribution and origins of manpower and work-load in the psychiatric services.** *British Medical Journal*, 1969(Sep), Vol. 3(5673), 774-776.—Describes the "developments in medical manpower in the hospital services for adult psychiatry in 1 metropolitan hospital region with a population of just under 3½ million." Listed statistical facts are based on a census of the medical staff of the regional and teaching hospitals and the academic departments engaged in adult psychiatry for 1948, 1958, and 1968. It was found that a progressive increase in psychiatrists took place during the period covered by the census. The rate of increase was higher in the teaching than in the regional hospitals. The rate of increase for psychiatry for discharges and deaths from the hospitals in England was twice as great as for general medicine. Total outpatient attendance increased 3-5 times more rapidly in psychiatry.—*I. Halev.*

10192. **Silverstein, Arthur B.** (Pacific State Hosp., Pomona, Calif.) **A classification of research projects at Pacific.** *California Mental Health Research Digest*, 1969, Vol. 7(1), 17-19.—Provides an overview of the research program at Pacific State Hospital, including projects concerning: (a) biological abnormalities of the retarded; (b) psychological abnormalities of the retarded; (c) training, treatment, and habilitation; (d) hospital epidemiology and program evaluation; and (e) community-based research.—*A. M. Berg.*

10193. **Spear, Paul S. & Dorna, Linda L.** (San Diego State Coll.) **Variables related to visiting rate of hospitalized mental patients.** *Journal of the Fort Logan Mental Health Center*, 1968(Fal), Vol. 5(2), 77-83.—Compared the frequency with which 155 patients were visited with several variables, e.g., type of admission, age, diagnosis, and sex. Medical charts and visiting records were used as measures. It was found that close proximity to the hospital, rural residency, voluntary admission, number of admissions, and the number of children were positively related to visiting frequency. Ss from over 500 miles from the hospital, from urban areas, with a severe diagnosis, or who were involuntary admissions received fewer visits. Socioeconomic status, education, sex, religion, and marital status were not significant. Ss with several hospitalizations received more visits than those who were long-term patients. It is concluded that if community contact facilitates recovery, patients could benefit from more frequent and extended leaves in spite of the risk of subsequent readmission.—*S. Knapp.*

10194. **Tenbrunsel, Thomas W.** (St. Louis U.) **A group coupon economy program in treating mental illness: An experiment in social innovation.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3880.

10195. **Walk, Alexander.** (18 Sun Lane, Harpenden, England) **Lincoln and non-restraint.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 481-495.—Describes the conflict in the Lincoln Asylum and the press following Gardiner Hill's public proclamation of non-restraint as a new system in 1838. The new goals of nonrestraint, nonseclusion, and "exhilarating engagement" were not easily achieved, but the devoted work of pioneers engendered a new spirit among those seeking to introduce psychological measures in the treatment of insanity.—*R. L. Sulzer.*

10196. **Weiss, Henry H. & Pizer, Evan F.** (Dept. of Health & Social Services, Madison, Wis.) **Hospitalizing the young: Is it for their own good?** *Mental Hygiene*,

1970(Oct), Vol. 54(4), 498-502.—State hospitalization of young children may have long term deleterious effects: on reputation, self-concept, opportunities for self-determination, and social competence. Decision for hospitalization has much potential for harm, and should not be made lightly.—*A. M. Cawley.*

10197. **White, Warren & Bloch, Sidney.** (Royal Melbourne Hosp., Victoria, Australia) **Psychiatric referrals in a general hospital.** *Medical Journal of Australia*, 1970(May), Vol. 1(19), 950-954.—Studied 331 psychiatric consultations occurring over a 12-mo period in the medical and surgical wards of a general teaching hospital regarding the reason for psychiatric referral of the patient, psychiatric diagnosis, and the consultant's management. Ss with a "neurological" condition comprised almost 1/3 of the total, followed by alimentary, cardiac, and respiratory involvement. Ss were referred mainly from the medical wards. Attendance at a psychiatric outpatient department was recommended for 28.7% of the referrals; 26.3% received advice on appropriate use of drugs and other treatment. Implications of some of the findings are discussed, as well as the role of a psychiatric consultation service in the setting of a general hospital.—*Journal abstract.*

PSYCHOANALYTIC INTERPRETATION

10198. **Black, Stephen A.** (Simon Fraser U., Burnaby, British Columbia, Canada) **Whitman and psychoanalytic criticism: A response to Arthur Golden.** *Literature & Psychology*, 1970, Vol. 20(2), 79-81.—Criticizes Arthur Golden's analysis of Whitman's poetry. Conclusions regarding Whitman's poetry are summarized. Whitman's poetry is regarded by Miller as being an autobiographical self-analysis, originating in unconscious infantile sources, which result in "regressive imagery, fantasy, and the reactivation of infantile longings." It is suggested that Whitman transcended Freudian narcissism by means of adopting Marcusean narcissism. "The striking paradox that narcissism, usually understood as egotistic withdrawal from reality, here is connected with oneness with the universe, reveals the new depth of the conception: beyond all immature autoeroticism, narcissism denotes a fundamental relatedness to reality which may generate a comprehensive existential order." It is suggested that narcissism may be the source of the beginning of a new reality principle associated with libidinal cathexis of the ego leading to libidinal cathexis of the objective world.—*B. A. Stanton.*

10199. **Gould, Gerald L.** (City Coll., City U. New York) **The gate scene at Sotherton in "Mansfield Park."** *Literature & Psychology*, 1970, Vol. 20(2), 75-78.—Describes Freudian symbolism inherent in the action of characters during the scene at the gate at Sotherton, the family estate of Rushworth, in Jane Austen's novel, *Mansfield Park*. The gate, itself, is a locked gate (symbolic of the "chastity and propriety that are to be violated by Maria's adultery") which separates a wooded garden from hunting grounds and a moat. The positions which are taken by the characters in the novel in response to the gate are analyzed as being representations of attitudes toward sex and morality.—*B. A. Stanton.*

10200. **Levin, Gerald.** (U. Akron) **Lovelace's dream.** *Literature & Psychology*, 1970, Vol. 20(3), 121-127.—Discusses the character of Lovelace as revealed through his dream content in Samuel Richardson's

Clarissa. The character of Clarissa is discussed as that of a masochistic female who compliments a sadistic sexual male. It is noted however, that Lovelace's pursuit of Clarissa results from a specific form of masochism which is masked by his professed sadism. This particular type of masochism was originally labeled as "moral masochism" by Freud.—*B. A. Stanton.*

10201. Moreno, Antonio. (Dominican House of Studies, Oakland, Calif.) **Jung, gods, and modern man.** Notre Dame, Ind.: U. Notre Dame Press, 1970. xiii, 274 p. \$7.95.

10202. Moss, Judith P. **The body as symbol in Saul Bellow's "Henderson the Rain King."** *Literature & Psychology*, 1970, Vol. 20(2), 51-61.—Presents an analysis of the character of Henderson in Saul Bellow's *Henderson the Rain King*. "... Henderson's process of coming to terms with himself is mirrored in his coming to terms with his own body, its demands and its limits." Henderson's psychological disorders resemble conversion hysteria with primarily oral psychosomatic manifestations (i.e., aching gums, sublingual gland pain, facial flushing) and anal psychosomatic manifestations (i.e., aggressiveness, hemorrhoids, and accident proneness). Disorders within Henderson's personality include: (a) extreme dependency needs and id-dominated ego, (b) inability to control aggressive impulses, and (c) inability to accept the mortality of man. Henderson's extreme acquisitiveness is discussed as a substitute for nourishment from a loving mother.—*B. A. Stanton.*

10204. Robertello, Richard C. (49 E. 78th St., New York, N.Y.) **Penis envy.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 204-205.—Attempts to clarify the concept of penis envy in psychoanalysis. Penis envy is described as a fairly common problem in neurotic women, but a psychopathological development rather than an inevitable occurrence in the life of a female child. Early and severe toilet training and preference for a male sibling by the parents, especially the mother, are seen as bearing direct causative relationships to penis envy. "Cultural factors can accentuate preference for male children, but personal psychological problems in the parents are often as important or more important." 2 clinical examples are presented.—*S. Knapp.*

10205. Robison, Paula. (Temple U.) **Svevo: Secrets of the confessional.** *Literature & Psychology*, 1970, Vol. 20(3), 101-114. Illustrates Italo Svevo's concern with Oedipal themes using passages from *Confessions of Zeno* and *Further Confessions of Zeno*. Phrases symbolizing fears of castration and patricide are discussed. An attempt is made to depict the contrast between the child's exterior and his suppressed aggressive desires.—*B. A. Stanton.*

10206. Sandler, J., Holder, A., & Dare, C. (Inst. of Psychiatry, London, England) **Basic psychoanalytic concepts: VI. Acting out.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 329-334.—Acting out has suffered a great extension and change of meaning since it was introduced by Freud in 1905. Starting as a legitimate form of resistance, it has come to cover delinquent behavior and all kinds of pathologic and impulsive actions. Perhaps the proper use of the concept should be linked to those situations in which an intense relationship, in therapy or otherwise, fosters a tendency to a revival of earlier, especially infantile, states and impulses.

Enactments of such states would be correctly referred to as acting out. (33 ref.)—*R. L. Sulzer.*

PSYCHODIAGNOSIS

10207. Adams-Webber, J. R. (Brock U., St. Catherine's, Ontario, Canada) **Elicited versus provided constructs in repertory grid technique: A review.** *British Journal of Medical Psychology*, 1970(Dec), Vol. 43(4), 349-354.—Several forms of repertory grid test in current use involve the procedure of supplying the same standard list of dimensions to all Ss in contrast to G. A. Kelly's original method of eliciting a set of personal constructs from each S. A review of studies in which supplied and elicited constructs were directly compared in various contexts led to the conclusion that, although normal Ss prefer to use their own elicited constructs to describe themselves and others, both kinds of dimensions seem to be functionally similar when grid technique is employed to assess structural features of their cognitive systems. However, there is some evidence that neurotics may apply their own elicited constructs more differentially than supplied dimensions in the grid task. (41 ref.)—*Journal summary.*

10208. Anthony, Nicholas. (Forbes Air Force Base, 313 Tac Hosp., Kan.) **Comparison of clients' standard, exaggerated, and matching MMPI profiles.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 100-103.—Investigated the manner in which clients exaggerate the MMPI: (a) whether malingering indices developed on normals could detect clients' exaggeration, (b) whether D. N. Wiener's subtle and obvious items could detect malingering, and (c) whether malingered profiles were distinguishable from valid matching profiles. 40 United States Air Force male clients took standard MMPIs and exaggerated retests. 32 exaggerated retests were matched with similar valid profiles. Findings were: (a) exaggerated retests differed ($p < .01$) from the standard tests on all measures; (b) malingering indices discriminated ($p < .001$) the standard from the exaggerated retests; (c) subtle and obvious items differentiated the standard from the exaggerated retests ($p < .001$), but not the exaggerated from the matching profiles; and (d) F raw score ($p < .02$), F-K ($p < .05$), and Ds ($p < .05$) indices discriminated the exaggerated from the matching profiles. (20 ref.)—*Journal abstract.*

10209. Baer, Eva; Davitz, Lois J., & Lieb, Renee. (Beekman Downtown Hosp., New York, N.Y.) **Inferences of physical pain and psychological distress: I. In relation to verbal and nonverbal patient communication.** *Nursing Research*, 1970(Sep), Vol. 19(5), 388-392.—Studied inferences by 25 nurses, 25 social workers, and 24 physicians concerning patients' physical pain and psychological distress, in relation to verbal and nonverbal communication, using an instrument consisting of 16 paired vignettes describing a variety of patients. Each patient appeared in 2 different situations, 1 in which pain or discomfort was verbalized, and 1 in which it was expressed in action. The various verbal and nonverbal items were randomly distributed throughout the questionnaire. Results indicate significant differences between groups. Nurses and physicians inferred least pain and social workers inferred the most. Findings are discussed in terms of their relevance in practice.—*Journal abstract.*

10210. Day, Merle E. (Veterans Administration Hosp., Downey, Ill.) **Don't teach till you see the direction of their eye movements.** *Journal of Special Education*, 1970(Spr), Vol. 4(2), 233-237.—Presents a clinical diagnosis of individual differences in the direction of eye movements. When people break eye contact, they make a lateral eye movement either to the left or right. The direction of the movement is characteristic of the individual. Clinical observations suggest a relationship between direction and personality traits. Right movers tend to be assertive and practical, whereas left movers stress subjectivity and the importance of feeling rather than action. Certain psychosomatic syndromes are more highly correlated with either right or left movers. No sexual differences are noted in the tendency to move the eyes in one direction or the other.—L. M. Glidden.

10211. Eysenck, H. J. (Inst. of Psychiatry, London, England) **The classification of depressive illnesses.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 241-250.—Argues that the difference between the Newcastle and London schools on the classification of depressive illnesses in terms of 1 or 2 dimensions is based on a misunderstanding of the issues involved and the logic of the statistical methods. "There are 2, not 1, problems involved, relating (a) to the unitary or binary nature of depression, and (b) to the categorical or dimensional nature of these illnesses. Factor analysis is relevant to (a), and conclusively favours the binary view; distribution of scores is relevant to (b), and cannot throw any light on the binary-unitary problem." The preferred solution to classification is to give each patient 2 scores, representing positions on 2 dimensions, the reactive and endogenous continua. (34 ref.)—R. L. Sulzer.

10212. Federici, F. & Quattrini, A. (U. Perugia, Nervous & Mental Illness Clinic, Italy) **Un test di sensopercezione per lo studio della traccia mnemonica in soggetti con gravi disturbi della memoria.** [A sensory-perception test for a correct evaluation of severe loss of memory.] *Rivista di Neurobiologia*, 1968(Oct), Vol. 14(4), 564-572.—Devised a sensory perception test which is of value in various kinds of memorization: short-term, long-term, experimental, and conceptual. The test has the following parts: (a) representations of intrinsic perception (e.g., sees various interpretations of the human face and must choose when the features are recognizable); (b) number and series identification (e.g., recognizing the absence of a number in the series 8, 24, 32; (c) time evaluation; (d) memory of meanings; and (e) memory of verbal symbols. The test differs from others in that it is discriminating on a localized level and it is applicable to all Ss with serious memory disorders. It evaluates the capacity of the memory in every possible form of memorization. When an S is repeatedly unable to see the features in the "human face" series, it is indicative of a hemispherical lesion. Thus the test may be used to determine the possible pathological contributions of amnesia.—A. M. Farfaglia.

10213. Goodwin, Donald W., Alderson, Philip, & Rosenthal, Randall. (Washington U., Medical School) **Clinical significance of hallucinations in psychiatric disorders.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 76-80.—Reports that of a consecutive series of 117 psychiatric inpatients with hallucinations, all had primary affective disorder, schizophrenia, alcoholism, organic brain syndromes, or hysteria. Hallucinations were found to be nonspecific. Most Ss who had hallucinations involving 1 sensory modality had ex-

perienced past hallucinations involving other sensory modalities. The hallucinations accompanying acute schizophrenia more closely resembled those seen in affective disorder than in chronic schizophrenia, but no type of hallucination was diagnostic in the sense of occurring significantly more often in 1 illness than in another. Auditory hallucinations occurred almost as often in affective disorder as in schizophrenia; visual hallucinations were common in all 5 disorders; and derogatory voices, widely believed to signify depression, occurred most often in schizophrenia. (21 ref.)—*Journal abstract*.

10214. Hamlin, Roy M. & Lorr, Maurice. (Veterans Administration Hosp., Danville, Ill.) **Differentiation of normals, neurotics, paranoids, and nonparanoids.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 90-96.—Compared objective tests and symptom ratings in differentiating psychopathology. A univariate and 2 discriminant function analyses were carried out with 30 measures on 61 normals, 45 neurotics, 31 paranoids, and 71 nonparanoid schizophrenics. Considered separately, objective tests of psychomotor speed, cognition, and social perception all differentiate the 4 comparison groups. When symptom ratings are included in the discriminant function analysis, however, only the cognitive tests make a unique contribution not covered by the ratings. Results suggest a basic cognitive deficit, not accounted for entirely by bizarre associations, social isolation, or apathetic motivation.—*Journal abstract*.

10215. Kostrowski, Janusz. **Problem rzetelności i trafności skali Psyche Cattell.** [Reliability and validity of the Psyche Cattell Infant Intelligence Scale.] *Roczniki Filozoficzne: Annales de Philosophie*, 1969, Vol. 17(4), 145-164.—Presents a study based upon Polish standardization of the scale. The sample for the standardization was drawn from 10 districts and included 1530 children from 2-30 mo. old. The authors own investigation comprises a sample of 52 youngsters 8 mo. to 7 yr. old diagnosed as mentally retarded due to Downs syndrome. It is concluded that Cattell's Infant Intelligence Scale is a stable instrument for testing mentally retarded children. (English summary) (22 ref.)—J. Holowinsky.

10216. Lorr, Maurice & Hamlin, Roy M. (Catholic U. of America) **Estimation of the major psychotic disorders by objective test scores.** *Journal of Nervous & Mental Disease*, 1970(Sep), Vol. 151(3), 219-224.—Recent research has established behavioral definitions of 5 major psychotic disorders: schizophrenic disorganization, paranoid process, hostile paranoia, psychotic depression, and disorganized hyperactivity. The present study attempted to determine how well each of the disorders could be estimated from objective measures of psychomotor and cognitive performance, test situation behavior, and free verbalization. A broad sample of 125 psychotics were administered 15 objective tests and rated on the Inpatient Multidimensional Psychiatric Scale, a standardized interview schedule. The regression analysis was applied in 2 stages to estimate the 5 disorders. Objective test scores and behavioral indicators were applied as predictors. Findings indicate that all disorders except hostile paranoia could be estimated rather well from just a few objective test scores. When the 4-min verbalization measures were added, the multiple correlations were substantially enhanced for all criteria except paranoid process. Results suggest that a brief objective test battery, supplemented by the recorded verbalization

test, could be used to measure the major psychotic behavioral dimensions.—*Journal abstract.*

10217. Love, Henry G. (Porirua Hosp., New Zealand) **Validation of the Hooper Visual Organization Test on a New Zealand psychiatric hospital population.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 915-917.—Reports a validation study of the Hooper Visual Organization Test on 115 Ss. Results indicate that the test should not be used with Ss having IQs less than 75 and that excluding these, there is a 14.5% false positive result for nonorganic Ss and a 25% false negative result for organic Ss.—*Journal abstract.*

10218. Mann, Edward T. (New Jersey Coll. of Medicine & Dentistry, Jersey City) **Use of the KTSA as a technique for assessing intelligence and psychodynamics in drug addicts.** *International Journal of Symbolology*, 1969(Dec), Vol. 1(2), 57-66.—Investigated the relationship between the Kahn Test of Symbol Arrangement (KTSA) and WAIS and sensitivity of the KTSA in assessing character and behavior disorders in a group of 40 male drug addicts. The usefulness of the supplemental KTSA questionnaire and Object Sorting task was also evaluated. Of the 42 correlations calculated between the KTSA and WAIS, only 6 were significant; easily possible through chance. The clinical features as well as the dynamic material resulting from the supplemental instruments seemed to conform to the performance expected of those diagnosed as "character and behavior disorders with neurosis" established by previous research. In the case of several Ss, the question of underlying schizophrenia was raised. It is concluded that quantitative examination of selected objective KTSA variables revealed strong trends consistent with clinical observations regarding the personality features seen in the drug addicted.—*Journal abstract.*

10219. Miller, Jerome G. (Commonwealth of Massachusetts, Dept. of Youth Services, Boston) **The latent social functions of psychiatric diagnoses.** *International Journal of Offender Therapy*, 1970, Vol. 14(3), 148-156.—Notes that since the clinician is concerned with norms, he is inevitably involved with social control, e.g., the court psychiatry. The latent functions of a diagnosis often differ from its stated purpose, and by side-tracking criticism aid social control. The diagnosis may offer society the scientific sanction to disregard its own inconsistencies. It is concluded that the professional should mediate between the persons in need of help and society, furthering the adjustment of the former and helping in the evolution of the latter. (French, German, & Spanish summaries)—*Journal summary.*

10220. Pound, Frederick E. (U. Oklahoma) **Differentiating psychotic, delinquent, and cerebral palsied adolescents on the basis of letters from mothers.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3874.

10221. Richter-Heinrich, Elisabeth & Läuter, J. (German Academy of Sciences, Inst. of Cortico-Visceral Pathology & Therapy, Berlin, E. Germany) **A psychophysiological test as diagnostic tool with essential hypertensives.** *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 153-168.—Administered a battery of tests to groups of essential hypertensives in Stages I (N = 40) and II (N = 30) of degree of severity and 30 normal controls. Hypertensives, compared to normotensives, showed a heightened sympathetic activity as a response to stress and weak acoustic stimuli, low acoustic thresholds, diminished acoustic adaptation and

mental concentration. The recordings of systolic and diastolic blood pressure, heart rate, and GSR in rest and during mental arithmetic and sentence completion tasks in 100 Ss were assessed using a discriminant analysis and employed as a screening device for the 3 diagnostic groups. 2 discriminant functions were calculated in order to place every individual into 1 of the groups. Special statistical procedures made it possible to reduce the computing load, thus allowing clinical application of the test. (30 ref.)—*Journal summary.*

10222. Rubin, Leonard S. (Eastern Pennsylvania Psychiatric Inst., Philadelphia) **Pupillary reflexes as objective indices of autonomic dysfunction in the differential diagnosis of schizophrenic and neurotic behavior.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Sep), Vol. 1(3), 185-194.—Reports the results of several experiments which suggest the utility of measurements of pupillary reactivity in the differential diagnosis of psychotic and neurotic behavior. Several parameters of the pupillographic responses to light and darkness significantly differentiated schizophrenics who were either actively psychotic or in clinical remission from normal Ss. Even those few actively psychotic patients (7%) and patients in clinical remission (25%) who showed normal pupillary light and dark reflexes at rest were all demonstrably aberrant either during the stress engendered by cold or following its termination. Neurotic Ss were indistinguishable from normal Ss at rest and in responses to stress, but following the termination of stress, continued to show the effects of stress. (15 ref.)—*Journal abstract.*

10223. Rützel, E. (U. Hamburg, Inst. of Psychology, W. Germany) **Die Brauchbarkeit des MMQ im deutschen Sprachraum: Auswertungs- und Interpretationshilfen.** [The usefulness of the MMQ in German-speaking areas: Aids to scoring and interpretation.] *Psychologie und Praxis*, 1970(Apr), Vol. 14(2), 64-78.—Tables are presented giving means on the Maudsley Medical Questionnaire (MMQ) based on samples with German and British Ss. On the Neuroticism scale, German means were higher than British ones. The MMQ did not as clearly differentiate normal from neurotic Ss for the German version. Mean correlation between the Neuroticism and Lie scales was estimated at .40 (N = 1725). A regression transformation shows that corrections are needed for the points on the Neuroticism scale depending on the Lie scale values. A table is given for this correction.—*R. F. Wagner.*

10224. Schmideberg, Melitta. (Assn. for Psychiatric Treatment of Offenders, London, England) **Socio-legal consequences of psychiatric diagnoses in U. S. A. and Britain.** *International Journal of Offender Therapy*, 1970, Vol. 14(3), 157-172.—Describes the dangers of institutionalization and improper diagnoses in an evaluation of the status of modern psychiatry. 19 case examples are presented to illustrate the need for legal protection of patients in mental hospitals, the dangers of the improved image of mental hospitals, the difficulties of sanity hearings, and the dangers of the multiple reports containing personal data. Arbitrary, vague, and perfunctory diagnoses and their suggestive effects are emphasized. The need for a realistic concept of normality and the effect of the increasing power of experts on the working of democracy are discussed. (French, German, & Spanish summaries)—*S. Knapp.*

10225. Schwartz, Melvin L. & Cahill, Robert. (Wayne State U.) **Personality assessment in myasthenia**

gravis with the MMPI. *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 766.—Administered the MMPI to 7 males and 10 females with myasthenia gravis (MG). Mean T-score values showed a 321-8 code profile. The schizophrenia scale for all Ss and the hypochondriasis scale for males showed higher than normal scores. Results are discussed in terms of the physical aspects and emotional reactions to the illness.—S. Knapp.

10226. Watson, Charles G. (Veterans Administration Hosp., St. Cloud, Minn.) **An MMPI scale to separate brain-damaged from schizophrenic men.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 121-125.—Developed 3 MMPI scales: (a) an unweighted scale consisting of 80 items differentially endorsed by 61 organics and 65 schizophrenics at a Veterans Administration psychiatric hospital, (b) the same items weighted as a function of their differentiating power, and (c) a short form consisting of the 30 most powerful items weighted in accordance with their differentiating strength. Scales were cross-validated in a state hospital population and a general medical and surgical Veterans Administration hospital. Results indicate that the scales differentiate male organics from schizophrenics but are of dubious value among female populations. (16 ref.)—*Journal abstract*.

10227. Willis, Jerry. (Jefferson County Health Dept., Birmingham, Ala.) **Group versus individual intelligence tests in one sample of emotionally disturbed children.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 819-822.—Compared IQs obtained on a group intelligence test (Lorge-Thorndike Intelligence Test) with those obtained on an individual intelligence test (WISC) for 20 disturbed children. While the correlation between the scores was .81, the mean IQs were significantly different (93 vs. 108), group test tending to give much lower IQs.—*Journal abstract*.

BEHAVIOR DISORDER

10228. Cormier, Bruno. (McGill U., Montreal, Quebec, Canada) **Passage aux actes délictueux et états dépressifs.** [Acting-outs and depressive states.] *Acta Psychiatrica Belgica*, 1970(Jan), Vol. 70(1), 103-153.—Explains the genesis, the evolution, and the end of psychopathological behavior by stressing the depressive components. Attributes acting-out and psychopathic behavior to social, individual, and constitutional factors and divides criminal delinquency into 3 psychopathic syndromes: (a) Primary delinquency, which is correlated to a very weak ego and an unstable defense mechanism, this delinquency manifests itself in an individual's latency period and leads to a permanent psychopathic state. (b) Secondary delinquency which is associated with a stronger defense mechanism and occurs in individuals who have reached puberty. (c) The late delinquency which deals with personality disorder and a stronger, but collapsible, defense mechanism.—I. Sirotnin.

10229. Lindsay, Mary K. (Dept. of Correction, House of Detention for Women, New York, N.Y.) **Prostitution: Delinquency's time bomb.** *Crime & Delinquency*, 1970(Apr), Vol. 16(2), 151-157.—To solve the problem of prostitution, it is proposed that the sentences be sufficiently long with a heavy concentration on treatment and the use of halfway houses.—M. P. Edwards.

10230. Raffalli, Henri C. **The battered child: An overview of a medical, legal, and social problem.** *Crime & Delinquency*, 1970(Apr), Vol. 16(2), 139-

150.—In order to protect the battered child without infringing upon the rights of parents, it is suggested that severe parent-child conflicts be identified before they result in the child's injury or death.—M. P. Edwards.

Drug Addiction

10231. ———. **Energetic treatment of addicts.** *British Medical Journal*, 1969(May), Vol. 2(5653), 331.—The Advisory Committee on Drug Dependence issued a report where treatment of drug addicts is opposed to their "maintenance." The high mortality and morbidity of heroin indicate that both the medical profession and social agencies have an inescapable responsibility to provide treatment. It is suggested that 2 initial hostels, one for each sex, should be constructed in the metropolitan area, where homeless addicts would live while undergoing rehabilitation. It is suggested that later a hostel for rehabilitation of addicts who have completed treatment be established. Sufficient resources, together with substantial numbers of trained staff, must be provided, otherwise drug addiction may continue to increase. It is queried whether the provision of facilities for energetic treatment is enough, or if some degree of coercion must be introduced.—I. Halev.

10232. Caroff, Phyllis; Lieberman, Florence, & Gottesfeld, Mary L. (Hunter Coll., School of Social Work, City U. New York) **The drug problem: Treating preaddictive adolescents.** *Social Casework*, 1970(Nov), Vol. 51(9), 527-532.—Suggestions for treatment involve choosing therapists who are convinced drugs are destructive. Parents must be involved in treatment, and their authority strengthened so that proper care and vigilance can be maintained. The therapist must also discourage the repeated discussion of drugs since this only helps the child to relive the drug experience.—M. W. Linn.

10233. Chynoweth, R. (U. Queensland, Brisbane, Australia) **The problem of drug dependency.** *Australian Occupational Therapy Journal*, 1969(Oct), Vol. 16(4), 9-13.—Describes the problem of drug dependency in 3 sections: alcoholism, which occurs predominately in males; barbiturate dependency, which occurs predominately in females in early middle life; and narcotics dependency, which occurs predominately in teenagers of both sexes. The incidence of dependency, symptoms, and treatment are described. It is concluded that until other causative factors are discovered, drug dependency must be regarded as a socially acquired illness, and the reasons for this behavior and its prevention are the responsibility of the society.—S. Knapp.

10234. DeMeritt, Mary W. (Arizona State U.) **Differences in the self-concept of drug abusers, non-users, and former users of narcotics and/or non-narcotic drugs.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1008.

10235. Kromberg, Carol J. & Proctor, Judith B. (Connecticut Mental Health Center, New Haven) **Methadone maintenance in heroin addiction: Evolution of a day program.** *American Journal of Nursing*, 1970(Dec), Vol. 70(12), 2575-2577.—Describes a methadone treatment unit which began as an inpatient program on a psychiatric research unit. Faced with a pressing demand for an expansion of the program, a shortage of staff, and a conflict between an individual vs. a group approach to rehabilitation, the staff critically evaluated the design of the program and decided to

change it. The emphasis was turned from inpatient to outpatient treatment, from individual therapy to group therapy, and from staff control to patient peer control.—*Journal abstract.*

10236. Pearson, Barbara A. (New York U.) **Methadone maintenance in heroin addiction: The program at Beth Israel Medical Center.** *American Journal of Nursing*, 1969(Dec), Vol. 70(12), 2571-2574.—Discusses the methadone maintenance program at the Morris Bernstein Institute of Beth Israel Medical Center in New York City which is 1 of the earliest methadone programs and has been used as a model in the development of many other programs. Social rehabilitation of an addict is informally integrated into all 3 phases of the program. After a patient has been gradually built up to his stabilization level of methadone in Phase I, he receives intensive counseling in social and vocational rehabilitation in Phases II and III. The nurse in this program counsels in health problems, observes for attitude and behavior changes in patients, provides emotional support, and serves as a reference for patients' interactions with nonaddicts, as well as dispensing the methadone.—*Journal abstract.*

10237. Smart, Reginald G., Schmidt, Wolfgang, & Bateman, Karen. (Addiction Research Foundation, Toronto, Ontario, Canada) **Psychoactive drugs and traffic accidents.** *Journal of Safety Research*, 1969(Jun), Vol. 1(2), 67-73.—Examined the accident rates of 30 psychoactive drug abusers seen at a psychiatric hospital in Toronto, Canada. 15 mixed addicts (alcohol and psychoactive drugs), 3 amphetamine addicts, 6 barbiturate addicts, 2 tranquilizer addicts, and 4 Ss dependent on a variety of barbiturates, tranquilizers, and amphetamines were interviewed as to their driving experiences: miles driven/yr, number of accidents, type of accident, and drug use prior to accidents. Data were cross-checked with public records. Expected accident rates were computed for age and sex and compared to the observed rates. Ss had an overall accident rate 1.9 times the expected. The highest accident rates occurred for those who abused alcohol and tranquilizers and amphetamines alone or in combination. Lower than expected rates were observed in those who abused alcohol and barbiturates; alcohol, tranquilizers, and barbiturates; barbiturates; and barbiturates and tranquilizers. The heaviest drug use prior to accidents was in the amphetamine group. Results are discussed in terms of the effects of the drugs. (24 ref.)—*S. Knapp.*

10238. Smith, David E. & Wesson, Donald R. (San Francisco Medical Center, Calif.) **Phenobarbital technique for treatment of barbiturate dependence.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 56-60.—Describes a technique for withdrawal of patients physically dependent upon barbiturates and other sedative-hypnotics, including heroin. The technique involves substituting phenobarbital, a long-acting barbiturate, for the addicting agent and subsequent withdrawal of the phenobarbital. The longer action of phenobarbital provides a more constant barbiturate blood level than the shorter-acting barbiturates which are the classical withdrawal agents. The more constant blood level allows the safe utilization of smaller daily doses of barbiturates during withdrawal. 5 case studies are reported.—*Journal abstract.*

Alcoholism

10239. ———. **Alcoholism neglected.** *British*

Medical Journal, 1970(Aug), Vol. 3(5718), 298.—Describes a medical council on alcoholism established in England to educate the public about alcoholism as a chronic disease and to create a coordinated action of physicians and general public on alcoholism. Obstacles are noted, e.g., lack of funds and unwillingness of the public to regard alcoholism as a disease. The use of money coming from liquor sales towards prevention of alcoholism is suggested.—*I. Halev.*

10240. ———. **Summer school on alcoholism.** *British Medical Journal*, 1969(Oct), Vol. 4(5675), 60-61.—Describes an experiment in which doctors, nurses, members of the prison and probation services, and a lawyer (Total N=150) met for a 1-wk residential course on alcoholism. Ss read papers on selected topics, attended a few formal lectures, and were taught in small tutorial groups. Psychological and social problems bearing on the courses of abnormal drinking were analyzed, and treatment services and their utilization considered.—*I. Halev.*

10241. Chalfant, Hugh P. (U. Notre Dame) **Illegitimate illness and the sick role: Social workers and alcoholism.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1399-1400.

10242. Holmes, Robert M. (Rocky Mountain Coll.) **Alcoholics Anonymous as group logotherapy.** *Pastoral Psychology*, 1970(Mar), Vol. 21(202), 30-36.—Compares AA with Viktor Frankl's philosophy in terms of dimensional ontology, existential frustration, freedom, and responsibility.—*O. Strunk.*

10243. Jones, Ben & Parsons, Oscar A. (U. Oklahoma, Medical Center, Oklahoma City) **Impaired abstracting ability in chronic alcoholics.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 71-75.—Compared performance on an abstracting task by matched groups of 40 hospitalized alcoholics, 40 brain-damaged patients, and 40 control patients. Alcoholics manifested a deficit on the Halstead Category test similar to that of the brain-damaged Ss. The performance deficit of the alcoholics was related positively to the number of years of drinking, independent of age. The pattern of performance differences in the present investigation and results from other investigations suggest that chronic alcoholics may have mild brain damage to the prefrontal area or related subcortical structures or both. (15 ref.)—*Journal abstract.*

10244. Keehn, J. D. (York U., Toronto, Ontario, Canada) **Neuroticism and extraversion: Chronic alcoholics' reports on effects of drinking.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 767-770.—48 chronic alcoholics in an inpatient facility completed both forms of the Eysenck Personality Inventory. All were sober at the time of testing but they were instructed to complete the inventory, 1st, as they felt while sober, and 2nd, as they felt while drinking. Neuroticism scores did not change, but extroversion scores averaged significantly higher under the drinking instruction.—*Journal abstract.*

10245. Kimmel, Mary E. **Antabuse program for alcoholics: Racine County.** *Journal of Psychiatric Nursing & Mental Health Services*, 1969(Jan), Vol. 7(1), 38-41.—Describes an antabuse program for hard core alcoholics in which 1 person, under a doctor's supervision, handles all 3 areas of interviewing, drug administration, and follow-up. Implementation begins when the patient is committed or volunteers for treatment. After recovery from the acute alcoholic episode, he is apprised of the conditions and possible reactions of the

program. The patient is then given an aversion test to determine his personal reaction to alcohol plus antabuse and to avoid unsupervised experimentation. Following recovery from the aversion test, he is released from the hospital but must report to a clinic twice weekly for his liquid dose of antabuse. Patients are strongly urged to seek counseling from AA or mental health services.—*M. West.*

10246. Kish, George B. (Roanoke Coll.) **Correlates of active-passive food preferences: Failure to confirm a relationship with alcoholism.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 839-847.—Examined a variety of correlates of the Food Preference Inventory (FPI) in 54 male alcoholics and 96 male controls to gather evidence regarding the inventory's validity as a measure of oral passivity-activity and to determine whether it is related to alcoholism. No relationship with alcoholism was found. High (more passive) FPI scores were to some degree (a) sex-related, with males scoring more passively; (b) negatively related to educational level; (c) positively related to authoritarianism; and (d) negatively related to the Social Presence scale of the CPI and positively related to the Socialization, Self-Control, Good Impression, and Achievement via Conformance scales of the CPI. Findings support the construct validity of the FPI but do not support previous findings of a relationship with alcoholism.—*Journal abstract.*

10247. Pancheri, Paolo & Lalli, Nicola. (U. Rome, Inst. of Psychiatry, Italy) **Contributo allo studio della persona personalita' dell'alcoolista cronico attraverso il MMPI.** [Contribution to the personality study of the chronic alcoholic using the MMPI Test.] *Rivista di Psichiatria*, 1969(Jan), Vol. 4(1), 1-13.—Studied a group of 30 alcoholics all of whom (a) were male sex, (b) were 30-50 yr. old, (c) had a clinical diagnosis of chronic alcoholism, (d) had no evidence of psychosis or of organic deterioration, (e) had no more than a 5th grade education, and (f) had a low social and cultural level. The method chosen was the MMPI because of its easy administration, and only a small margin of error possible in interpreting it. It is concluded that the personality of the chronic alcoholic is of a neurotic rather than a psychopathic nature. The predominant characteristics of the chronic alcoholic are hypochondria, depression, and hysterical behavior. (English summary) (18 ref.).—*A. M. Farfaglia.*

10248. Resnick, Harvey & Adamson, John D. (U. Manitoba, Winnipeg, Canada) **Star-tracing test during alcohol withdrawal: Preliminary report of a method.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 819-823.—Describes the use of the simple laboratory star-tracing test in assessing the course of the alcohol withdrawal syndrome in an experiment with 20 26-62 yr. old alcoholic patients. Test scores (number of line irregularities) correlated best with clinical estimates of tremulousness (Spearman $\rho = .61$) and also correlated with the overall course of the syndrome as measured by total scores computed from a nurses' clinical rating form. Apart from the basic physiological disturbance, it appears that the other main influence on test scores is variation in emotional disturbance. It is concluded that such a performance measure should be a useful objective adjunct in evaluation of treatment of the alcohol withdrawal syndrome.—*Journal abstract.*

10249. Rule, Brendan G. & Besier, Dorothy P. (U. Alberta, Edmonton, Canada) **Level of risk advocated by alcoholics.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 829-830.—12 male alcoholism counselors and 12

male chronic alcoholics responded to a 5-item questionnaire consisting of 3 items chosen from the Wallach and Kogan Choice Dilemmas questionnaire and 2 items constructed to represent dilemmas concerning alcohol. Ss indicate the lowest probability of success they would accept to take the risky alternative, which was clearly the more desirable choice. Results of a 2×5 analysis of variance indicate that alcoholics were more conservative in the probabilities they would accept to take the risky alternative than were the counselors. The items also differed significantly from each other.—*Journal abstract.*

10250. Schuckit, M., Rimmer, J., Reich, T., & Winokur, G. (U. Edinburgh, Scotland) **Alcoholism: Antisocial traits in male alcoholics.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 575-576.—Histories of 125 alcoholics show more antisocial behavior in early onset cases. These early alcoholics cannot be considered sociopaths since they had limited spheres of antisocial behavior. The assumption that early alcoholism means an antisocial personality would lead to assigning a poor prognosis to some cases where it is not warranted.—*R. L. Sulzer.*

10251. Tarter, Ralph E. & Parsons, Oscar A. (U. Oklahoma, Medical Center, Oklahoma City) **Conceptual shifting in chronic alcoholics.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 71-75.—Examined the inferior performance of chronic alcoholics on abstracting tasks. After administering the Wisconsin Card Sorting Test to 24 alcoholics, it was found that alcoholics took more trials to reach criterion and made more errors than either a group of 24 hospital controls or 24 students. Error pattern analysis indicates that these differences could not be attributed to perseveration. The deficit appeared to be in sustaining a pattern of search and persistence in problem solution. Duration of drinking history was related to impairment of task persistence. Results are consistent with the hypothesis of subcortical organic involvement with a concomitant deficit in conceptual shifting tasks.—*Journal abstract.*

10252. Wanberg, Kenneth W. (Ft. Logan Mental Health Center, Denver, Colo.) **A pilot follow-up study of alcoholism patients.** *Journal of the Fort Logan Mental Health Center*, 1968(Fal), Vol. 5(2), 101-106.—Describes a follow-up study of a sample of 1000 patients of an alcoholic treatment program. Every 10th patient of the 1000 was selected. 41 could not be located, 5 had died, 27 did not consent, and 27 did consent to be interviewed. 33% of this study sample, compared to 5-20% in other studies, maintained sobriety for 1 yr. or more. There appeared to be a positive relationship between improvement following treatment and the extent to which help had been sought prior to treatment, being employed, living alone or with spouse only (vs. spouse and children), and participation in AA. A positive relationship also was indicated between length of sobriety and improvement of interpersonal associations. Basic socioeconomic structures did not seem to change. The apparent mobility of the 41% who could not be traced suggests that alcoholics may be markedly alienated persons.—*Journal summary.*

10253. Wiseman, Jacqueline P. (San Francisco State Coll.) **Stations of the lost: The treatment of skid row alcoholics.** Englewood Cliffs, N.J.: Prentice-Hall, 1970. xxi, 346 p. \$8.95(cloth), \$4.95(paper).

Suicide

10254. ———. **Medical contributions to suicide.**

British Medical Journal, 1969(Sep), Vol. 3(5671), 610.
— Reports that the suicide rate among patients in mental hospitals in Great Britain has been found to be 4-5 times as high as among the general population. Psychiatric patients as a group are known to be suicide prone. It has been queried whether doctors make an iatrogenic contribution to the suicide record. A study was made on 35 psychiatric patients admitted to an inpatient unit after a suicide attempt. It was found that the doctor (a) often discriminates against patients whose behavior does not fit with the image of a model patient; and (b) the doctor antagonized by the patient feels rejected himself, which may be partly responsible for the excessive rate of suicides among psychiatrists. It is suggested that "many doctors tend to underrate and deny the risk of suicide in their patients." Often attempts at suicide are dismissed as gestures desiring to draw attention to themselves.—*J. Hales*

10255. —. **Suicide prevention.** *British Medical Journal*, 1969(Nov), Vol. 4(5682), 513-514.—Discusses the growth of interdisciplinary suicide prevention organizations, many of them community based, as a world wide movement. The International Association for Suicide Prevention, established in 1965, serves as a forum for the interchange and advancement of knowledge of suicidal behavior. Data from a recent conference indicate that Britain is the only large country where 1 type of organization, the Samaritans, are firmly established. In the United States, training fellowships in suicidology are available to medical and behavioral science graduates at various medical schools. The movement is gaining momentum almost everywhere, and "illustrates a healthy trend of the community in mobilizing its potential therapeutic resources."—*J. Hales*

10256. **Bertiner, Beverly S.** (San Bernardino Valley Coll.) **Nursing a patient in crisis.** *American Journal of Nursing*, 1970(Oct), Vol. 70(10), 2154-2157.—Presents an example of how 1 patient in a crisis situation was helped through delivery and postpartum. The patient was slightly to moderately suicidal and was undergoing both a situational crisis superimposed upon a maturational crisis. "The aim of crisis therapy is to intervene before the anxiety level reaches panic."—*B. A. Burkard*

10257. **Guze, Samuel B. & Robins, Eli.** (Washington U. Medical School) **Suicide and primary affective disorders.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(529), 437-438.—Data from 17 studies of suicide are tabulated and document the greatly increased risk of suicide in patients with primary affective disorders. The ultimate risk appears to be in the range of 15%.—*R. L. Silver*

10258. **Hedley-White, John & Blanchard, John B.** **Barbiturate intoxication with progressive respiratory insufficiency.** *New England Journal of Medicine*, 1970(May), Vol. 282(19), 1087-1096.—States that non-barbiturate hypnotics are currently the favored method of performing the suicidal act, while hostility appears to be the chief motivating factor. The case of a 22-yr-old female admitted to a hospital in a comatose state is reviewed. Modes and methods involved in making the diagnosis of barbiturate intoxication and initiating the appropriate treatment are discussed. Complications in this patient included aspiration pneumonia (secondary to self-induced coma caused by long-acting barbiturates), oxygen toxicity, and terminal staphylococcal septicemia. (31 ref.)—*B. A. Stanton*

10259. **Kangas, Pamela & Mahrer, Alvin R.** (Miami U., O.) **Suicide attempts and threats as goal-directed communications in psychotic males.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 795-801.—Compared 15 suicide attempters and 33 threateners with each other and with 276 control male psychiatric patients on a Psychological Problem Inventory. Results indicate that suicide attempters were characterized by patterns of self-rejection and aggressive tendencies. Threateners were characterized by suicidal sexual anxiety, self-directed aggression, and a trend toward inadequacy. Implications were relative to the motivational goals of attempters and threateners. (20 ref.)—*Journal abstract.*

10260. **Lester, David.** (Suicide Prevention & Crisis Service, Buffalo, N.Y.) **Completed suicide and latitudo.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 818.—Reviews a 1967 correlational study over the continental United States. Results show that the suicide rate was significantly higher in the northern than in the southern states.—*Author abstract.*

10261. **Lester, David.** (Suicide Prevention & Crisis Service, Buffalo, N.Y.) **Relation between attempted suicide and completed suicide.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 719-722.—Discusses the view that attempted and completed suicides are 2 different, but overlapping populations. It is concluded that suicidal behaviors fall on a continuum of seriousness and that extrapolations can be made on the basis of this continuum.—*Journal abstract.*

10262. **Lester, David.** (Suicide Prevention & Crisis Service, Buffalo, N.Y.) **Suicidal behavior and external constraints.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 777-778.—Discusses the hypothesis that suicide is common where external frustrations and restraints are minimal. The hypothesis was used to account for several phenomena, e.g., the high suicide rate on the West Coast, the high rate in spring, and the low rate during war, and to predict other cases where suicidal behavior might be more common, e.g., after restoration of sight to those blind from birth.—*Journal abstract.*

10263. **Motto, Jerome A.** (U. California, Medical School, San Francisco) **Toward suicide prevention in medical practice.** *JAMA. Journal of the American Medical Association*, 1969(Nov), Vol. 210(7), 1229-1232.—Current developments in health care place the nonpsychiatric physician in a pivotal position regarding the identification and management of depressed and suicidal persons. It is essential that the physician resolve his own anxiety about suicide in order to function most efficiently in this role. Only when this is achieved will principles of management and treatment have value. An active case-finding approach, comparable to the routine chest x-ray film, serology, etc. is needed to effectively modify these suicidal states before they develop to crisis proportions. To further this goal, it is suggested that inquiry about depressive and suicidal states be made an essential part of every routine medical examination.—*Journal abstract.*

10264. **Pretzel, Paul W.** (Suicide Prevention Center, Clinical Services, Los Angeles, Calif.) **The role of the clergyman in suicide prevention.** *Pastoral Psychology*, 1970(Apr), Vol. 21(203), 47-52.—The suicidal person frequently attempts to communicate his tensions in a variety of ways. The clergyman who can interpret these communications can often be of important help in averting a tragedy. The clergyman can also offer continuing care once the immediate crisis is past, and he

is in an ideal position to minister to those left behind.

—O. Strunk.

10265. Ross, Mathew. (Massachusetts General Hosp., Boston) **Death at an early age.** *Canada's Mental Health*, 1970(Nov), Vol. 18(6), 7-10.—Discusses suicide among the adolescent age group and reviews findings based on 7431 suicides and attempted suicides in 10 countries. Data indicate that, in general, (a) suicide rates tend to increase directly with age and development; (b) the child's concept of death develops from early ideas that death is reversible to a later more idealistic concept; (c) suicides usually come from backgrounds of social isolation—most often a disorganized or broken home; and (d) running through the lives of suicide-prone children is the loss of love or the feeling of being unloved or unlovable. Because adolescents may react impulsively, any expression of suicidal intention must be taken seriously. Usually, within 3 mo. preceding a suicidal act, there are behavioral changes, especially depressive ones. Children attempt suicide from anger, attempts to manipulate, a cry for help, inner disintegration, or a desire to join a loved one. Psychiatric treatment must be individualized, and it is stressed that the 3-mo period following the beginning of improvement from psychotherapy is the time when most subsequent suicidal acts occur.—M. West.

10266. Rudestam, Kjell E. (Miami U.) **Stockholm and Los Angeles: A cross-cultural study of the communication of suicidal intent.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 82-90.—Studied the communication of suicidal intent in 50 consecutive cases of confirmed suicide selected from coroner's records in both Stockholm, Sweden, and Los Angeles, California. Using the "psychological autopsy" method, intensive interviews were conducted with a close friend or relative of the decedent approximately 2 mo. after the suicide. Results indicate that at least 60% of the victims in both cities had made direct verbal threats prior to taking their lives, while more than 80% had voiced direct or indirect threats. Responses to the suicidal communications were generally maladaptive. Cross-cultural differences in the data, and the need for better understanding of suicide dynamics among laymen are discussed. (20 ref.)—*Journal abstract.*

10267. Rudestam, Kjell E. (U. Oregon) **Stockholm and Los Angeles: A cross-cultural study of the communication of suicidal intent.** *Dissertation Abstracts International*, 1971(Feb), Vol. 30(8-B), 3875.

Crime

10269. Albert, Lawrence H. (Boston U., School of Education) **An exploratory study of sex-role identification and developmental level as they relate to particular crimes.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1003-1004.

10270. Cressey, Donald R. (U. California, Santa Barbara) **Organized crime and inner-city youth.** *Crime & Delinquency*, 1970(Apr), Vol. 16(2), 129-138.—Criminal influences abounding in the ghettos can be offset by discovering and expanding those anticriminal behavior

patterns that keep some of the youth in organized crime areas out of trouble.—M. P. Edwards.

10271. Koller, K. M. & Castanos, J. N. (St. George Hosp., Sydney, New South Wales, Australia) **Family background in prison groups: A comparative study of parental deprivation.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 371-380.—Parental loss and subsequent institutional rearing were found to be common with a sample of long-term prisoners. Among normal controls parental loss was largely a passive process with later rearing by the remaining parent. Birth order and ordinal position showed no differences, but the "family size of the offender group was large, and an excess of male children in the families was noted." (24 ref.)—R. L. Sulzer.

10272. Lipsett, Paul D. (Harvard Medical School, Lab. of Community Psychiatry, Boston, Mass.) **The dilemma of competency for trial and mental illness.** *New England Journal of Medicine*, 1970(Apr), Vol. 282(14), 797-798.—A recent decision of the Supreme Judicial Court of Massachusetts in the case of Commonwealth vs. Drunken could lead to radical changes in the pretrial commitment procedures to mental hospitals of persons accused of crimes. The high court held that a person who has been committed to a mental institution for trial must receive the same safeguards against his loss of freedom that he would receive if he were involuntarily hospitalized as a mentally ill person. Much confusion has been created by the intermingling of the issues of competency, mental illness, and insanity. Although the only legal rationale for a criminal commitment before trial is on the basis of competency to stand trial, cases are frequently disposed of through indefinite commitment on the bases of mental illness. The legal safeguards are therefore important but should not cloud the issue that the immediate purpose of hospitalization is to attain a level of mental competency to allow the accused to stand trial.—S. R. Diamond.

10273. Mask, Warren S. (Florida State U.) **The effects of short-term tasks and financial incentive on the educational achievement of young prison inmates.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 999-1000.

10274. Nielsen, Johannes. (Århus State Hosp., Cytogenetic Lab., Risskov, Denmark) **Criminality among patients with Klinefelter's syndrome and the XYY syndrome.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 365-369.—The majority of 61 patients with Klinefelter's syndrome and nearly all 12 with XYY sex-chromosome constitution showed a record of criminality. "There was a comparatively high frequency of sexual criminality and arson in both patient groups." The pathogenesis is so far unknown.—R. L. Sulzer.

10275. Reinhardt, James M. (U. Nebraska) **Prison education as an aid to therapy.** *International Journal of Offender Therapy*, 1968, Vol. 12(3), 113-118.—Considers a prisoner to be an unnatural man living in an unnatural place, committed against the social order which is committed against him. It is asserted that illiteracy and poor vocational capacity are handicaps in life, but training alone does not make men law-abiding. A sense of individual worth is a prime requisite for a successful education. Prisoners who have lost their self-esteem can be reformed only by a profoundly moving reconditioning which must be kept separate from the concept of "paying their debt to society."—*Journal abstract.*

10276. Sandhu, Harjit S. (U. Guelph, Ontario,

Canada) **Therapy with violent psychopaths in an Indian prison community.** *International Journal of Offender Therapy*, 1970, Vol. 14(3), 138-144.—Describes a therapeutic milieu treatment of small groups of violent offenders who had caused serious trouble in their prisons. Ss were transferred for 6-12 mo. to a small experimental institution run by some permanent staff and the trainees of a prison staff college and inhabited by well-behaved prisoners. Techniques are described which succeeded in resocializing 13 out of 18 psychopaths. (French, German, & Spanish summaries)—*Journal summary*.

10278. Toland, John I. (U. Maryland) **Inmate behavior: Interaction, sentiment, and activity in a therapeutic community for abnormal offenders.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1392-1393.

10279. Washbrook, R. A. (H. M. Prison, Birmingham, England) **The homeless offender: An English study of 200 cases.** *International Journal of Offender Therapy*, 1970, Vol. 14(3), 176-184.—Examined the criminal histories, clinical assessments, and social inquiry reports of 200 male homeless prisoners. Analysis of data revealed the presence of 2 subgroups: Group 1, 16-30 yr. of age with an average IQ of 101; and Group 2, 34-70+ yr. of age with an average IQ of 68. In Group 1 generalizations were found for Ss from different geographical areas. Ss from the English Midlands had a long history of delinquency, poor personal and employment records, and were diagnosed as having severe character disorders. Ss from Ireland were 1st offenders, felt culturally isolated, and were not mentally ill. Ss from England and Wales, Scotland, the West Indies, and Central Europe were similarly classified. In Group 2 geographical generalizations could only be found for the 5 Ss from Central Europe and the 4 Ss from Jamaica where paranoid features and petty criminal activity were noted. Group 2 was generally classified as composed of trivial offenders with a prevalence of mental illness. It is concluded that the lack of a home and family may be a severe pathogenic factor. It is suggested that rehabilitation procedures be directed to prevent recidivism in this group. (French, German, & Spanish summaries)—*S. Knapp*.

10280. Weiant, Elizabeth A. (Boston U., School of Education) **An experiment in voluntary group-centered counseling: Dedham House of Correction.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2120-2121.

10281. Wille, Warren S. **Citizens who commit homicides.** *Revista Interamericana de Psicología*, 1970(Jun), Vol. 4(2), 131-144.—Presents a psychiatric study of 100 persons who have committed the crime of homicide. Ss included in this study were examined during the time they were serving sentences in prison. Every offender was evaluated for 18 different factors with an effort being made to examine particularly the state of mind of the offender at the time of the act; what immediate determinants contributed to the act; an evaluation of the superego of the assailant; what relationship existed with the victim; a determination of whether alcohol contributed to the act; and whether violent child rearing was a factor in the early life environment of the eventual offender. The usual demographic data were included as to the S's age, educational background, occupational background, etc. Data indi-

cate that over 50% of homicides are committed by persons without any previous police or penal record, often on relatives or friends, and most often in the home. (Spanish & Portuguese summaries)—*Journal abstract*.

Juvenile Delinquency

10282. ———. **When a child is wrongly treated.** *International Journal of Offender Therapy*, 1970, Vol. 14(3), 185-202.—Presents 3 papers on mistreated youth.

(a) A 16-yr-old delinquent boy describes his life in various institutions after the death of his foster mother when he was 6. The therapist discusses his treatment and the results of therapy. (b) A teacher reports that schools are divided by a wall between the successes and the failures. Early failures are seen as creating a self-image which perpetuates a career of failure. It is concluded that teaching should precede discipline, that teachers should encourage children and set them tasks in which they may experience success. (c) A school principal describes efforts made over a period of years to socialize an aggressive boy who was the youngest of 3 antisocial brothers, the scapegoat of the neighborhood, and the product of a poor and inadequate family. (French, German, & Spanish summaries)—*S. Knapp*.

10283. Bailey, Jon S., Wolf, Montrose M., & Phillips, Elery L. (Florida State U.) **Home-based reinforcement and the modification of pre-delinquents' classroom behavior.** *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 223-233.—Developed and evaluated a system for the remote reinforcement of classroom behavior using reinforcers delivered at home. In Exp. I, 5 11-15 yr. old boys from a home for pre-delinquents attended a special summer school math class where study behavior and rule violations were measured daily for each S. Ss were required to take a report card for the teacher to mark. The teacher marked yes or no to whether an S had studied the whole period and obeyed the class rules. All yeses earned privileges in the home that day but a no lost all the privileges. Using a reversal design, it was shown that privileges dispensed remotely could significantly improve classroom performance. In Exp. II and III, home-based reinforcement was also shown to be effective in improving the study behavior of 2 Ss in public school classrooms. Data from Exp. III suggest that the daily feedback and reinforcement may be faded without much loss in study behavior. Home-based reinforcement is demonstrated to be a very effective and practical classroom behavior modification technique. (16 ref.)—*Journal abstract*.

10284. Barden, Donna M. (U. Minnesota) **A comparison of the histories of delinquent boys and girls.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3860-3861.

10285. Bhagat, M. & Fraser, W. I. (Victoria Hosp., Kirkcaldy, Scotland) **Young offenders' images of self and surroundings: A semantic enquiry.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 381-387.—20 young Glasgow offenders from slums were compared to matched offenders from a new housing area. Attitudes revealed by the semantic differential showed both groups to have identical perceptions of the concepts relevant to delinquency. 20 matched nonoffenders were less negative generally, particularly to concepts of self, love-affection, and environs.—*R. L. Sulzer*.

10286. David, Henry P. (American Inst. for Research, International Research Inst., Silver Spring, Md.) **Mental, health and social action programs for children and**

youth in international perspective. *Mental Hygiene*, 1970(Oct), Vol. 54(4), 503-509.—A 1968 survey of 40 countries shows differences in (a) definition and incidence of delinquency, (b) attitudes toward substitutes for parental care, (c) ideological bases for remedial efforts, and (d) proportions of national budget allocated to child welfare. Conclusions suggest (a) better applications and adaptations of available knowledge, (b) recognition that basic barriers to improvement of child care are socio-economic, and (c) recognition that no 1 country, profession, or ideology has a monopoly on innovative programs.—A. M. Cawley.

10287. Deming, Romine R. (Iowa State U.) **A study of the association between the attraction to the probation officer-client relationship and various psycho-social attitudes of juvenile probationers.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1912.

10288. Garner, Gwen F. (U. Oklahoma) **Patterns of communication in a training school for adolescent girls.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3866.

10289. Holliman, Clifford L. (U. South Carolina) **A differential analysis of the comparative effectiveness of group counseling and individual counseling processes in producing behavior changes of juvenile delinquents using direct behavioral referents as measures of change.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1511.

10290. Horton, Lois E. (5 Boron Lane, Burlington, Mass.) **Generalization of aggressive behavior in adolescent delinquent boys.** *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 205-211.—Investigates the generalization of conditioned aggressive and non-aggressive responses in a group of 3 aggressive and 3 nonaggressive adolescent delinquent boys. Responses were reinforced in card games where a token reinforcement system with money as a back-up reinforcer was used. Conditioning of responses was rapid. Generalization, measured in terms of frequency of physical contact, was tested in a group game for which no reinforcement was given. Generalization occurred during aggressive contingencies. During nonaggressive contingencies, responses did not return completely to the base-line level.—*Journal abstract*.

10291. Kissling, Eugene J. (St. Louis U.) **A comparison of delinquent typologies and their relationship to age and race.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3870.

10292. Schlichter, K. Jeffrey & Ratliff, Richard G. (Pennsylvania State U.) **Discrimination learning in juvenile delinquents.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 46-48.—Tested 45 delinquent and 45 nondelinquent males in a 2-choice discrimination task with either reward for correct responses, punishment for incorrect responses, or reward and punishment for correct and incorrect responses, respectively. A modified Wisconsin General Test Apparatus was used. Results indicate a significant Group \times Reward interaction in which nondelinquent Ss learned best for punishment and delinquent Ss learned best for reward. Results are interpreted as reflecting possible group differences in reward expectancies.—*Journal abstract*.

orders. *British Medical Journal*, 1969(Nov), Vol. 4(5678), 250-251.—Describes the use of hypothalamotomy, "the stereotaxic ablation of the ventromedial hypothalamic nucleus or 'sex-behaviour centre,'" with 3 male patients who had committed repeated homosexual offenses with pubertal boys. A distinct reduction of sexual drive was noted after surgery, "with the complete abolition of homosexual tendencies in 2 of the patients and sufficient reduction in the 3rd to enable them to be controlled." Follow-up studies at 3 and 6 mo., and 7 yr. indicate improvement in social and emotional adjustment, and an absence of further sexual offenses. Although hypothalamotomy is a drastic procedure, it is felt to be of importance considering other existing alternatives.—*J. Halev*.

10294. Burian, R. (U. Berlin, Neurology Clinic, E. Germany) **Über eine durch sexuelle Prägung entstandene Form der Pädophilie.** [A form of pedophilia resulting from sexual trait.] *Psychiatrie, Neurologie und medizinische Psychologie*, 1970(Jul), Vol. 22(7), 249-253.—A form of pedophilia which can be interpreted as a genuine sexual perversion is presented through 3 illustrative case histories. The partner relationships reported are fetishistic and bisexual. (24 ref.)—K. J. Hartman.

10295. Dello Russo, Giovanni & Tamburro, Giuseppe. **III Convegno sul tema: "L'impotenza sessuale": Omosessualità e impotenza.** [3rd annual convention on the subject: "Sexual impotence": Homosexuality and impotence.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 307-312.—Pointed out that there is a more optimistic view concerning homosexuality. It is difficult to bring a homosexual to therapy. Ss are usually forced to seek therapy by relatives, in which case the proper motivation is lacking. The homosexual wants to overcome his deviation of the social norm by heterosexual relationships. Freud, in 1935, spoke pessimistically of this possibility; he thought that all depended on the age of the S and on awakening latent heterosexual capability. This is no longer true. Every case of homosexuality is the expression of a resistance against the execution of the act. Impotence results from an active inhibition which must be removed. From a therapeutic viewpoint, the obscure process, which interrupts a behavioral sequence during its harmonious development, must be overcome. 2 cases illustrate the complex nature of psychoanalysis with the homosexual: (a) a 28-yr-old S, who justifies his homosexuality because of his impotence with females, is willing to be psychoanalyzed; he is, in reality, unwilling to be cured and uses the therapy as a defense mechanism; and (b) a 32-yr-old S with psychogenic impotence is willing to be helped, but the nature and power of his inhibitions, which are the basis of the problem do not allow it.—A. M. Farfaglia.

10296. Major, René. **Le logographe obsessionnel.** [The obsessional logograph.] *Interprétation*, 1968(Jan), Vol. 2(1), 5-13.—Interprets a word puzzle unconsciously designed by a sexually inhibited male scopophilic whose repeated interjection during analysis of "Ah! l'inceste!" together with his statement that his compulsive peeping at women's legs produced an intoxication comparable with that of "marijuana," aroused the analyst's curiosity as to hidden meaning. Decoding revealed that "Ah! l'inceste!" signified "Alain, cesse!" (Alain, stop!), which referred to maternal forbiddance during an Oedipal situation in early childhood. In the patient's complex defensive system "marijuana" signified "marie-jeanne" (husband-Jeanne), his childhood name for his penis,

Homosexuality & Sexual Deviation

10293. ———. **Brain surgery for sexual dis-**

MENTAL DISORDER

which referred to a disguised sexual desire for an aunt (mother substitute). His sexual inhibition (inability to possess) reflected the possessive article in the phrase "être le mari de Jeanne" (to be Jeanne's husband), with "Jeanne" referring both to his father's sister-in-law (mother substitute and object of desire) and, incidentally, to the similarly named wife of the analyst.—*T. N. Webster.*

10297. Schiffer, Danella. (City Coll., City U. New York) **Relation of inhibition of curiosity to homosexuality.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 771-776.—To ascertain whether inhibition of curiosity is related to overt homosexuality, a 13-item questionnaire designed to measure level of general curiosity was given to 10 male and 10 female homosexuals, and 10 male and 10 female heterosexuals. The female homosexuals demonstrated a significantly lower measured curiosity score than any of the other 3 groups, but the male homosexuals did not differ from the heterosexuals.—*Journal abstract.*

10298. Stewart, Sidney. **Quelques aspects théoriques du fétichisme.** [Some theoretical aspects of fetishism.] *Interprétation*, 1968(Apr), Vol. 2(2), 83-103.—Discusses contradictory theories in the literature, noting that fetishism has practically never been studied from the structural angle. Analysis of a personal case (a male patient whose fetish was an enema bag filled with very hot water, who sought treatment not for the purpose of ridding himself of his fetish, but because of associated sado-masochistic fantasies which he feared transforming into action) illustrates 4 points. (a) Fetishism has the same sado-masochistic structure as that described by Freud in "A child is being beaten." (b) Fetishism represents only part of the splitting process—each element of the fantasy and ritual is devised in such a way that each has 2 totally opposed meanings, simultaneously representing and denying the representation. (c) In the fantasy, the object is also divided in an attempt to preserve the erotic attachment. (d) In regressing to the sadic-anal phase, the fetishist accomplishes in a particular manner a "splitting" of the identification process, thus endeavoring to avoid castration anxiety while retaining his mother as sexual object, and, at the same time, negating this attachment by making his father a homosexual object. To appease the superego, the homosexual object is disguised as female, but the fetishist denies that this is a representation of his mother. (50 ref.)—*T. N. Webster.*

10299. Weitzman, Elliott L., Shamoian, Charles A., & Golosow, Nikolas. (Payne Whitney Psychiatric Clinic, New York, N.Y.) **Identity diffusion and the transsexual resolution.** *Journal of Nervous & Mental Disease*, 1970(Nov), Vol. 151(5), 295-302.—Presents data from a 4-mo hospitalization and 18-mo follow-up of an adult male transsexual. The S was an effeminized boy, perpetuating early forms of identification with his mother and unable to effect normal identification with his father. The tenuous and fragile development of the S's gender identity through homosexual, transvestic, and heterosexual phases is outlined. His increasing feminine sense of self with its ultimate fragmentation to primitive forms of both "as if" role playing and "fusions of self and object," which led to the transsexual resolution and operation is discussed. The role of aggression in the transsexual resolution is considered and serious post-operative complications are noted.—*Journal abstract.*

10300. ———. **Insanity and diminished responsibility.** *Australian Occupational Therapy Journal*, 1968(Oct), Vol. 15(4), 36.—States the definitions of insanity and diminished responsibility incorporated in the laws of Queensland, Australia.

10301. Alkire, Armand A., Goldstein, Michael J., Rodnick, Eliot H., & Judd, Lewis L. (Veterans Administration Hosp., Sepulveda, Calif.) **Social influence and counterinfluence within families of four types of disturbed adolescents.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 32-41.—Investigated factors in the intrafamilial environment which may explain variations in the forms of adolescent psychopathology. Social influence messages were elicited from 24 disturbed boys and 8 disturbed girls, median age 16 yr., and their parents. These messages were used subsequently in a simulated interaction task. Application of a social influence coding system to the influence statements, expectations of others' responses, and actual responses and shifts in responses following awareness of expectations differentiated families of 4 types of disturbed adolescents. 2 parameters of parental behavior were significant in differentiating among the adolescent problem groups: (a) the overtness or assertiveness used in exerting parental social influence, and (b) the focus of power in 1 or the other parent. The interaction of these variables is discussed in relation to the types of disturbance shown in the adolescents.—*Journal abstract.*

10302. Birchnell, John. (Graylingwell Hosp., Chichester, England) **Sibship size and mental illness.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 303-308.—Sibling order has been studied to the neglect of sibship size. Data from interviews with 6795 psychiatric patients, over 20 yr. old, and postal questionnaires from 3425 citizens showed no relationship between mental illness and family size. Neither did diagnostic distribution within each family size differ from the expected. However, in both psychiatric and control samples, a significant relationship was found between year of birth and family size, and "in the psychiatric sample an equally marked and significant relationship was demonstrated between social class of parent and family size." (16 ref.)—*R. L. Sulzer.*

10303. Borgna, Eugenio & Smirne, Salvatore. (U. Milano, Italy) **La depressione endogena cronica.** [Chronic endogenous depression.] *Rivista di Psichiatria*, 1969(Nov), Vol. 4(6), 463-478.—Studied endogenous depressive types which do not progress in stages but are chronic. 10 Ss under 55 yr. old with unipolar, monophasic depressions were studied. Some depressions were vital as discussed by K. Schneider, and others were primary depressions as discussed by H. Weitbricht. Abnormal progression is not enough to disregard the endogenous nature. Psychiatric diagnosis is based on the description of the condition and not on its progress. It is concluded that the clinical phenomenology of chronic depression is not very different from depressions which manifest phases. Situations at the beginning of the endogenous depression are of great importance. (English summary) (45 ref.)—*A. M. Farfaglia.*

10304. Braley, Loy S. & Freed, Norman H. (San Jose State Coll.) **Modes of temporal orientation and psychopathology.** *Journal of Consulting & Clinical*

Psychology, 1971(Feb), Vol. 36(1), 33-39.—Investigated modes of temporal orientation in 18 psychiatric outpatients and a nonpsychiatric comparison population. A Q-sort technique was employed to assess actual temporal orientation and ideal temporal orientation. Ss' ability to project themselves into the future was obtained from story completions and a future-events test. Ss' ratings of their self-satisfaction were related to psychiatric status and temporal orientation. Outpatients expressed greater dissatisfaction with their actual temporal orientation, desiring it to be more future oriented. The measured ideal temporal orientations were the same for both groups. Temporal extension was also significantly more abbreviated for outpatients. Results indicate that comparison Ss endorse statements reflecting a significantly greater future actual temporal orientation than do outpatients. Greatest satisfaction with self seems to be associated with a moderate future temporal orientation. (24 ref.)—*Journal abstract*.

10305. Brauer, Rima; Harrow, Martin, & Tucker, Gary J. (Yale U., Medical School) **Depersonalization phenomena in psychiatric patients.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 509-515.—Reviews the various theories and clinical findings concerning the phenomena of depersonalization, also referred to as derealization, and déjà vu. Regarding these phenomena an attempt was made to determine the: (a) differences in frequency and severity in various diagnostic groups; (b) symptomatology; (c) implications for prognosis, hospital course, and management; (d) effects of various medications; and (e) "relation between depersonalization and other similar phenomena, e.g., derealization and déjà vu." 2 samples of 212 psychiatric patients served as Ss. A self-administered 49-item questionnaire was devised to determine the frequency the S had a given experience. Other personality inventories, attitude scales, and symptom questionnaires were administered, including the MPI, MA scale, etc. Data concerning age, sex, marital status, and previous use of LSD were also gathered. Questions from the depersonalization questionnaire were categorized into perceptual experiences and psychomotor functions and statistically analyzed. Depersonalization was found most frequently with younger Ss who were often anxious, preoccupied with internal processes, and had a tendency toward cyclothymia and depression. Ss who had used hallucinogens described the depersonalization experience as different from the effects of drugs. Data also indicate a high percentage of schizophrenics who experienced depersonalization. It is concluded that these phenomena are probably present throughout most of life but are seen in intensified form during periods of emotional stress. (33 ref.)—*J. Canady*.

10306. Caplan, Joseph. (North York Branson Hosp., Willowdale, Ontario, Canada) **Four generations of mental illness.** *Canadian Medical Association Journal*, 1969(Oct), Vol. 101(7), 418-420.—Presents the history of a family with an exceptionally large number of cases of manic-depressive illness among its members.

10307. Castellani, Antonio. (U. Sassari, Criminal Anthropology Div., Italy) **In tema di ereditarietà delle malattie mentali.** [The subject of heredity in mental illnesses.] *Rivista di Psichiatria*, 1969(Jan), Vol. 4(1), 39-52.—Studied heredity in mental illnesses from the writings of the mid-19th century (Marc, Morel, Magnan, etc.) to present day psychiatrists. Detailed facts are given under each division of mental illness: (a) psychosis due

to idiopathic encephalitis (infantile insanity, amaurotic idiocy), (b) epilepsy, (c) neurosis and abnormal personality, and (d) endogenous psychosis. In each group statistical results are given as well as the most probable mechanism in the genetic transmission. A comparative and critical analysis on the problem is conducted putting more emphasis on exogenous factors and not presenting the problem in a purely deterministic way; e.g., even in the case of epilepsy, it cannot be considered a hereditary illness in the strict sense: "One does not inherit epilepsy, but only a generic tendency to convulse in front of the proper exogenous and endogenous stimuli." (English summary) (30 ref.)—*A. M. Farfaglia*.

10308. Dixon, Barbara K. (U. Washington, School of Nursing, Tacoma) **Intervening when the patient is delusional.** *Journal of Psychiatric Nursing & Mental Health Services*, 1969(Jan), Vol. 7(1), 25-34.—Describes an intervention method in use in 2 state hospitals which has been successful with both delusional and hallucinating patients. "Nursing intervention should be based on the dynamics of human behavior," and the patient's symptoms treated as symbolic language, whether they are "a delusion, a compulsive ritual, or aggressive acting out behavior." The art of psychiatric nursing depends on "the nurse's ability to identify the patients symbolically expressed needs and then to meet those needs as creatively and constructively as possible."—*M. West*.

10309. Dos Santos, Oswaldo. **Pintura de doentes mentais.** [Painting by mental patients.] *O Hospital*, 1969(May), Vol. 75(5), 1847-1857.—Proposes that the term "psychopathological art" is not acceptable, since it is believed that the creative act is not essentially modified by mental illness. All productions, verbal or nonverbal, constitute a complex phenomenology which reveal in the patient the healthy components which are fighting the illness. The therapeutic importance of communicating unconscious thought content through plastic expression is emphasized.—*H. Singer*.

10310. Duyckaerts, F. (U. Liège, Belgium) **De quelques mécanismes psychiques de la fugue chez Jean-Jacques Rousseau.** [Psychodynamics of fugues according to Jean-Jacques Rousseau.] *Acta Psychiatrica Belgica*, 1970(Jan), Vol. 70(1), 78-102.—Using Rousseau as a good example of fugues, it is established that traveling can be considered as a specific type of fugue. Rousseau used this method to escape from people whom he considered too obsessed with their preoccupations. In young adolescents fugues are attributed to basic biological mechanisms related to drive and ambition. People deprived from contact with their mothers shortly after their births are most likely to succumb to the traveling fugue in search of pleasure. Fugues reach abnormal stages only when an individual is unable to overcome life's deprivations or fails to fit into the social standards.—*I. Sirotn*.

10311. Farina, Amerigo, et al. (U. Connecticut) **Mental illness and the impact of believing others know about it.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 1-5.—Reports 2 studies measuring the impact upon 30 male inpatients and 29 male outpatients of believing others have become aware of their psychiatric history. Ss thought the interest was in determining if another person would behave the same toward mental patients and controls. 1/2 the Ss were told the other person knew they were patients and the remainder that he believed them to be nonpatients.

Believing others were aware of their status caused Ss to feel less appreciated, to find a task more difficult, and to perform more poorly, and they were perceived as more tense, anxious, and poorly adjusted by an O. (20 ref.)—*Journal abstract*.

10312. Ferguson, R. S. & Carney, M. W. (U. Salford, England) **Interpersonal considerations and judgments in a day hospital.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 397-403.—115 1-yr follow-ups of clients of a treatment regime that emphasized awareness of social relationships and group learning experiences showed 83 to be enthusiastic or favorable and a significant relation between enthusiasm and clinical outcome. General practitioners, in contrast, rated the service below average. Patients rated relationships with the nurses of greatest and relationships with social workers of least therapeutic benefit. Evaluation of the doctor was intermediate. Clinical recovery did not differ for these relationship ratings.—R. L. Sulzer.

10313. Fitzgerald, Jack D. (U. Iowa) **Consensus in the definition of the psychiatric patient throughout the patient career.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1371-1372.

10314. Flumara, Santi R. & Frighi, Luigi. (Università degli Studi di Roma, Italy) **Sulla diffusione delle malattie mentali in Italia: Studio statistico ed ecologico.** [On the spread of mental illnesses in Italy: A statistical and ecological study.] *Rivista di Psichiatria*, 1969(Mar), Vol. 4(2), 110-140.—Conducted an epidemiological study in Italy to compare the number of mental illnesses in 1959 and 1964. 10,391,009 cases were studied in 1959 and 14,202,611, in 1964. The total incidence of mental diseases with specific reference to Section V of the nosological classification adopted by the National Health Insurance Institute (INAM) which includes mental disturbances, neurosis, and personality disorders was 22.917% in 1959 and 29.650% in 1964. This refers only to outpatients. With the addition of hospitalized cases, the percentages are increased to 23.98% in 1959 and 31.502% in 1964. The increase in mental illnesses is true only of psychoneurotic disorders; psychotic disorders have remained constant. Further research is needed regarding the correlation between the incidence of psychic disturbances and the specific outpatient INAM service in Rome and its environs. (54 ref.)—A. M. Farfaglia.

10315. Gaburri, Eugenio; De Simone, Gilda G., & Brazzelli, Carlo. **Le caratteropatologie nella psicoterapia istituzionale.** [Character disorders in institutional psychotherapy.] *Rivista di Psichiatria*, 1968(Jul), Vol. 3(4), 355-361. Patients with character disorders differ from others in the following ways: (a) they result in the greatest therapeutic disillusion; (b) they give rise to trouble by pathological behavior (alcoholic abuse); (c) they have "good conduct" over long periods; and (d) they are considered "not the real sick" by the hospital staff. Institutional psychotherapy is the utilization of plenary meeting including patients so that the entire department can gather as much information as possible on the patient. These patients either oppose or assume the position of leader. The opposition attitude appears at the beginning of institutional psychotherapy. When the patient assumes the role of leader of the community, it is to him a sort of psychodramatic game. In most instances the success is seen in that the S, finding himself in a position between the superego and the ideal ego, is able to perform through "reality testing."—A. M. Farfaglia.

10316. Hilbun, William B. (Medical Coll. of Georgia, Augusta) **Dermatoglyphic findings on a group of psychotic children.** *Journal of Nervous & Mental Disease*, 1970(Nov), Vol. 151(5), 352-358.—Describes a pilot study with a report of the dermatoglyphic findings in a group of 20 psychotic children, most of whom could be classified as having childhood schizophrenia. Excluded were children with a diagnosis of organic brain syndrome and mental retardation with secondary psychosis. Results show an increased incidence in the occurrence of certain dermatoglyphic findings, including several rare patterns, when compared with those expected in a randomly selected normal population. The significance of this difference is not clear and can only be speculated upon. (19 ref.)—*Journal summary*.

10317. Hinchliffe, Mary; Lancashire, Meredith, & Roberts, F. J. (U. Bristol, England) **Eye-contact and depression: A preliminary report.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 571-572.—Studied the frequency and duration of eye-contact in 14 depressed psychiatric patients and 14 nondepressed controls, matched for age, sex, and social class. Depression was assessed by using the Zung Self-Rating Scale. Results show that the duration and frequency of eye-contact were significantly different between the 2 groups.—*Journal summary*.

10318. Kendell, R. E. & Gourlay, Jane. (Maudsley Hosp., Inst. of Psychiatry, London, England) **The clinical distinction between psychotic and neurotic depressions.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 257-260.—A discriminant function analysis including comparison between 63 neurotic depressives and 115 psychotics, who were consecutive admissions to New York and London public mental hospitals, produced a distribution of weighted scores that was unimodal and did not differ significantly from a normal distribution. This "reinforces the case for replacing the existing categorical classification of depressions by a dimensional classification."—R. L. Sulzer.

10319. Kendell, R. E. & Gourlay, Jane. (Maudsley Hosp., Inst. of Psychiatry, London, England) **The clinical distinction between the affective psychoses and schizophrenia.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 261-266.—A discriminant function analysis performed on 146 schizophrenics and 146 patients with affective psychoses produced equivocal results. The distribution of scores was trimodal with the boundary between schizophrenic and affective Ss at the peak of the distribution. Results of a further analysis with different data did not support the view that schizophrenic and affective psychoses are distinct entities.—R. L. Sulzer.

10320. Kolle, K. **Psychopathen für sich und unter sich: Ein quasi-philosophischer Exkurs über den Sonderling.** [Psychopaths: A quasi-philosophical digression on the eccentric.] *Psychiatria Clinica*, 1969, Vol. 2(5), 257-267.—Discusses the classical concept of the psychopathic personality and the personality of the eccentric using illustrative material from the writings of Nietzsche, Heine, Rilke, Hoffmannsthal, and Burkhardt. It is concluded that the eccentric should not be labeled as a psychopath. (English summary)—B. A. Stanton.

10321. Kroeker, L. L., Cole, C. W., & Oetting, E. R. (U. Rochester) **Indices of pathology in acquisition responses by mental patients on a fixed-ratio schedule.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 691-699.—Examined the acquisition of response

rates and response patterning characteristics of a relatively heterogeneous group. 10 hospitalized psychiatric patients and 5 institution employees were run for 40 min. on a fixed ratio (FR) 75 schedule in which nickels were used as reinforcers for button-pressing responses. All Ss were able to learn the response; moreover, there was clear evidence that mental patients' behavior is highly shapable under these conditions and that they will develop a high and consistent rate of responding to immediate reinforcement on FR schedules. Individual differences related to patient status indicate that operant procedures are potentially useful in the assessment of behavior pathology and, perhaps, in the prediction of response to treatment.—*Journal abstract.*

10322. Lin, Tsung-yl. **The epidemiological study of mental disorders.** *Journal of Psychiatric Nursing & Mental Health Services*, 1969(Jan), Vol. 7(1), 42-47.—Discusses epidemiological studies and indicates that they can facilitate the realistic assessment of the extent of a mental health problem in a given community and yield data for assessment of preventive or curative services.

10323. Maier, Louis. (Catholic U. of America) **A resocialization program on state mental hospital wards serving long-term patients.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2503-2504.

10324. Massa, Silvano. **Considerazioni sulle resistenze del caratteriali in psicoterapia: Osservazioni su un caso clinico.** [Some considerations on character resistances of character disorders in psychotherapy: Observations of one clinical case.] *Rivista di Psichiatria*, 1968(Jul), Vol. 3(4), 384-388.—Presents a case of a 25-yr-old male showing the character itself as the principal pathogenic structure or the principal symptom upon which neurotic conflicts have developed. The S was treated with psychotherapy of an analytical nature. After a brilliant scholastic record, S began to show a notable decline in his studies and a growing difficulty in social relationships. His father was tyrannical, aggressive, and violent, while the mother lacked femininity. Leaving his grandmother's protective climate to go to his parent's punitive and prohibitive climate resulted in a sadistic attitude toward the feminine world, and incapacity to love, passive homosexuality, and hence, malformation of the ego.—A. M. Farfaglia.

10325. Resner, Gerald & Hartog, Joseph. (U. California, San Francisco) **Concepts and terminology of mental disorder among Malays.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 369-382.—Describes the concepts of mental disorder as they emerged spontaneously during 2 yr. of psychiatric experience in West Malaysia. A number of concepts were translated into Western frameworks and described. Certain universal bases and clues to labeling and treatment of mental disorders are suggested. A skeletal community mental health program was revealed in existence.—A. Krichev.

10326. Roy, Chunilal; Choudhuri, Adjit, & Irvine, Donald. (Mental Health Clinic, Swift Current, Saskatchewan, Canada) **The prevalence of mental disorders among Saskatchewan Indians.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 383-392.—A statistical analysis of hospital 1st admissions from a Saskatchewan area containing 18 rural and 10 Indian communities showed a significantly higher incidence of mental disorder in the Indian communities. Indian samples also showed higher incidence of schizophrenics and retardates. An explanation is made of the

rapid social changes found in those communities. Findings are related to future cross-cultural psychiatric research and problems. (26 ref.)—A. Krichev.

10327. Saks, Michael J., Edelstein, Jane; Draguns, Juris G., & de Fundia, Toba. (Ohio State U.) **Social class and social mobility in relation to psychiatric symptomatology in Argentina.** *Revista Interamericana de Psicología*, 1970(Jun), Vol. 4(2), 105-121.—Investigated symptoms, symptom dominance patterns, and precipitating circumstances in groups of male and female Argentine psychiatric patients (N = 117) divided on the basis of father's socioeconomic level, own socioeconomic level, and social mobility. Upon comparison of the results obtained with those of a closely related North American study, the conclusion was reached that virtually no findings were identical in the 2 investigations. There were, however, similarities in theme and character of the relationships between symptom and social class variables in the 2 countries. Overt, impulsive, and bizarre symptomatology predominated among lower-class patients, intermediate levels of socioeconomic status tended toward self-blame and guilt, and the highest groups included in this study expressed anxiety, tension, and alienation. The intercultural consistency and the specifically Argentine components of these findings are discussed in relation to the available reports on the ways of life of normal Argentines at several levels of the socioeconomic hierarchy. (Spanish & Portuguese summaries) (42 ref.)—*Journal abstract.*

10328. Scoppa, A. (U. Palermo, Italy) **Il sistema nervoso vegetativo nelle distimie.** [The nervous vegetative system in dysthymia.] *Acta Neurologica*, 1970(Mar), Vol. 25(2), 261-274.—Studied from 1959-1967 113 male and 103 female 19-84 yr. olds with dysthymic disturbances. Ss were divided according to the following groups: endogenous, reactive, and neurotic depression. The method used was that of Schneider and Genevard. In all Ss a disturbance of the vegetative nervous system was found. As in the studies of P. Larson and L. Morgan, where nuclear alterations were found in the hypothalamic grey matter of manic-depressives, one can better understand the explicit role of the constitutional factors. According to A. Rubino, these factors can be summarized essentially in the particular reactive disposition of the diencephalic centers in as far as it concerns the vital dynamism and affective tone. (English summary) (27 ref.)—A. M. Farfaglia.

10329. Torre, Mottram P. (De Paul Community Mental Health Center, New Orleans, La.) **Psychopathology and political leadership.** *American Journal of Psychotherapy*, 1970(Oct), Vol. 24(4), 611-626.—Under-scores the vulnerability of the nation to the actions of disordered personalities in top political offices. Calls for safeguards in political systems to protect against irrational leaders.—W. Vernon.

10330. van Praag, H. M. (Psychiatric University Clinic, Groningen, Netherlands) **The complementary aspect in the relation between biological and psychodynamic psychiatry.** *Psychiatria Clinica*, 1969, Vol. 2(5), 307-318.—Views concerning the pathogenesis of psychopathological phenomena have been governed by a polarity of 2 approaches: the somatic approach with its natural science tradition, and a more spiritualistic approach. Biological and psychodynamic psychiatry are the respective representatives of these trends. It is argued that the biological and psychodynamic approaches are complementary rather than opposite. This contention is

elucidated on the basis of 3 depression models: a biochemical, physiological, and psychodynamic model. (24 ref.)—*Journal summary*.

Neurosis & Emotional Disorder

10331. ———. **Causes of enuresis.** *British Medical Journal*, 1969(Apr), Vol. 2(5649), 63-64.—The maturation of the nervous system is an important factor in primary enuresis. There is a family history of enuresis in 70% of the cases of the primary type. Additional psychological and social factors (i.e., emotional deprivation, deficient physical care, marital instability, and parental crime) were strongly related to the incidence of enuresis. An organic disease is only occasionally the cause. Constant dribbling, e.g., may suggest urethral obstruction. Other causes include infection, sacral lipoma, or the absence of abdominal muscle tone. Secondary enuresis is almost entirely psychosocial. Occasionally, a child relapses because of the development of polyuria or suffering a degenerative disease of the nervous system. The child should not be forced to sit on the toilet against his will. The most important cause of difficulty was seen to be resistance to training which was produced by forceful parental coercion.—*I. Halev*.

10332. Arioni, Bianca M., Soccorsi, Silvia; Fischer, Grazia M., & Cannoni, Gianmaria. (U. Roma, Italy) **Il problema del caratteropatologico dimesso alla luce di un'indagine catamnestic.** [The problem of the released patient with a character disorder in the light of a catamnestic study.] *Rivista di Psichiatria*, 1969(Nov), Vol. 4(6), 479-509.—Studied released adolescent Ss with character disorder syndromes from a therapeutic, rather than diagnostic, viewpoint. With this type of S, new environmental solutions were necessary but impossible. After 2-3 yr. the Ss (or relatives and educators) were interviewed to see if the Ss in fact needed socio-psychological therapy at the beginning or before their release. The problem of character disorder is studied according to 3 groups: neurotic, psychotic, and sociopathic behavior. The reeducative system and reformative laws in Italy are outlined and held as insufficient and badly organized. A minor with a character disorder is often treated like a delinquent. 6 neurotic, 1 psychotic, and 4 sociopathic 13-19 yr. old females who served as Ss, were studied in detail according to the following outline: (a) case history upon hospitalization, (b) clinical stay, (c) catamnestic interview, and (d) conclusions drawn. It is concluded that sociopsychological therapy was necessary, and there is a deficiency of therapeutic facilities. (17 ref.)—*A. M. Farfaglia*.

10333. Bugental, Daphne E., Love, Leonore R., Kaswan, Jacques W., & April, Carol. (U. California, Los Angeles) **Verbal-nonverbal conflict in parental messages to normal and disturbed children.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 6-10.—Analyzed videotaped parent-child communication within 20 families containing a disturbed child (referred by schools for chronic behavior or emotional problems) and 10 normal control families. Parental messages were judged for evaluative content in verbal (typescript of message), vocal (tone of voice), and visual (facial expressions, gestures, etc.) channels. Significantly more ($p=.05$) disturbed mothers (59%) produced messages containing evaluative conflict between channels than did

normal mothers (10%); no difference was found between normal and disturbed fathers. The sons of mothers producing conflicting messages were found to be higher on school aggressiveness than the sons of nonconflicting mothers ($p=.05$). (15 ref.)—*Journal abstract*.

10334. Conforto, Carmelo; Delmonte, Pietro; Gilberti, Franco, & Montanari, Giovanni. **III Convegno sul tema: "L'impotenza sessuale": Impotenza sessuale e depressione: Considerazioni cliniche.** [3rd annual convention on the subject: "Sexual impotence": Sexual impotence and depression: Clinical considerations.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 301-307.—Studied the relationship between sexual impotence and depressive states. Interest lies in the scarcity of literature on the subject and the variations of interpretation. 4 34-41 yr. old male Ss were studied without routine examinations. 2 were cured with amitriptyline as well as psychotherapeutic sessions; 2 were cured with psychotherapy alone. The 1st case concerned an endogenous depressive where impotence was secondary. The 2nd case showed endogenous constitutional factors in phobias of the loss of hair and of syphilis. The 3rd case of prolonged psychogenic impotence, the depressive state was secondary. The 4th case, which was the most complicated, impotence was an antidepressive defense because of deep feelings of guilt concerning his sex. The contributions of A. J. Cooper and J. Johnson on impotence are considered too simplified. Constitutional factors must be studied in detail along with biological and psychopathological factors. Impotence can be a type of defensive behavior.—*A. M. Farfaglia*.

10335. Darcourt, G. & Beclé, J. (Nice Hosp., France) **Les fugues dans les névroses et les déséquilibres psychiques chez le grand adolescent et l'adulte.** [Fugues as symptoms of neurosis and emotional disturbances in late adolescence and adulthood.] *Acta Psychiatrica Belgica*, 1970(Jan), Vol. 70(1), 33-77.—With the diversity of existing fugues, it is maintained that classification of such is impossible. It is suggested that fugues should be considered as a basic fact. The symptom can, however, be categorized on the basis of frequency, length, and type of behavior during a particular fugue. It is concluded that each fugue must be analyzed as a specific case with special consideration of various aspects inherent in the situation. (3 p. ref.)—*I. Sirotnin*.

10336. Flipppo, Joseph R. & Lewinsohn, Peter M. (New Mexico Highlands U.) **Effects of failure on the self-esteem of depressed and nondepressed subjects.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 151.—Hypothesized that depressed Ss would show greater negative change in self-esteem in response to failure than nondepressed Ss, and investigated the relationship between lability and stability in mood and susceptibility of self-esteem to failure. 24 depressed and 24 nondepressed Ss completed daily mood ratings for 1 wk. and were categorized into stabile and labile groups. Each S was given a puzzle-solving task on which a 25, 50, or 75% failure condition was possible. Before and after the task, each S completed a self-esteem measure. Differences between depressed and nondepressed, stabile and labile groups did not reach statistical significance.—*S. Knapp*.

10337. Ierodiakonou, C. S. (U. Thessaloniki, AHEPA Hosp., Greece) **The effect of a threat of war on neurotic patients in psychotherapy.** *American Journal of Psychotherapy*, 1970(Oct), Vol. 24(4), 643-651.—Dis-

cusses the cases of 14 Greek neurotics during time of possible imminent war over the 1967 Cyprus problem. It is concluded that while normals react to war threat with emotional "flight" reaction, neurotic males adopt a "fight" attitude, seeing war as a possible solution to their inner problems, allowing impulse expression and possible hero status.—*W. Vernon.*

10338. Marks, Isaac M. (Maudsley Hosp., Inst. of Psychiatry, London, England) **The origins of phobic states.** *American Journal of Psychotherapy*, 1970(Oct), Vol. 24(4), 652-676.—Develops a multiple-factor approach to the etiology of chronic phobias. Literature on age at development, genetic endowment, learning theory, modeling, and psychoanalytic theory is considered. (73 ref.)—*W. Vernon.*

10339. Nichols, Keith A. & Berg, Ian. (U. Exeter, England) **School phobia and self-evaluation.** *Journal of Child Psychology & Psychiatry & Allied Disciplines*, 1970(Nov), Vol. 11(2), 133-141.—Tested by means of a semantic differential the hypothesis that school phobic children hold higher levels of self-evaluation than similar nonschool phobic children. The level of self-evaluation in a group of 25 school phobics was compared with that of 23 controls attending a psychiatric clinic with various difficulties other than phobic reactions. No overall difference was found between the groups on scores taken from individual semantic differential scales loading on a factor of evaluation. There was a general tendency for chronic school phobics to show the lowest level of self-evaluation. (21 ref.)—*Journal summary.*

10340. Palazzoli, Mara S. (U. Basel, Inst. for Psychohygiene & Psychotherapie, Switzerland) **Die Bildung des körperbewusstseins: II. Beitrag einer neuen Auswertungsmethode des Rorschach-Tests zur Untersuchung von Störungen der körperlichkeit.** [Psychopathology of bodily experience: II. Contribution of a new Rorschach scoring.] *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 241-256.—Anorexic patients of the stable type, who had never had crises of severe bulimia, revealed at the Rorschach test a high degree of focusing of attention, a stable and well-organized capacity for perception, experience, and communication. In some cases their thinking and communication could be classified as restricted paranoid type of thinking. On the contrary, the patients who oscillated dramatically between crises of under- and over-eating showed, in the Rorschach transactions, perceptual uncertainty or later denial of interpretation, and not infrequently, vague, and indefinite percepts. Findings reveal in these cases a deeper perceptual and cognitive disorder (fragmented type of thinking, experiencing, and communicating). In such cases there is body-image disturbance, and a body-cognition disturbance, the result of a learning-process during which the child has not learned, in the transactional relationship with the caretaker, how to accurately perceive and conceptualize his bodily needs, and how to satisfy them adequately (and independently from the caretaker) out of a direct and consistent contact with his own basic source of experience—his own body. The most serious disturbance of the body-cognition (anorexia-bulimia) could therefore be the result of a learning-process arising from confusion and wrong conditioning, on the part of the impervious mother, of the recognition and validation of the original percepts of the child.—*English summary.*

10341. Platman, S. R. & Plutchik, R. (Columbia U.) **Eysenck Personality Inventory as a mood test with**

manic-depressive patients. *Psychological Reports*, 1970(Dec), Vol. 27(3), 947-952.—Used the Eysenck Personality Inventory (EPI) as a mood indicator instead of as a trait test with a group of manic-depressives. 73 Ss completed the EPI while in a normal state, 64 while in a depressed or manic state, and 60 in 2 or more clinically defined states. Results show that depression was associated with a significant decrease in extroversion and a significant increase in neuroticism. The manic state, however, was not clearly differentiated from the normal one. It appears that the inventory may be a useful indicator of depressive mood.—*Journal abstract.*

10342. Raynolds, E. H., Preece, J. M., Bailey, J., & Coppen, Alec. (National Hosp. for Nervous Diseases, London, England) **Folate deficiency in depressive illness.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 287-292.—Measured serum folate and vitamin B₁₂ levels in 101 depressed patients. Subnormal folate levels were found in 1/4 of Ss, who had significantly lower validity scores and higher depressive scores on the Marke-Nyman Temperament Scale. Whether causal of depression through interference with tyrosine or tryptophan hydroxylation, or merely a consequence of dietary deficiency is not certain, but these interpretations are not mutually exclusive and could interact in a vicious cycle. A smaller portion of Ss showed lowered vitamin B₁₂ levels, and 5 Ss with both folate and B₁₂ levels depressed, were the most abnormal in behavior. (20 ref.)—*R. L. Sulzer.*

10343. Renschmidt, H. & Dauner, I. (U. Marburg, Children's Psychiatric Clinic, W. Germany) **Lerntheoretische Aspekte zur Genese von Zwangssphänomenen.** [Aspects of learning in the genesis of compulsion phenomena.] *Acta Paedopsychiatrica*, 1970, Vol. 37(6), 154-160.—3 genetic forms of mental symptoms exist: trauma, impact, and learning. For therapy, compulsion phenomena are classified according to their contents and their relation to anxiety. Clinical experience and animal experimentation indicate that compulsion phenomena are learned. Stress is laid on the poor quality of the patient's contacts and the hereditary transmission of anacastic traits in their parents. Therapeutic principles inhere in aversion therapy, negative training, thought inhibition, and systematic desensitization.—*G. Rubin-Rabson.*

10344. Rosenberg, Blanca N. & Short, Jacqueline S. **Differential treatment of the pseudoneurotic client.** *Social Casework*, 1970(Nov), Vol. 51(9), 556-565.—Assessment of a person's ego function and adaptive capacities help to differentiate between a neurotic and pseudoneurotic client. Goals suitable for open-ended and planned-timed treatment center around: (a) developing healthier coping patterns; (b) building the ego; (c) developing reality orientation through work, marriage, and parenthood; (d) promoting object relationships, increasing frustration tolerance; and (e) reinforcing cognitive development.—*M. W. Linn.*

10345. Schachter, M. (Committee on Retarded Children, Dept. of Neuropsychiatry, Marseille, France) **A propos d'une destruction compulsive, partielle, des vêtements (allotriorhexis) chez une adolescente.** [A case of compulsive partial destruction of clothes (allotriorhexia) in an adolescent girl.] *Acta Paedopsychiatrica*, 1970, Vol. 37(6), 160-166.—Allotriorhexia and allotriophagy compulsive, not necessarily unconscious, behavior is rare. The swallowing of clothing fibers by a 15-yr-old girl, not yet arrived at menarche, represents 3

problems: psychosexual, inferiority feelings or autosomatic insufficiency, and a child-parent difficulty.

—G. Rubin-Rabson.

10346. Thetford, William N. & Schucman, Helen. (Columbia U., Coll. of Physicians & Surgeons) **Conversion reactions and personality traits.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 1005-1006.—Tested 2 previously supported hypotheses with 30 Ss showing conversion reactions. Relations between their symptoms and personality traits as identified by the Personality Assessment System (PAS) were studied. Results support the hypotheses and provide further evidence of the usefulness of the PAS in studying patient groups. —*Journal abstract.*

10347. Tietz, Walter. (U. Southern California, Medical Center, Los Angeles) **School phobia and the fear of death.** *Mental Hygiene*, 1970(Oct), Vol. 54(4), 565-568.—A. M. Cawley.

10348. Wolpe, Joseph. (Temple U., Medical Center) **Transcript of initial interview in a case of depression.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 71-78.—Presents an interview with a 41-yr-old depressed woman which provides a typical example of behavioristic history-taking, defining areas of disturbance and determining their stimulus antecedents. It became apparent that while the S's unsatisfactory life situation accounted to some extent for her depressed feeling, it was more fundamentally related to guilt feelings in connection with normal sexual impulses. During her marriage, depression had been related to restriction of social activity due to a phobia for people in groups, and sometimes to sexual frustration. 2 alternative programs for achieving a satisfactory life situation were suggested and apparently accepted. —*Journal abstract.*

10349. Wyatt, Richard J., et al. (National Inst. of Mental Health, Bethesda, Md.) **Resting plasma catecholamine concentrations in patients with depression and anxiety.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 65-70.—Reports that the total resting plasma catecholamine concentration from 13 20-61 yr. old drug-free, depressed patients was significantly elevated over concentrations from 47 normal controls. Differential determinations of epinephrine and norepinephrine revealed that both catecholamine components were elevated in the Ss. The literature on norepinephrine concentrations in brain, spinal fluid, and urinary excretion is reviewed and indicates that rather than being decreased, norepinephrine has been found to be either unchanged or increased in depressed patients. (37 ref.)—*Journal abstract.*

Psychosis

10350. Åkesson, H. O. (U. Gothenburg, St. Jörgen Hosp., Sweden) **A population study of senile and arteriosclerotic psychoses.** *Human Heredity*, 1969, Vol. 19(5), 546-566.—Studied the population of an area on the west coast of Sweden for the frequency and other demographic features of senile and arteriosclerotic psychosis, making both a transverse and period study, and reckoning only with cases having reached the stage of unremitting disorientation as to time and place. The underlying population for the study consisted of 2071 men and 2127 women aged 60 and over. The prevalence and incidence of the 2 forms of psychosis were calculated. The cases found were studied for mortality,

duration of disease, length of stays in hospitals for physical disease, and place of residence. Finally a genetic analysis was made of the 2 diseases. It was found that most Ss died much sooner than others their age. Parents and sibs of affected Ss were much more apt to be similarly affected than the standard population. —*Journal abstract.*

10351. Cattach, Narelle. **Management and treatment of the depressive psychoses.** *Australian Occupational Therapy Journal*, 1968(Jul), Vol. 15(3), 32-37.—Describes briefly the symptoms of depressive psychosis, chemotherapy, somatic and operative treatment, and psychoanalytic treatment. The aim of the occupational therapist is to develop in the patient a feeling of security which will extend to his family, occupation, and social life. Means to implement treatment plans are noted and discussed, e.g., strengthening the patients feeling of security, involvement of the patient in selected activities, and guiding the patient into social contacts. —S. Knapp.

10352. Cowen, Murray A. (State U. New York, Upstate Medical Center, Syracuse) **Electrophysiological studies on the brain: Effects of nucleotide and tryptophan metabolites as modified by polyamines in normal and psychotic subjects.** *Diseases of the Nervous System*, 1970(Nov), Vol. 31(11), 772-780.—Describes the application of the transepithelial direct current (TCDC) potentials to a variety of studies of normal and psychotic Ss. Functional correlates of TCDC potentials to anxiety mechanisms, normal behavior, and psychotic processes are summarized. A tentative formulation of the pathophysiology of schizophrenia is offered. Tables relating PCDC potentials to nucleoprotein metabolism, methylation of biogenic amines, and cerebrovascular permeability are included. (31 ref.)—P. McMillan.

10353. Gall, H. (Ernst Moritz Arndt U., Neurological Clinic, Greifswald, E. Germany) **Der Einfluss interkurrenter Hautallergien auf den Verlauf depressiver Psychosen.** [The influence of concurrent skin allergies on the progress of depressive psychosis.] *Psychiatrie, Neurologie und medizinische Psychologie*, 1970(Jul), Vol. 22(7), 259-262.—Considerable improvement was observed in 11 cases of severe depressive psychosis when in each case there was a simultaneous appearance of a skin rash which was a side effect of the medications. The mechanism of a close periodicity between the CNS and allergy is supported. Alternations of allergies with psychoses have been previously reported for migraine and asthma. (25 ref.)—K. J. Hartman.

10354. Hiatt, Rosemary. **The depressive psychoses.** *Australian Occupational Therapy Journal*, 1968(Jul), Vol. 15(3), 21-31.—Discusses the etiology and symptoms of depressive psychoses, the depressive phase of manic-depressive psychosis, involutional melancholia, endogenous or psychotic depression, postpartum psychosis, and schizoaffective psychosis. Psychogenic, somatic, genetic, constitutional, age, and precipitating factors are briefly noted. The management of depressive illness is seen as primarily the function of supportive psychotherapy and drug therapy with antidepressants and MAO inhibitors, although ECT and prefrontal leucotomy may be indicated in certain cases. It is concluded that the risk of suicide with depressive patients must always be considered. —S. Knapp.

10355. Hullin, R. P. & Court, G. (U. Leeds, England) **Fasting blood lipid concentrations in manic-de-**

pressive psychosis. *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 275-285.—Serial investigations of mental patients and normal Ss demonstrated that "the fasting serum lipid pattern was characteristic of the individual and was not greatly affected by considerable changes in the dietary intake." A study is reported in which significant changes in the serum lipid concentrations were found with a manic-depressive patient to correlate with mood cycle. Another patient without affective changes but receiving the same diet showed no such lipid pattern changes. ECT appeared to produce changes in the fasting serum lipid pattern of depressed patients, and changes were most marked when associated with improvement in the mental state.—*R. L. Sulzer.*

10356. **Ivanitskiĭ, A. M.** (Central Research Inst. of Forensic Psychiatry, Moscow, USSR) **Vyzvannye otvety i analiz razdrazhenii v kore golovnogo mozga cheloveka.** [Evoked responses and the analysis of stimulation in the human cerebral cortex.] *Zhurnal Vyssei Nervnoi Deyatel'nosti*, 1969(Nov), Vol. 19(6), 1020-1026.—20 normal Ss and 51 reactive psychotics with hysterical background (age distribution for all: 20-50 yr.) participated in a study of the "physiological processes, underlying the evaluation of stimuli in the cerebral cortex with respect to 2 main characteristics: physical parameters and their significance for 1 or another activity of the organism." Recordings were made of the evoked responses of the occipital cortex to photic stimulation, presented in flashes at 2-5 sec. intervals. An analysis was then undertaken of the different informational characteristics of their early and late components. The amplitude of the 1st 2 waves of the response in psychotics was considerably diminished as compared to that in normals. Late waves, on the contrary, exhibited a tendency toward increase. These data point to blockade of the specific conducting system in reactive psychotics along with retention of conduction in the nonspecific system. It appears that a change in the relationship between the 2 systems, recordable by the evoked potentials method, leads to a change in "afferential synthesis and perception"—a change which lies at the basis of several clinical manifestations of "reactive hysterical psychosis."—*I. D. London.*

10357. **Lefebvre, Pierre.** **Approches nouvelles du problème de la psychose.** [New approaches to the problem of psychosis.] *Interprétation*, 1969(Oct), Vol. 3(4), 67-80.—Summarizes a series of seminars and lectures dealing with Lacan's studies on psychosis, "retracing the path which led Lacan to formulate an altogether new theory of psychosis," based on the perception of reality (resulting from converging organization of the spheres of the "Imaginary and Symbolic"). Psychic reality can be attained only if the S has achieved "a sort of balanced rapprochement of both spheres In psychosis there is present a structural defect resulting from the absence of convergence of Imaginary and Symbolic The terrain of psychosis is prepared by a denial, in the S, of the significance of the paternal metaphor." This denial Lacan called "forclusion," the inability of the S to symbolize an essential fantasy.—*T. N. Webster.*

10358. **Lorr, Maurice & Hamlin, Roy M.** (Catholic U. of America) **A multimethod factor analysis of behavioral and objective measures of psychopathology.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 136-141.—Evaluated the extent to which certain objective tests, ward behavior ratings, recorded

verbalization scores, and interview behavior ratings possessed convergent and discriminant validity for 10 psychotic syndromes in a varied group of 125 psychotics drawn from 5 hospitals. A multimethod factor analysis was made of the 10 interview behavior and 12 ward behavior syndrome scores, and a similar analysis made of the entire set of 48 variables. The 1st analysis yielded 10 multimethod factors that corresponded closely to the original 10 interview syndromes. In the 2nd analysis, 12 interpretable factors were obtained, all of which exhibited convergent validity for 2 or 3 method sources. 1 or more objective test variables were meaningfully associated with each of the factors except 1. It is concluded that the convergent and discriminant validity of the syndromes is strongly supported.—*Journal abstract.*

10359. **Wharton, B. K.** (Runwell Hosp., Wickford, England) **Nasal decongestants and paranoid psychosis.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 439-440.—Describes the case of a 37-yr-old Royal Air Force officer who became paranoid after taking 30 anahist (a decongestant) tablets. This cold medicine contains a drug similar to amphetamine.—*R. L. Sulzer.*

10360. **Winokur, George.** (Washington U., Medical School) **Genetic findings and methodological considerations in manic depressive disease.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 267-274.—Family data on 89 manic Ss indicate that an X-linked dominant factor is involved in the transmission of manic depressive disease. Support for this position is seen in previous studies, involving the color blindness locus and the Xg blood system locus. Since the illness is not clinically homogeneous within families, and relatives are likely to have only depression instead of the bipolar picture, a 2nd genetic factor may be sought. Present data provide some support. A method for more definite determination of whether the 2nd genetic factor may be linked with a known genetic factor is proposed.—*R. L. Sulzer.*

Schizophrenia

10361. **Auger, Eugene R.** (U. California, Los Angeles) **Nonverbal communication of normal individuals and schizophrenic patients in the psychological interview.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3860.

10362. **Bauman, Edward.** (Lakehead U., Port Arthur, Ontario, Canada) **Schizophrenic short-term memory: The role of organization at input.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 14-19.—Investigated schizophrenics' ability to utilize input organization and auditory cues for recall. 32 7-letter lists, varying in degree of organization, were presented to 24 schizophrenic and 24 normal Ss for forced-order recall. 1/2 of the lists were vocalized aloud, the remainder articulated silently. Normals gave significantly better recall than schizophrenics, and voicing facilitated recall in both groups. Schizophrenics had greater difficulty in recalling items in the last serial positions than did normals. Schizophrenics' omissions increased monotonically with serial position, while the omissions of normals followed the serial position curve. Findings suggest that schizophrenics do utilize the cues of input organization and vocalization for recall, but the process

of responding seems to engender excessive output interference which makes retrieval of late input items difficult. (35 ref.)—*Journal abstract*.

10364. Brooksbank, B. W., et al. (Carshalton & West Park Hosp., Epsom, England) **Androgen excretion and physique in schizophrenia.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 413-420.—24 male schizophrenics and 10 controls did not differ in urinary excretion or androgyny score, but calf muscle diameter was correlated with testosterone excretion in the psychotic group. Testosterone and androsthenol urinary levels were positively correlated in both groups. These findings support Bleuler's conclusion that endocrine and schizophrenic processes are related only in individuals or small subgroups, not in the total group of schizophrenics. (33 ref.)—R. L. Sulzer.

10365. Calhoun, James F. (U. Illinois) **Comment on differentiating paranoid from nonparanoid schizophrenics.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 104-105.—Compared 3 methods of differentiating paranoid from nonparanoid schizophrenics: (a) official hospital diagnosis; (b) behavior ratings based on specific characteristics; and (c) self-report using scales, e.g., the MMPI. It was found that a and b were significantly correlated, while c correlated with neither of the 2 techniques in 97 males from a Veterans Administration hospital with the general diagnosis of schizophrenia. (15 ref.)—S. Knapp.

10366. Callaway, Enoch; Jones, Reese T., & Donchin, Emanuel. (Langley Porter Neuropsychiatric Inst., San Francisco, Calif.) **Auditory evoked potential variability in schizophrenia.** *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 421-428.—Investigated the observed correlation between averaged evoked potential (AEP) and schizophrenic thought disorder. 10 normal and 10 schizophrenic Ss were tested with same tone and different tone sequences. Variability of the individual brain wave potentials comprising an AEP was greater for schizophrenic than for normal Ss. In schizophrenics this increased AEP variability resulted in fewer similarities and lowered correlations between 2 AEPs evoked by tones of the same pitch. The increased difference between AEPs to tones of 2 different pitches found in schizophrenia seemed to be a function of increased AEP variability. Increase of AEP variability in schizophrenic patients reflects response variability and is not principally the result of increased background EEG variability. AEP standard deviation is highly correlated with AEP amplitude, and methods of correcting for this are discussed. (French summary)—*Journal summary*.

10370. Donchin, Emanuel; Callaway, Enoch, & Jones, Reese T. (U. Illinois) **Auditory evoked potential variability in schizophrenia: II. The application of discriminant analysis.** *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 429-440.—Analyzed the data recorded by E. Callaway, R. Jones, and E. Donchin (see PA. Vol. 45:Issue 6) in a study of degree of dissimilarity of 2-tone average evoked potentials (AEPs) in normal and schizophrenic Ss by the Step-Wise Discriminant Analysis (SWDA) technique. Analysis was undertaken to determine if (a) groups of single-trial records obtained with 2 dissimilar tones show a greater dispersion than groups of single-trial records obtained with identical tones, and (b) the degree to which the dissimilarity of 2-tone AEPs, if found, is consistent between Ss. Analysis of the 2-tone AEPs demonstrated that (a) although there is an increased dissimilarity between the AEPs to dissimilar tones, there is no appreciable difference between schizophrenic and normal Ss; and (b) there is little consistency in the AEP components that differentiate the 2 AEPs from 1 S to the next. Results suggest that the previously reported differences between normal and schizophrenic Ss are largely the result of the increased variability in the AEP of schizophrenics rather than of a consistent tendency of the Ss to concentrate on trivial differences between the tones. (French summary) (19 ref.)—*Journal summary*.

10371. Farkas, Erwin. (U. Minnesota) **Verbal conditioning in schizophrenics as a function of rated social behavior and awareness-facilitating instructions.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3865.

10372. Gubbay, S. S., Lobascher, M., & Kingler, P. **A neurological appraisal of autistic children: Results of a Western Australian survey.** *Developmental Medicine & Child Neurology*, 1970(Aug), Vol. 12(4), 422-429.—Studied 25 autistic children from Western Australia, diagnosed according to Creak's "9 points," neurologically. 56% had unequivocal evidence of brain disorder. 84% showed evidence suggestive of encephalopathy. All were mentally retarded. (18 ref.)—P. W. Pruyser.

10373. Heston, Leonard L. (U. Iowa, Medical School) **The genetics of schizophrenic and schizoid disease.** *Science*, 1970(Jan), Vol. 167(3916), 249-256.—Reports recent research refocusing attention on genetic factors in schizophrenia. The conceptual and research problems presented by schizoid disorders, a term applied to disorders resembling schizophrenia found in relatives of schizophrenics, are considered. It is noted that schizoids and schizophrenics occur with approximately the same frequency among monozygotic twins of schizophrenic parents, 45% of the parents, children, or siblings of a schizophrenic are schizoid or schizophrenic, as are about 66% of the children where both parents are schizophrenics. It is estimated that at least 4% of the general population will show schizoid-schizophrenic disease. The application of these findings to "theoretical expectations based on the hypothesis of a defect in a single autosomal dominant gene" is presented. (48 ref.)—P. McMillan.

10374. Hinshelwood, R. D. (Marlborough Day Hosp., London, England) **The evidence for a birth order factor in schizophrenia.** *British Journal of Psychiatry*, 1970(Sep), Vol. 117(538), 293-301.—Review of previous positive evidence of a birth order effect has revealed a

paradox, i.e., that similar birth order distribution distortions occur in nonschizophrenic patients to a greater extent than in schizophrenic patients. On the assumption that the reported distortions are a feature of the general population, it was hypothesized "that they are diminished in the schizophrenic sample by a secondary overrepresentation of another intermediate birth position." The "last-but-one" position appears specifically overrepresented in schizophrenic samples. (16 ref.)—R. L. Sulzer.

10375. Kane, Eleanor M., Nutter, R. W., & Weckowicz, T. E. (U. Alberta, Edmonton, Canada) **Response to cutaneous pain in mental hospital patients.** *Journal of Abnormal Psychology*, 1971(Feb), Vol. 77(1), 52-60.—Conducted an experiment to determine how warmth detection thresholds (WDTs), pain thresholds (PTs), and pain tolerance thresholds (PTOs) to radiant heat differed between groups of process schizophrenics (G_1), reactive schizophrenics (G_2), non-schizophrenic (G_3), and normal (G_4) S groups. 15 males from each of these categories served as Ss. The manipulated independent variable was skin temperature. The dependent variables were verbal reports of WDT, PT, PTO, and pupillary response. G_1 and G_2 Ss had significantly lower mean PTs and PTOs than G_3 Ss. Significantly fewer G_2 and G_3 Ss than G_1 and G_4 Ss reported PT and PTO. The mean pupillary responses of G_2 Ss were significantly smaller than those of G_1 and G_3 Ss at WDT, PT, and PTO. It is concluded that (a) chronic institutionalized psychiatric patients display weaker reactions to potentially harmful stimuli, and (b) a dissociation between autonomic and verbal responses may occur in process schizophrenics at higher than moderate levels of noxious stimulation. (43 ref.)—*Journal abstract*.

10376. Kaufman, Gershen. (U. Rochester) **Capacity to handle unassimilable material: The coping strategies available among schizophrenics and normals.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3869-3870.

10377. Lalli, Nicola & Pancheri, Paolo. (U. Rome, Inst. of Psychiatry) **Manifestazioni isteriche nella schizofrenia: Osservazioni relative ad un caso clinico.** [Hysterical manifestations in schizophrenia: Observations in a clinical case.] *Rivista di Psichiatria*, 1969(Jan), Vol. 4(1), 21-28.—Studied a clinical case in order to find if a clinical and psychopathological relationship exists between hysterical behavior and schizophrenia. A 23-yr-old female from an average sociocultural environment with a strict and jealous father and meek mother served as the S. While a student nurse she began to manifest hysterical behavior which progresses to schizophrenia. Schizophrenia and hysteria are of different psychopathological structure. Hysteria is a behavior pattern joined to mechanisms common to all men and which may be used in various situations. In predisposed personalities these mechanisms may be used in a permanent condition (hysterical neurosis) or only in emergencies. Organic factors, e.g., epilepsy, can use these mechanisms as well. Thus, it is probable that initially in the schizophrenic process these hysterical mechanisms can be used, and more so as the individual (a psychosomatic unity) becomes more vulnerable and less efficient. (English summary) (35 ref.)—A. M. Farfaglia.

10378. Liggio, F. (U. Palermo, Clinic for Nervous System Illness, Italy) **L'apprendimento intermodale negli schizofrenici paranoidi.** [Cross-modal learning in

paranoid schizophrenics.] *Acta Neurologica*, 1970(May), Vol. 25(3), 382-391.—Studied in 18 paranoid schizophrenics the capacity of transfer in the sensorial tactile sphere of learning acquired directly through sensorial forms and vice versa. A method similar to the 1 used by H. Gaydos on normal Ss was used. For the tactile-visual and visual-tactile tests 5 3-dimensional forms were used, which did not resemble any real object. They had monosyllabic names ("Ra," "Fi") which the Ss could change, e.g., 1 S named 3 "Father," "Son," and "Holy Ghost." 11 Ss capable of visual-tactile learning, had chosen their own names for the forms. But all the Ss were capable of tactile-visual learning whether they had given names to the forms or not. It is concluded that: (a) subjective names used arbitrarily by the Ss are of great value in intersensorial communication; (b) the tactile-visual capacity is greater than the visual-tactile in these Ss; and (c) a fundamental aspect of the schizophrenic syndrome is the conduction block which creates a distortion of informative patterns, especially in septal relays. (English summary) (16 ref.)—A. M. Farfaglia.

10379. Lobascher, M. E., Kinglee, P. E., & Gubbay, S. S. (Hosp. for Sick Children, London, England) **Childhood autism: An investigation of aetiological factors in twenty-five cases.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 525-529.—Compared to matched controls, 25 autistic children: (a) scored low in IQ; (b) had more evidence of neurosis in parents, particularly fathers; (c) had families with more alcoholism, psychiatric problems, and mental retardation; (d) had come from longer gestation periods and more complicated labors; and (e) showed frequent signs of organic cerebral nervous system disease.—R. L. Sulzer.

10381. Olson, R. Paul. (2701 Brunswick Ave. N., Minneapolis, Minn.) **Effects of modeling and reinforcement on adult chronic schizophrenics.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 126-132.—Modified the expressed preferences of 32 male schizophrenics for 8 pairs of popular magazines by 1 of 3 treatments lasting 4 days. Adult male models demonstrated the desired responses in 2 of these treatments. 2 hypotheses generated from studies with children only were tested: (a) model contributes to new learning; and (b) neither the model nor the reinforcement of the model add significantly to motivation, beyond the effect that can be attributed to reinforcement of the S himself. Ss were reinforced socially and monetarily in all treatments: (a) no model, (b) model reinforced, and (c) model not reinforced. A no-treatment control condition was included. Results support the hypotheses. Application of these techniques to the more central informational and motivational deficits of schizophrenics are discussed.—*Journal abstract*.

10382. Petrilowitsch, N. **Die Schizophrenen in strukturpsychiatrischer Sicht: I. Mitteilung.** [Structural aspects of schizophrenia: I.] *Psychiatria Clinica*, 1969, Vol. 2(5), 289-306.—Differential stages having prognostic relevance can be discerned in endogenous psychoses. The developmental process proceeds from fluctuating, affectively turbulent to the increasingly formed and affectless types. The polymorph (cyloid and schizophrenic affect-laden psychoses) and the amor-

phous (hebephrenic) processes are described as opposites. In the latter, the formative process ends abruptly. The monomorph psychoses (e.g., paranoid schizophrenia) appear to assume a middle position. (20 ref.)—*English summary.*

10383. Pokorny, Alex D. & Faibish, G. M. (Veterans Administration Hosp., Houston, Tex.) **Criteria of outcome in schizophrenia. Hospital & Community Psychiatry**, 1968(Nov), Vol. 19(11), 341-346.—Reports findings of a 10-yr follow-up study of 40 male war-veteran schizophrenics designed to evaluate background data in terms of outcome, and (b) to develop a picture of each S's course since he was 1st studied. 3 Ss had died. A revised 18-item version of the Overall-Gorham Brief Psychiatric Rating Scale was used, with a 4-point scale applied to each symptom. There were also 5 independent global ratings made of each S's adjustment during the 10-yr period. It is suggested that the best indications of outcome are withdrawal, work record (or work status), and number of inpatient days excluding leave time. The 37 living Ss had spent an average of 915 days as inpatients, and readmissions averaged 5.7/S. The composite clinical rating was the most comprehensive global measure used in the study. Although there was considerable variability of outcome among Ss, the group as a whole did poorly.—*B. A. Burkard.*

10384. Rosenman, Martin F. (Morehouse Coll.) **Impression formation in schizophrenics and normals. Perceptual & Motor Skills**, 1970(Dec), Vol. 31(3), 867-877.—Investigated person perception in 8 groups of 12 schizophrenic and normal Ss dichotomized by sex and by scores on Rotter's Internal-External Control Scale (I-E). Ss rated the average American man, an unfavorably described individual, and a person who was favorably described, on 15 trait-pair scales at the "apparent" and "real" levels of personality. Ss, irrespective of pathology, were more certain of their ratings for the favorably described individual. Normal Ss were higher than schizophrenic Ss on the apparent personality rating of the average American man and on the real personality rating of the unfavorably described individual. The influence of motivational variables is discussed. (21 ref.)—*Journal abstract.*

10385. Schreiner, Jane. (Mental Hygiene Research Inst., Copenhagen, Denmark) **Nogle nyere teorier om samspil i familier til skizofrene.** [Some current theories dealing with interaction in families of schizophrenics.] *Nordisk Psykologi*, 1969, Vol. 21(4), 252-276.—Discusses the research work done by the Bateson Group, and notes that children, through the illogical and changing behavior of their parents and their inconsequential and unfair methods of meting out punishment, are forced into "hiding" and schizophrenic behavior, leading to meta-communications within the functional unit of the family. In this connection, the "double-bind" theory is discussed, analyzed, and criticized. It is suggested that causal factors in the development of schizophrenia can be found in the characteristics of the family interaction patterns, which are detrimental to the children. Therapeutic treatment should start at the parental level. (English summary) (3 p. ref.)—*P. von Toal.*

10386. Shanfield, Stephen; Tucker, Gary J., Harrow, Martin, & Detre, Thomas. (Yale U., Medical School) **The schizophrenic patient and depressive symptomatology.** *Journal of Nervous & Mental Disease*, 1970(Sep), Vol. 151(3), 203-210.—Evaluates the hypothesis that during the postpsychotic period a depressive reaction

frequently appears among schizophrenics. Data are presented on 80 consecutive psychiatric admissions (44 with acute schizophrenic reactions and 36 depressed Ss who were studied for comparative purposes). Results on depressive feelings were gathered from 3 sources: (a) standardized weekly rating scales by psychiatrists, (b) standardized daily nurses' ratings, and (c) subjective ratings. Findings indicate that the schizophrenic Ss did not show a depressive reaction in the recovery period or in the postpsychotic period. It is suggested that the clinical data responsible for this impression are related to the schizophrenic's defect in affect and, in some settings, to the recognition of depressive features which have always been present and are actually decreasing. In the past these depressive symptoms have sometimes been overshadowed by the more florid psychotic symptoms. Theoretical implications of this are discussed. (24 ref.)—*Journal abstract.*

10387. Siva Sankar, D. V. (Creedmoor State Hosp., Queens Village, N.Y.) **Biogenic amine uptake by blood platelets and RBC in childhood schizophrenia. Acta Paedopsychiatrica**, 1970, Vol. 37(6), 174-182.—The uptake of serotonin and norepinephrine by thrombocytes and erythrocytes among 200 children admitted to a child psychiatric unit shows a difference between schizophrenic and nonschizophrenic children. The lowest levels of uptake were found in autistic children.—*G. Rubin-Rabson.*

10388. Tanimukai, H., et al. (Osaka U., Medical School, Japan) **Detection of psychotomimetic N,N-dimethylated indoleamines in the urine of four schizophrenic patients.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 421-430.—In addition to tryptamine and serotonin, increases in urinary bufotenin were observed in 4 older (40-58 yr. old) male schizophrenics. Symptom worsening seemed to go along with the increased excretion when they were receiving tranlycypromine, suggesting the possibility that an acute flare-up was precipitated by drug treatment. (24 ref.)—*R. L. Sulzer.*

10389. Tedeschi, Gianfranco. **La famiglia dello schizofrenico.** [The schizophrenic's family.] *Rivista di Psichiatria*, 1969(Mar), Vol. 4(2), 100-109.—Attempts to interpret certain behavior abnormalities which characterize schizophrenic families. Did it occur prior to the patient's illness or as a result of the illness? If abnormal family behavior was in primary existence, are there somatic factors which were genetically transmitted. As yet there are no statistical conclusions, but there exists an opinion among psychiatrists that there are certain characteristics, particularly in the mother. Regarding the influence of the family on the patient, one tends to admit "that the pathological vehicle would function by means of an intense symbiotic relationship between mother and child, by means of a true and real osmosis of anxiety ... whereby the child would become the bearer of maternal problems from which he would not be able to function autonomously because of strong guilt feelings" (English summary) (27 ref.)—*A. M. Farfaglia.*

10390. Thayer, Jane H. (George Washington U.) **The relationship between levels of arousal and responsiveness in selected schizophrenics and normal subjects.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3880-3881.

10391. Walker, Harry A. & Birch, Herbert G. (Kings Park State Hosp., Child Psychiatry Research Unit, New York) **Lateral preference and right-left awareness in**

schizophrenic children. *Journal of Nervous & Mental Disease*, 1970(Nov), Vol. 151(5), 341-351.—Evaluated later dominance and right-left awareness in 80 8-11 yr. old male psychiatric inpatients. Ss had a diagnosis of childhood schizophrenia in which localizing signs of CNS damage and mental subnormality were both absent. Analyses of hand and eye usage, of hand-eye coordination, and of awareness of lateral spatial organization resulted in findings of poorly developed lateral preference and awareness. In contrast to normal children who display age-specific progressions of hand preference and lateral awareness, Ss showed no clear evidence of improvement in these abilities with increasing age. The level of organization of lateral function was only weakly related to IQ, and normal IQ in these Ss was not reflected in normal patterns of competence for lateral preference and awareness. Such disturbances in development may be considered to indicate the presence in schizophrenic children of primary CNS dysfunction and may be a factor contributing to clinical manifestations. (20 ref.)—*Journal abstract*.

10392. Walker, Harry A. & Birch, Herbert G. (New York State Department of Mental Hygiene, New York) **Neurointegrative deficiency in schizophrenic children.** *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 104-113.—Compared neurointegrative ability in 100 male schizophrenic children, 20 in each yr. for ages 7-11 with that of 220 5-12 yr. old normal children. The measure of neurointegration was auditory-visual equivalence—a task which required equation of visual dot patterns with temporal patterns of auditory stimulation. The schizophrenics at each MA were significantly inferior to the normals in their neurointegrative competence. Increase in integrative competence with age was weakly manifested in the schizophrenics as contrasted with a strong linear developmental trend in normals. Data are discussed in relation to the role of primary neurointegrative disorder in the etiology of schizophrenia in childhood. (39 ref.)—*Journal abstract*.

10393. Wilkie, Charlotte H. (Catholic U. of America) **A study of familial expectations regarding work for the Negro schizophrenic male patient on convalescent leave.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1897.

Schizophrenia Treatment

10394. Caffey, Eugene M., Galbrecht, Charles R., & Klett, C. James. (Veterans Administration Hosp., Perry Point, Md.) **Brief hospitalization and aftercare in the treatment of schizophrenia.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 81-86.—Randomly assigned 201 schizophrenic men to 1 of 3 groups: (a) standard hospital care with discharge at physician's discretion and normal Veterans Administration care; (b) accelerated hospital care for 21 days and treatment by the same staff on an outpatient basis for 1 yr.; and (c) standard hospital treatment followed by the aftercare program given Group b. The brief-treatment group showed as much sustained improvement as those who stayed longer. The longer-stay groups tended to be more symptomatic than the brief-treatment group after 3 wk. but less symptomatic at their discharge. Both intensified aftercare groups manifested less pathological disturbance at 12 mo. The short-stay group did not demonstrate a greater incidence of readmission or a shorter mean time out of the hospital prior to 1st readmission. There was little evidence of the superiority of 1 group over another

with respect to community adjustment. (21 ref.)—*Journal abstract*.

10395. Clancy, Helen & Rendle-Short, John. (U. Queensland, Brisbane, Australia) **Infantile autism: A problem of communication.** *Australian Occupational Therapy Journal*, 1968(Jul), Vol. 15(3), 7-20.—Describes the rationale, aims, and methods of an experimental treatment of infantile autism based on the 7-yr treatment of 11 children. Infantile autism is regarded as a primary disease involving communicative isolation, which causes a secondary level of symptoms. Treatment was aimed at the aspect of isolation. Simple conditioning techniques were used in feeding, toilet training, and social peer and adult interaction programs. Case studies are presented of 3 boys, 4 yr., 5 yr., and 16 mo. old. It is concluded that although this treatment is purely symptomatic, early treatment in the 1st 3 yr. of life forestalls the secondary level of symptoms and greatly modifies the disabilities of autism.—*Journal summary*.

10396. El-Islam, M. Fakhr; Ahmed, Samia A., & Erfan, M. E. (Kasr-El-Aini Hosp., Cairo, Egypt) **The effect of unilateral E.C.T. on schizophrenic delusions and hallucinations.** *British Journal of Psychiatry*, 1970(Oct), Vol. 117(539), 447-448.—Groups of 20 and 21 schizophrenics were treated with unilateral or bilateral electric shock. Differences on memory retest were small and unrelated to outcome of therapy.—R. L. Sulzer.

10397. Ellis, Jean. **The Mildred Creek Centre for the treatment of autistic children.** *Australian Occupational Therapy Journal*, 1969(Oct), Vol. 16(4), 19-25.—Describes a special center for autistic children in Western Australia. The history of the center, building and grounds, and staff composition are outlined. 6 boys and 3 girls, 4.5-10 yr. old, attend the center as outpatients. Admission to the center is based on a 9-point criteria, including impairment of emotional relationships, preoccupation with objects, and abnormalities of mood and behavior. Treatment aims to help the child behave in a socially acceptable manner and to relate to adults and other children. The method of treatment is operant conditioning. Training programs, drugs, records, schedules, and assessment procedures are noted. It is concluded that although critics of operant conditioning therapy maintain that it only produces unimaginative obedience and docility, learning generalization is observed in the center.—S. Knapp.

10398. García del Moral, Juan A. **Psicosis esquizofrénicas agudas tratadas con imagotán.** [Severe schizophrenic psychoses treated with imagotan.] *Actas Luso-Españolas de Neurología y Psiquiatría*, 1969(Oct), Vol. 28(4), 335-338.—Reports the treatment of 62 Ss with imagotan in doses of 100-200 mg/day for 3 mo. General findings were that (a) imagotan is a neuroleptic sedative acting on agitation, autism, thought content, and affectivity; (b) therapeutic action is very rapid, particularly when it is used parenterally; (c) physical improvement occurred with regard to normalization of vital rhythms, sleep, appetite, interests, etc. in the 1st mo. of treatment; (d) the most effective results were noted in severe psychotics; (e) the most notable results for severe schizophrenics were for those manifesting confusion, pseudoneurosis with psychomotor agitation, and hebephrenic catatonia; and (f) dosage in ambulatory treatment was able to be reduced to 50 mg/day with continued improvement.—P. Hertzberg.

10399. Hauck, Louise P. & Martin, Patrick L. (Patton

State Hosp., Calif.) **Music as a reinforcer in patient-controlled duration of time-out.** *Journal of Music Therapy*, 1970(Sum), Vol. 7(2), 43-53.—"Music therapy is the manipulation of music-related activities to induce changes in a client's behavior...." Another of its functions is a reinforcing one—"the ability of music to increase the frequency of behavior upon which the availability of the music is dependent." Therapeutic situations can be arranged so that wanted behavior produces a reinforcing stimulus. This is referred to as positive reinforcement and plays a major role in the application of behavior modification techniques in therapy. Environments can also be programed so that wanted behavior produces a reinforcer while unwanted behavior makes any positive reinforcement unavailable. The latter procedure is termed time-out from positive reinforcement. Time-out is considered a case of punishment because it results in suppression of response. Results from a study of a 59-yr-old female hospitalized schizophrenic treated with music therapy indicate that patient-controlled duration of time-out was of therapeutic benefit. (16 ref.)—*F. O. Triggs*.

10400. May, Philip R. & Tuma, A. Hussain. (U. California, Los Angeles) **Methodological problems in psychotherapy research: Observations on the Karon-VandenBos study of psychotherapy and drugs in schizophrenia.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 569-570.—Argues that the B. P. Karon and G. R. VandenBos (see PA, Vol. 45:1067) experimental design and procedures are not adequate to sustain their contrary conclusion. The general trend of other studies is that psychotherapy for hospitalized schizophrenics is relatively ineffective, while drug therapy enhances results regardless of the therapist's experience.—*R. L. Sulzer*.

10401. Ono, Shigeharu, et al. (Fukushima Medical Coll., Japan) **A terapêutica da esquizofrenia pelo Gabob.** [Treatment of schizophrenia with Gabob.] *O Hospital*, 1968(Nov), Vol. 74(5), 1499-1504.—Treated 23 14-44 yr. old male and female schizophrenics with Gabob, γ -amino- β -hydroxybutyric acid (recommended dosage: 1 mg.) in association with other psychotropes or antidepressants. Results were rapid (4-5 days average): 1 complete and 7 partial remissions (depressive, demential, or other symptoms), 9 discreet improvements, and null or aggravated in 6 cases. While the effectiveness of Gabob is not decisively attributed to the action of Gabob, primarily due to the small number of cases, it is considered to be a useful adjuvant in the treatment of schizophrenia in general.—*H. Singer*.

10402. Prien, Robert F., Levine, Jerome, & Cole, Johnathan O. (Veterans Administration Hosp., Central Neuropsychiatric Lab., Perry Point, Md.) **Indications for high dose chlorpromazine therapy in chronic schizophrenia.** *Diseases of the Nervous System*, 1970(Nov), Vol. 31(11), 739-745.—Describes a multi-hospital collaborative study involving over 800 chronic schizophrenics in which a high dose regimen of chlorpromazine (2000 mg/day) was compared with a low dose regimen (300 mg/day), a placebo, and physician's choice of treatment. Treatment followed a double-blind procedure for 24 wk. Results obtained were: (a) High dose response was related to age, length of current hospitalization, and the type of phenothiazine medication S was receiving just before the study. High dose was significantly more effective than the other treatments with Ss under 40 who had been hospitalized under 15 yr.

and were receiving a nonpiperazine phenothiazine at pretreatment. High dose offered no great advantage over low dose and physician's choice among the other subgroups. (b) High dose was a particularly poor treatment for Ss over 40. These older Ss suffered a high incidence of severe side effects on the 2000-mg dose. (c) Among long-stay Ss, treatment failure on low dose and placebo was related to the dose of phenothiazine medication S was receiving just before the study. The higher the dose of prestudy medication, the greater the incidence of failure. (22 ref.)—*Journal summary*.

10403. Rowitz, Louis. (U. Illinois, Urbana-Champaign) **The effects of institutionalization upon the self identifications of schizophrenic patients.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2518.

10404. Weidner, Fritz. (Temple U.) **In vivo desensitization of a paranoid schizophrenic.** *Journal of Behavior Therapy & Experimental Psychiatry*, 1970(Mar), Vol. 1(1), 79-81.—Applied systematic desensitization and operant conditioning to a 36-yr-old male paranoid schizophrenic inpatient who for 6 yr. believed the Central Intelligence Agency would kill him outside the hospital. After desensitization the patient spent increasing amounts of time outside the hospital where appropriate social behaviors were reinforced.—*Journal abstract*.

PSYCHOSOMATIC DISORDER

10405. Palmer, K. N. & Diamant, M. L. (U. Aberdeen, Scotland) **Effect of salbutamol on spirometry and blood-gas tensions in bronchial asthma.** *British Medical Journal*, 1969(Jan), Vol. 1(5635), 31-32.—Describes a study of 37 patients, admitted to a hospital for an asthma attack with a long history of attacks of acute airway obstruction. Aerosol inhalation of a new bronchodilator drug, salbutamol, was used, and pressures of oxygen and carbon dioxide were measured in duplicate by means of electrodes. Results of spirometric and blood-gas tension measurements were recorded. "Forced expiratory spirometry were obtained before and 5 min. after a control aerosol inhalation of an aerosol containing only the propellant gas, and again 5 min. after the aerosol inhalation of 200 mg. of salbutamol." An improvement in airway obstruction resulted, but no significant intensification of the hypoxemia occurred. It is suggested that because the stimulant effect of salbutamol on the cardiovascular system is minimal, lowering of the oxygen pressure, even though the airway obstruction is greatly reduced, does not occur. Salbutamol is a useful bronchodilator drug and appears to have little or no effect on the cardiovascular system.—*J. Halev*.

10406. Schneemann, N. (8 Volkhartstr., Augsburg, W. Germany) **Ein psychoreaktives Zustandsbild in daseinsanalytischer Interpretation.** [A psychoreactive motor disturbance in the view of existential analytic interpretation.] *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 257-280.—The existential analytic method, together with the results of a classic neuropsychiatric examination and psychoanalytic exploration—though of a fundamentally different type—provided further insight into the meaning and background of a psychoreactive motor disturbance. The motor anomaly was interpreted both as a way of life and as an embodiment in its genesis. After phenomenological elucidation of the anxiety

structure of the S, it is proved that the extraordinary and strange manner of movement resulted from false ways of communication with the world of others. The latter were experienced no longer as existential beings but as categories, and therefore were manipulated, their existence as fellow beings partly denied and regarded as mere material elements.—*English summary.*

10407. van Loggen, M. (59 Nieuwe Keizersgracht, Amsterdam, Netherlands) **Introspective excursion of a hypertensive patient.** *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 201-206.—Describes the introspective observations of a patient who is a psychoanalytically trained psychologist. Several symptoms are described and an attempt is made to ascertain whether these symptoms might be considered a symbolic representation of inner tensions: the outcome of a struggle between primary assertiveness and the exigencies of society. The assertiveness cannot be integrated into harmless activities, and causes a disregulation of psychic activities, the outcome of which may be a state of psychical tension, finding expression in essential hypertension. This can be described as the symbolic expression of the tensions in a community in which aggressive competition has become the basis of social behavior. A special clinical treatment, involving several forms of therapy, physical, psychological, and social, which might prevent the fixation of the symptoms and could help the patient to overcome his conditioned behavior in favor of healthier outlets for his tensions is suggested.—*Journal summary.*

CASE HISTORY

10408. Hsu, Lillian Y., Strauss, Lotte, & Hirschhorn, Kurt. (City U. New York, Mt. Sinai Medical School) **Chromosome abnormality in offspring of LSD user: D trisomy with D/D translocation.** *JAMA: Journal of the American Medical Association*, 1970(Feb), Vol. 211(6), 987-990.—Congenital abnormalities compatible with D₁-trisomy occurred in a newborn girl whose parents had used LSD prior to conception, but not during the pregnancy. Chromosomal analysis of the infant revealed trisomy 13 with a D/D translocation. LSD may have damaged maternal germ cells prior to fertilization, inducing chromosomal rearrangement. Fertilization of a gamete with unbalanced chromosome complement may be the direct cause of the chromosomal aberration in the offspring. (17 ref.)—*Journal abstract.*

10409. Levy, Raymond & Behrman, Joan. (Middlesex Hosp., Medical School, London, England) **Cortical evoked responses in hysterical hemianaesthesia.** *Electroencephalography & Clinical Neurophysiology*, 1970(Oct), Vol. 29(4), 400-402.—Recorded somatosensory cortical evoked potentials (AERs) from a 43-yr-old woman with hysterical anesthesia of the right arm. Stimuli of different intensities were applied at the wrist to the ulnar nerve and skin. The right and left sides were both stimulated in this way and the AER was recorded contralateral to the stimulus. When stimuli were applied to the nerve on the affected side, the AER was reduced at low intensities, but at higher intensities the AERs from the 2 sides were equal. On stimulating skin the AERs from the affected side were smaller in amplitude regardless of the level of stimulation. Possible physiological mechanisms underlying hysterical anesthesia are suggested. (French summary)—*Journal summary.*

10410. Prabhakaran, N., Murthy, G. K., & Mallya, U.

L. (Jawaharlal Inst. of Postgraduate Medical Education & Research, Pondicherry, India) **A case of Kleine-Levin syndrome in India.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 517-519.—Reviews the development of the Kleine-Levin syndrome as a new nosological entity. The clinical picture and course of the illness are discussed and the 1st case from India is reported. A case study of a 26-yr-old male patient is discussed in relation to other patients already reported and it is suggested that his symptoms indicate that the syndrome is a manifestation of hypothalamic dysfunction.—*Journal summary.*

10411. Rickles, Nathan K. (Cedars-Sinai Medical Center, Los Angeles, Calif.) **The angry woman syndrome.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 91-94.—Specific common denominators in the angry woman syndrome set it apart from any established present-day classification. These symptoms are periodic outbursts of unprovoked anger, marital maladjustment, serious suicide attempts, proneness to abuse of alcohol and drugs, a morbidly oriented critical attitude to people, and a contrary obsessive need to excel in all endeavors, with an intense need for neatness and punctuality. This constant striving for perfection is their undoing. 3 cases are presented along with the corollary syndrome of their suffering male counterparts who react to the anger by an intensification of their weak masculine drives. Treatment is at best palliative and is usually resisted.—*Journal abstract.*

MENTAL HEALTH & REHABILITATION

10412. Beier, Ernst G., Robinson, Peter, & Micheletti, Gino. (U. Utah) **Susanville: A community helps itself in mobilization of community resources for self-help in mental health.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 142-150.—Trained 18 adults to work with 7 families selected for having problem children in schools or being under stress, and 14 high school students to work with 4 boys with academic or behavioral problems in school. The trainees were selected for being good listeners, for not being opinionated, and for showing empathy. Training consisted of 70 hr. of role play and supervised practicum work (7 wk.) and was based on a communication model, under the assumption that all members of a family contribute toward the problems. Trainees learned to interrupt the reinforcement pattern which maintained a family's problems. Evaluation of project and community-wide measures applicable for future efforts are discussed.—*Journal abstract.*

10418. Cook, P. S. (Royal Alexandra Hosp. for Children, Camperdown, New South Wales, Australia) **Antenatal education for parenthood, as an aspect of preventive psychiatry: Some suggestions for programme content and objectives.** *Medical Journal of Australia*, 1970(Mar), Vol. 1(13), 676-681.—Disturbances of the parent-child relationship may develop at any stage from birth onwards. The emotional conflicts arising out of these disturbed relationships lead to much emotional ill health, which manifests itself in many ways. Some form of educational preparation for parenthood during the antenatal (and perhaps postnatal) period is a logical opportunity for primary prevention, and this can be combined with orthodox courses of preparation for delivery. A suitable program is suggested to help many parents to establish more mutually satisfactory family relationships, with a lower incidence of emotional disturbance in their children. To expect any measure of success, however, a program would need to cover those areas in which clinical experience has shown that difficulties are likely to arise, and these may vary from 1 culture to another. A consensus of the child psychiatric opinion about an outline of the understandings which would be desirable for average young partners to possess as they embark on parenthood is given.—*Journal abstract*.

10419. Galvin, Donald E. (U. Michigan) **An exploratory study of disabled disadvantaged clients utilizing systems analysis as a vocational rehabilitation planning model.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2103-2104.

10420. Kunce, Joseph T. (U. Missouri, Regional Rehabilitation Research Inst.) **Is work therapy really therapeutic?** *Rehabilitation Literature*, 1970(Oct), Vol. 31(10), 297-299, 320.—A review of the literature suggests that the limitations as well as the benefits of work therapy for psychiatric patients should be taken into account. The greatest benefits appear to occur among the more seriously mentally ill. Among those with less chronic or serious disabilities, work therapy may actually "get in the way" by fostering institutional dependency.—S. L. Warren.

10421. Lamb, H. Richard & Goertzel, Victor. (San Mateo County Psychiatric Rehabilitation Service, Calif.) **Discharged mental patients: Are they really in the community?** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 29-34.—Measured the effect of high- and

low-expectation environments on discharged long-term mental patients randomly assigned to 1 of 2 community settings. The high-expectation setting included a halfway house, a day-treatment center, and a rehabilitation workshop, which demanded mobility, planning, and accepting responsibility. Low-expectation patients went to boarding homes where docility was valued and little initiative expected. The boarding-home group was like a small ward moved to a community setting. The high-expectation group had a higher rehospitalization rate, but a longer time out of the hospital with a higher level of instrumental performance. The high-expectation group was less segregated, less likely to be labeled as deviate, and less stigmatized.—*Journal abstract*.

10422. Lewis, Wilbert W. (National Inst. of Mental Health, Chevy Chase, Md.) **Child advocacy and ecological planning.** *Mental Hygiene*, 1970(Oct), Vol. 54(4), 475-483.—Discusses the nationwide child advocacy system recommended by the Joint Commission on Mental Health of Children. Since this program can not be immediately implemented, it is suggested that small demonstration programs be started to develop the conceptual framework, role models, and administrative structures necessary to guarantee whatever services are needed to allow all children in a neighborhood to experience normal, healthy development. An outline of the way a program of child advocacy might be developed in a public elementary school is included. The specific plan proposed utilizes 3 sequential stages: (a) crisis intervention, (b) outreach into the community, and (c) full child advocacy.—*Journal abstract*.

10423. Mueller, Alice W. (Ft. Logan Mental Health Center, Denver, Colo.) **Family care and post-discharge community adjustment.** *Journal of the Fort Logan Mental Health Center*, 1968(Fal), Vol. 5(2), 85-99.—Studied the influence of family care upon the patient's adjustment in the community after discharge. Data from hospital records, personal interviews, and questionnaires for relatives when patients were not available, were compiled for 141 patients who had been placed in family care and discharged. 41 Ss had been rehospitalized and were not interviewed. Questionnaires were completed for 21 of 24 Ss not interviewed and not rehospitalized. Of the 38 Ss considered employable, 24 were unemployed, including those with more than high school education, those who were unskilled, and those who had been diagnosed as schizophrenic. A majority of Ss reported satisfactory family relations, few community activities, and positive feelings toward their family care experiences. Only 17 of the 33 interviewed Ss reported improvement and only 11 of the 21 not interviewed were reported to be adjusting satisfactorily. Changes in the program, especially in the areas of job training, preparation for family care, and the goals for family care, are suggested.—S. Knapp.

(Los Angeles Psychiatric Service, Calif.) **Crisis intervention from the viewpoint of the mental health professional.** *Pastoral Psychology*, 1970(Apr), Vol. 21(203), 21-28.—Describes the concepts and techniques of crisis intervention developed at the Benjamin Rush Centers for Problems of Living in West Los Angeles and in the Venice section of Los Angeles.—O. Strunk.

10436. Lytton, Hugh. (U. Exeter, Inst. of Education, England) **Counselling and psychology in Britain.** *Bulletin of the British Psychological Society*, 1969(Oct), Vol. 22(77), 273-279.—Counseling, seen as a relative newcomer in Britain, will probably spread and increase in importance. While many counselors are not psychologists, psychologists are urged to take cognizance of the counseling field. The different kinds of counselors are discussed as well as the relation of counseling to psychology.—V. S. Sexton.

10437. McHolland, James D. (Garrett Theological Seminary, Evanston, Ill.) **Establishing the contract in pastoral counseling.** *Journal of Pastoral Care*, 1969(Mar), Vol. 23(1), 36-39.—Establishing a verbal contract in the pastoral counseling relationship enables the counselor to know "why he is present, what he intends to do and not do and what he expects of the counselee." The counselee also learns what the minister can offer through counseling, and both can agree on the nature of the relationship, which either is free to discontinue. This also frees the counselor from any obligation to comply with services not in the contract. The question of remuneration must be considered as to whether the counselor needs payment and whether the counselee feels a need to pay. The contract is formulated during a trial time period, and it is concluded that changing the contract once it has been established may destroy it.—M. West.

10438. Morley, Wilbur E. (Los Angeles Psychiatric Service, Calif.) **Theory of crisis intervention.** *Pastoral Psychology*, 1970(Apr), Vol. 21(203), 14-20.—Crisis intervention treatment modalities offer approaches which are readily taught and are maximally effective in bringing about change in individuals in crisis. 3 levels of crisis intervention are environmental manipulation, general support, and generic approach—all deserving the

close attention of the counseling pastor.—*O. Strunk.*

10440. Pierce, Richard M., Schauble, Paul G., & Farkas, Andrea. (Michigan State U.) **Teaching internalization behavior to clients.** *Psychotherapy: Theory, Research & Practice*, 1970(Win), Vol. 7(4), 217-220.
 —Examined (a) the possibility of teaching internalizing behavior to clients to accelerate progress in therapy, and (b) a means of predicting internalizing behavior. The Rotter Internalization-Externalization (I-E) Scale, the Learning Strategies Questionnaire (LSQ), assessment of in therapy I-E behavior by 3 raters, and therapist rating of I-E behavior were used. 7 female and 8 male undergraduates who sought help at the university counseling center agreed to participate and completed the I-E scale and the LSQ. In sessions with the S, the 1st 20 min. were run in the traditional manner, in the 2nd 20 min. the therapist made the S aware when he was internalizing or externalizing, reinforcing the former, and the final 20 min. were again traditional. Excerpts from the 1st and last 20 min. were presented to the raters for evaluation. It was found that those Ss who had a lower level of internalizing improved the most, but were still below those who were at initially higher levels. Results indicate that the direct teaching of internalizing may be useful in certain cases to promote progress. The LSQ was found to be correlated significantly with the I-E scale ($p < .02$).—*S. Knapp.*

10452. Milligan, H. C. (Health & Welfare Dept., Hartlepool, England) **Organizational change in relation to speech therapy services.** *British Journal of Disorders of Communication*, 1969(Oct), Vol. 4(2), 203-207.—Describes social work in England as a divided profession in great need of unification under a separate social work department, and aimed at fostering social and individual responsibility through the use of a highly professionalized service which is family oriented. Such a change would call for an increased number of administrative posts and would establish closer links between the hospital speech therapy services and other services, particularly education and social work.—*S. Knapp.*

PHYSICAL HANDICAP

10453. Bolton, Denyse. (Princess Alexandra Hosp., Brisbane, Queensland, Australia) **Hemiplegia with perceptual difficulties.** *Australian Occupational Therapy Journal*, 1969(Jul), Vol. 16(3), 12-15.—Presents a case history of a male 75-yr-old left hemiplegia patient with

perceptual difficulties, and outlines the perceptual testing and occupational therapy.

10454. Coven, Arnold B. (U. Arizona) **The effects of counseling and verbal reinforcement on the internal-external control of the disabled.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1006.

10455. Craft, Michael. **The multiply handicapped child.** *British Journal of Disorders of Communication*, 1968(Oct), Vol. 3(2), 182-188.—Discusses the care of multiply-handicapped children regarding prevention, early identification, comprehensive assessment and accurate diagnosis, organization of treatment, support for the family, education, employment, and after school care. It is stressed that when planning educational and medical resources for any handicap, clinical considerations must include children with MA above 5 on attainment tests, children able to reach but below an MA of 5, those not able to reach an MA of 5, and severely subnormal children. An experimental educational-hospital school designed to treat educationally subnormal children with additional handicaps causing defective speech is described, and results of treatment are discussed. Various problems and criticisms of this facility are summarized. (23 ref.)—*M. Maney*.

10456. Gómez-Ferrer Górriz, C. **Baremos de un "test" de psicomotricidad infantil obtenidos en población española.** [Indicators of a "test" of psychomotricity in children obtained in a Spanish population.] *Revista Española de Oto-Neuro Oftalmología y Neurocirugía*, 1969-1970(Jan), Vol. 28(161), 47-53.—Tested 221 4-7 yr. old normal children and 55 5-7 yr. old deaf mutes with an imitation of gesture test modeled after the Bergès and Lézine test. Ss imitated (a) simple arm movements, (b) simple hand movements, and (c) complex hand movements. Means for the normal responses were calculated according to CA, as were superior and inferior performances. The test was considered valuable as a diagnostic procedure in the global development of a child.—*P. Hertzberg*.

10457. Guest, Janet. **A communication device for the severely handicapped.** *Australian Occupational Therapy Journal*, 1969(Apr), Vol. 16(2), 8-11.—Describes a simple, inexpensive apparatus which enables the severely handicapped to communicate without outside aid or interpretation.

10459. Walls, Richard T. & Miller, John J. (West Virginia U.) **Perception of disability by welfare and rehabilitation clients.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 793-794.—Examined the differences between 11 welfare and 14 rehabilitation clients in their perception of the debilitating effects of various disabilities. Ss were individually administered Rotter's Internal-External Locus of Control Scale and the Perception of Disability Scale. It was found that salient commonalities exist between the 2 groups that may have implications for intervention strategies used by agencies working with either or both types of clients.—*Journal abstract*.

10460. Willems, Edwin P. & Vineberg, Shalom E. (U. Houston) **Direct observation of patients: The interface of environment and behavior.** *Psychological Aspects of Disability*, 1969(Nov), Vol. 16(3), 74-88.—Presents 1 phase of an ongoing program of research on

the ecology of human behavior. The primary S group consists of 12 adults with severe, chronic physical disabilities being treated in a comprehensive treatment facility. Focus is on the actual interface between the treatment environment and the behavior and experience of patients. Direct observation was made of Ss and a continuous descriptive protocol was generated. 3 Os were assigned for 1 full day of continuous observation for each S. Protocols may be analyzed for behavioral repertoires, interaction with hospital staff, varying stimulation in the experiences of Ss, differences in behavior between early and predischARGE Ss, and types of behavior characteristics of differing areas of the hospital.—*Journal abstract*.

Blindness & Visual Disorder

10465. Rieger, H., Lesèvre, N., Rémond, A., & Lairy, G. C. (EEG & Applied Neurophysiology Lab., Paris, France) **Réponses évoquées visuelles chez les enfants voyants et mal-voyants.** [Visual evoked responses in children with normal and with poor vision.] *Electroencephalography & Clinical Neurophysiology*, 1970(May), Vol. 28(5), 437-448.—Tested 31 7-12 yr. old children with intermittent photic stimulation at 768 msec. and 83 msec. between flashes, with eyes opened and closed. 22 Ss had normal vision, and 9 showed considerable bilateral visual defect of peripheral origin, with vision in the better eye less than 3/10. Responses to 200 or 100 flashes were recorded from a posterior median longitudinal and a right-left transverse montage, each consisting of 9 equidistant electrodes. Ss with poor vision are characterized by (a) a much weaker energy either of overall response, or of the afterdischarge separated by mathematical filtering; (b) a much smaller amplitude of the positive wave; (c) a more anterior topography (parietal instead of occipital) of this positive

wave; (d) increased latency of the negative wave; and (e) very small differences in amplitude as a result of opening and closing eyes. In Ss with poor vision the amplitude of the response is least when the visual acuity remaining is the smallest. Interpretation of the peculiarities of responses evoked in Ss with poor vision is discussed in relation to a specific visual mechanism, underlying background activity, and synchronizing mechanisms. (23 ref.)—*English summary*.

10466. Warren, David H. & Pick, Herbert L. (U. California, Riverside) **Intermodality relations in localization in blind and sighted people.** *Perception & Psychophysics*, 1970(Dec), Vol. 8(6), 430-432.—Gathered developmental data on the relative importance of vision, audition, and proprioception in determining spatial direction in a conflict situation. 72 Ss were divided into equal groups at each of 3 age levels, 2nd and 6th grade, and undergraduates. Age trends did not support the hypothesis that information from different modalities becomes better differentiated with age. In a follow-up study, 116 blind children, divided into 3 age groups roughly equivalent to those of the sighted Ss, were tested under auditory-proprioceptive conflict conditions. No age changes were found. A 3rd study with Ss either blind or visually handicapped from birth is also described. The possibility of a visual involvement in auditory and proprioceptive localization is discussed.—*Journal abstract*.

10470. Erber, Norman P. (Washington U.) **Auditory and audio-visual reception of words in noise by observers with normal and impaired hearing.** *Dis-*

sertation Abstracts International, 1970(Oct), Vol. 31(4-A), 1648-1649.

10471. Marshall, William A. (U. Washington) **Contextual constraint on deaf and hearing children: Investigating the effect at fourth grade level using the Cloze Procedure.** *American Annals of the Deaf*, 1970(Nov), Vol. 115(7), 682-689.—Used the Cloze Procedure as the linguistic measuring instrument to study the effect of context on the deaf child's ability in making correct predictions to selectively mutilated written materials. 3 distinct levels of contextual constraint were generated from a single 3rd grade reading passage. Ss were 9 male and 15 female prelingually deaf children with 4th grade reading ability, and an equal number of sex-matched 4th graders. Results indicate that as the amount of context became more constrictive, the mean proportions of correct insertions became greater for all Ss. The relative redundancy of the linguistic cues, therefore, substantially affected those areas of grammatical competence as assessed by Cloze scores. (17 ref.)—*Journal summary*.

10472. Stewart, Larry G. (U. Arizona) **Perceptions of selected variables of the counseling relationship in group counseling with deaf college students.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1026.

SPEECH DISORDER

10473. Bickel, J. (U. Pisa, Inst. of Clinical Psychiatry, Italy) **Terapia delle logopatie dell'età evolutiva.** [Speech therapy for children.] *Rivista di Neurobiologia*, 1970(Apr), Vol. 16(2), 139-152.—Defines speech disorder as language which is pathologically altered when it deviates from the norm by attracting attention and by interfering with the possibility to communicate or to adapt socially. Speech therapy must help these to express themselves, to communicate, and to adapt in society. The object of speech therapy is "not the speech disorders but the Ss who bear the disorders." 3 types of speech disorders are studied along with the possible causes and the type of speech therapy most beneficial. Delayed language could be caused by (a) a hearing defect, where electroacoustical stimulation could be helpful; (b) mental retardation, where it is necessary to activate the instrumental function of language, e.g., self-talk, parallel-talk; (c) emotional disturbances, where psychotherapy is beneficial; and (d) cerebral lesion, where stimulations which tend to distract and disorient the child must be eliminated. Articulation disorders and stuttering are studied in the same manner. The importance of an individual approach and diagnostic therapy is emphasized, because there is no 1 answer to any speech disorder. (English summary) (21 ref.)—*A. M. Farfaglia*.

10474. Byers-Brown, Betty & Ives, Lawrence. (U. Manchester, England) **The re-education of a dysphasic adult: An experiment in co-operation between a speech therapist and an educational psychologist.** *British Journal of Disorders of Communication*, 1969(Oct), Vol. 4(2), 176-196.—Describes an on-going joint program between a speech therapist and an educational psychologist in diagnosing and re-educating an adult male with severe receptive dysphasia. The speech therapist worked on the area of verbal language considered essential for social rehabilitation. The educational psychologist attempted to illustrate the clinical diagnostic employment of a range of general

psychometric and attainment tests, and developmental verbal reasoning items. Information gained was related to the formulation of a reading program. (36 ref.)—*Journal summary.*

10476. Ierodiakonou, C. S. (U. Thessaloniki, Child Guidance Clinic, Greece) **Psychological problems and precipitating factors in the stuttering of children.** *Acta Paedopsychiatrica*, 1970, Vol. 37(6), 166-174.—65 3-15 yr. old stuttering Ss were studied with respect to age of onset, psychological development, severity of stuttering, and accompanying psychosomatic and behavior disorders. Eating problems were a prominent symptom. Familial incidence, left-handedness, and the precipitating influence of terror inducing psychological trauma were causative factors. Parental attitudes correlate with severity and aggravation, and, because of anxiety, contribute to its permanence. The prestuttering personality was found to be insecure and sensitive to criticism. (16 ref.)—*G. Rubin-Rabson.*

10477. Ringel, Robert L., Burk, Kenneth W., & Scott, Cheryl M. (Purdue U.) **Tactile perception: Form discrimination in the mouth.** *British Journal of Disorders of Communication*, 1968(Oct), Vol. 3(2), 150-155.—20 undergraduates with no speech defects, 12 with mild articulation deficits, and 15 with moderate deficits, each evaluated orally 65 stimulus form pairs drawn from the pool of plastic geometric forms developed at the National Institute of Dental Research. Findings indicate that normal Ss made significantly fewer errors than defective Ss, and the 2 subgroups of defective Ss differed significantly in their average performance with the mildly defective Ss making more mistakes. Application of a t test for correlated data shows that the difference in the average number of between- and within-class stimulus pair errors was statistically significant for both normal and defective Ss and that defective Ss' errors were distributed in a manner significantly different from that of normals. It is concluded that results support the often hypothesized relation between oral sensory system functioning and articulation skill.—*M. Maney.*

10478. Schuell, Hildred & Nagae, Kazuhisa. (U. Minnesota, Medical School) **Aphasia studies.** *Geriatrics*, 1969(Oct), Vol. 24(10), 141-152.—Examined aphasic and aphasoid syndromes as part of a study of cerebrovascular disease in Japan and the United States. During the acute period of illness following an occlusive cerebral lesion and again 8 mo. later, 146 Minnesota and 121 Japanese patients were examined with the Minnesota Test for Differential Diagnosis of Aphasia. Both groups of aphasic Ss showed definite similarities of errors on the test, however, Japanese Ss suffered milder impairment, lower mortality rate, and showed more improvement from test to retest than the Minnesota Ss. It is suggested that this may be due to a tendency for the Japanese Ss to present more anterior than posterior lesions.—*S. Knapp.*

10479. Stewart, A. (Manchester U., England) **Disorders of articulation in children.** *British Journal of Disorders of Communication*, 1968(Oct), Vol. 3(2), 121-129.—Defines disorders of articulation in children, and estimates their incidence among the total speech defective population. Research into the etiology of these problems is reviewed, and possible reasons for the inconclusive findings suggested. It is concluded that the whole group must include several kinds of problems. The

importance of distinguishing between subgroups in research is qualified by reference to investigations carried out in the last few yr., where experimental design has been more thorough. Several such investigations have suggested the involvement of wider problems of linguistic functioning in some of these children. The importance of these developments and the need for more research into this aspect of these problems is emphasized. (23 ref.)—*Journal summary.*

NEUROLOGICAL DISORDER

10480. ———. **L-dopa: I.** *British Medical Journal*, 1970(Nov), Vol. 4(5733), 478-479.—Summarizes "the pharmacological background and present therapeutic status of L-dopa in Parkinsonism." In Parkinson's disease the normal balance between acetylcholine and dopamine is upset as a result of deficiency of dopamine. Deficiency is corrected by administering L-dopa. It is estimated that 30% of an average population of parkinsonian patients revealed partial improvement. Clinical features that improve most are hypokinesia and rigidity. The maximum effective dose of 8-10 gm/day must be achieved gradually under the supervision of a physician.—*I. Halev.*

10481. ———. **Parkinsonism.** *Medical Journal of Australia*, 1970(Apr), Vol. 1(15), 742-743.—Briefly discusses the use of anticholinergic or dopaminergic drugs for the successful control of Parkinson's disease. It is suggested that the combined use of drug therapy and stereotactic surgery should be capable of relieving the principle features of tremor, rigidity, and akinesia.—*M. West.*

10482. ———. **Psychiatric aspects of multiple sclerosis.** *British Medical Journal*, 1969(Oct), Vol. 4(5675), 62-63.—Describes a study conducted on 108 patients in the department of neurology at Oxford to determine the degree of organic psychological dilapidation as a limiting factor in rehabilitation. The control group consisted of 39 patients suffering from muscular dystrophy which does not affect the CNS. Tests included the WAIS, the Babcock sentences, etc. Results strongly confirm the Continental view of intellectual deterioration. $\frac{2}{3}$ of the Ss showed the chronic amnesic syndrome. None of the controls showed evidence of dementia. $\frac{1}{4}$ of the Ss showed depressive features which were due to their disability as seen by the S. Established cases of multiple sclerosis thus frequently show evidence of organic dementia.—*I. Halev.*

10483. Bekhtereva, N. P., Kambarova, D. K., & Matveev, Yu. K. (Inst. of Experimental Medicine, Leningrad, USSR) **Funktsional'naya kharakteristika zven'ev mozgovykh sistem kontrolya psikhicheskikh i dvigatel'nykh funktsii u cheloveka.** [Functional characteristics of the links in the cerebral systems for regulation of mental and motor functions in man.] *Fiziologicheskii Zhurnal SSSR*, 1970(Aug), Vol. 56(8), 1081-1097.—6 patients suffering from parkinsonism and therapeutically equipped with implanted electrodes were Ss in a 4-6 mo. study of the dynamics of the impulse activity of neuronal populations in various deep structures of the brain during motor (active movement of limbs) and psychological (Binet) tests, presented under ordinary conditions and after administration of neurotropic agents: 200-600 mg. of L-dopa (a precursor of dopamine), and .5-1.5 mg. of dezeril (1-methyl-D-

butanolamide of lysergic acid)—the strongest and most specific of known serotonin antagonists. In different nuclear structures, zones were disclosed in which characteristic reproducible dynamics of impulse activity emerged during the performance of psychological and/or motor tests. Characteristic reproducible transformations of impulse activity could arise in motor tests in different nuclei and in different zones of 1 nucleus in response to movement of only the contralateral limb or to movements of the limbs on both sides of the body. The administration of L-dopa and dezeril produced a change in the spontaneous frequency of impulsation, and the character of its dynamics during motor and psychological tests (presence of impulse activity which was absent before administration and vice versa). (English summary)—*J. D. London.*

10484. **Boll, Thomas J. & Reitan, Ralph M.** (U. Washington) **Psychological test results of subjects with known cerebral lesions and Parkinson's disease as compared to controls.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 824.—Investigated the role of factors other than motor disability and emotional lethargy in patients with Parkinson's disease. The ranking effectiveness of 29 tests of proven value in discriminating brain-damaged from normal Ss was compared with the ranking of these tests' ability to discriminate parkinsonian from normal Ss. The Spearman rank-difference correlation coefficient was .547 ($p < .01$) which suggests the same tests discriminate brain-damaged and parkinsonian Ss from controls. —*Author abstract.*

10485. **Gomez, Manuel R.** (Mayo Clinic, Section of Pediatric Neurology, Rochester, Minn.) **Neurologic approach to specific language disability.** *Bulletin of the Orion Society*, 1970, Vol. 20, 17-29.—Discusses the elements of (a) spoken language, (b) written language, and (c) "cerebral dominance" in relation to language disability. The neurological functioning of acquisition of spoken language is outlined. Lesions in the anterior section of the left cerebral hemisphere have appeared to lead to a breakdown or failure in proper development of speech and language. Acquisition of written language is outlined as cerebral discrimination of symbols. Disabilities, e.g., alexia (word-blindness), aphasia (inability to write), and dyslexia are discussed. Directionality, numerality, and ordinality are enumerated as clues in visual decoding. A review of the relationship between language disorders and hand dominance was included. It is concluded that written and/or spoken language disorders stem from cerebral failure of the "decoding or encoding" process.—*C. O'Donnell.*

10486. **Herron, Carole J.** **Some effects of instrumental music training on cerebral palsied children.** *Journal of Music Therapy*, 1970(Sum), Vol. 7(2), 55-58.—"Cerebral palsied children have a need to extend the muscles and to use the extremities that need improved muscular coordination. Coordination can be improved by the increase of voluntary control and the inducement of relaxation." An attempt was made "to examine the possibility of improving the muscular coordination of cerebral palsied children by teaching them to play the Hohner melodica, a wind instrument having a piano-like keyboard. Of specific concern were the effects of this activity on physical coordination, particularly (a) of the hands and fingers, (b) breath support in sustaining a musical tone, and (c) coordination of blowing into the mouthpiece while fin-

gering the keys. The other area of concern was musical performance and achievement as measured by the Belwin Singing Achievement Test (Pilot Edition), also known as the 'Play or Sing' test. . . . Ss were 3 males and 1 female, 9-11 yr. of age. Improvement in muscular coordination was attained by all Ss; the continual use of the hands and fingers when performing on the melodica appeared to benefit them in this area. Ss were required to provide a continuous air stream for tone production; this appears to have improved their breath support. Poor musical performance achievement by 3 Ss was probably due to the severe muscular dysfunction of 1, the mental retardation of another, and the combination of both of these factors in the 3rd. The 4th S achieved a final performance test which was about 22% higher than the 1st test score.—*F. O. Triggs.*

10487. **Klas, Leroy D.** (U. Utah) **A study of the relationship between depression and factors in the rehabilitation process of the hospitalized spinal-cord injured patient.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2184-2185.

10488. **Lencione, Ruth M.** (Syracuse U.) **A rationale for speech and language evaluation in cerebral palsy.** *British Journal of Disorders of Communication*, 1968(Oct), Vol. 3(2), 161-170.—Argues that the major objective of evaluation is to obtain as accurate a picture as possible of a child's abilities and disabilities, regardless of the type of handicap, in order to design a program of therapy which will meet each child's special needs. In the case of the child with cerebral palsy, who may fall heir to a multiplicity of problems, in varying degrees of severity, evaluation and diagnosis of achievement levels, as well as failure points, is a complex task requiring broad objectives. It is concluded that clinically, an understanding of the child's developmental growth and the stages of linguistic development that he has achieved, as well as those stages that have been omitted, provides, at this juncture in our knowledge of the impact of cerebral palsy on speech and language, 1 way of efficiently assessing the problem. (24 ref.)—*Journal summary.*

10489. **Moiseeva, N. I., Kambarova, D. K., Orlov, V. A., & Savchenko, Yu. N.** (Inst. of Experimental Medicine, Leningrad, USSR) **Ob otsenke fonovoi bioelektricheskoi aktivnosti i reaktsii golovnogo mozga cheloveka.** [On estimating spontaneous bioelectrical activity and reactions in the human brain.] *Fiziologicheskii Zhurnal SSSR*, 1970(Aug), Vol. 56(8), 1098-1103.—70 normals, 74 epileptics, and 30 paroxysmal nonepileptics were used to study the possibility of an objective evaluation of spontaneous activity and reactions in the EEG through the parameters associated with 2 indices: general activity rate and pattern of interrelationships between rhythms—the so-called "specialist plus computer" approach to the semiautomatic processing of biopotential data. 7 forms of oscillations for the description of the EEG were elaborated prior and subsequent to the administration of the following therapeutic neurotropic agents: dezeril, aminazine (chlorpromazine), and iprazid. Utilization of the general activity rate made possible the disclosure of a connection between the character of EEG changes (in particular, a marked increase in α -activity) and the positive clinical effect observed as a result of pharmacological treatment. Dezeril, which acts only upon the serotonergic structures, did not alter the usual interrelationships obtaining between rhythms. Administration of the adrenalytic, aminazine (acting, as it does, upon the

adrenergic system), brought about the disappearance of several "positive connections" between rhythms, while the administration of iprazid, an activator of central adrenergic systems, caused the disappearance of several "negative connections." (English summary)—*I. D. London.*

10490. Nelson, K. B. & Deutschberger, J. (Children's Hosp., Washington, D.C.) **Head size at one year as a predictor of four-year IQ.** *Developmental Medicine & Child Neurology*, 1970(Aug), Vol. 12(4), 487-495.—From a study of 9379 children in the Collaborative Project on Cerebral Palsy, it was found that head circumference and body length at 1 yr. varied directly with IQ at 4 yr. Several caveats are added. (18 ref.)—*P. W. Pruyser.*

10491. O'Brien, Charles P., DiGiacomo, Joseph N., Fahn, Stanley, & Schwarz, Gabriel A. (U. Pennsylvania, Medical School) **Mental effects of high-dosage levodopa.** *Archives of General Psychiatry*, 1971(Jan), Vol. 24(1), 61-64.—Of 200 patients receiving levodopa (L-DOPA) therapy, the 1st 20 Ss received 4-6.5 gm. of L-DOPA/day. 7 of 12 parkinsonian Ss who were also depressed showed a remission of depression during L-DOPA treatment. However, this change generally correlated with the degree of motor improvement. In 2 Ss the mood elevation was clearly out of proportion to the motor improvement, and 1 of these developed a hypomanic-like state. A 3rd S developed agitated behavior after 1 yr. of L-DOPA therapy. 6 of 9 males reported spontaneous penile erections and 1 resumed successful intercourse after 3 years of impotency. Of 4 Ss with organic dementia, 3 showed no detectable improvement but 1 raised his Wechsler Memory Quotient from 59-86.—*Journgl abstract.*

10492. Pilleri, G. **Über angeborene Verhaltensmuster und deren phylogenetische Wurzeln bei Cortex-atrophien.** [Congenital behavior patterns and their phylogenetical roots in cortical atrophies.] *Psychiatria Clinica*, 1969, Vol. 2(5), 268-278.—A few phenomena due to disinhibition (staring, pursing of lips, finger sucking, and hoarding tendencies) which appear with progressive cerebral lesions are discussed from a clinical, neuropathological, and ethological viewpoint. The phenomena represent hereditary complexes, which correspond formally to the physiological movement repertory of the newborn or the infant, and which can be seen as homologous to movement patterns in mammals.—*English summary.*

10493. Raeva, S. N. (Inst. of Biophysics, Pushchino-Oka, USSR) **Issledovanie neironnoi aktivnosti golovnogo mozga cheloveka.** [Study of neuronal activity in the human brain.] *Fiziologicheskii Zhurnal SSSR*, 1970(Aug), Vol. 56(8), 1104-1110.—Reports results of microelectrode studies conducted in the course of 10 stereotaxic operations on patients in the III-IV stage of parkinsonism, primarily of the tremor-rigid form, with extracellular recordings made of 303 active neurons in various subcortical structures. The microelectrode technique makes possible (a) the definition of the boundaries of the conductive and nuclear structures with allowance for individual variability, and (b) the differentiation of the different zones within the thalamus and other subcortical formations. In several zones of the thalamus, cells were found with rhythmic spike activity correlating with the rhythm of the parkinsonian tremor. Several of these cells revealed a close connection with the voluntary motor act. In other thalamic cells no correlation with the parkinsonian

tremor was found. Several of these cells responded with a reaction of inhibitory character to voluntary hand movement and voluntary opening and closing of the eyes. (English summary)—*I. D. London.*

10494. Rossi, Romolo & Conforto, Carmelo. III **Convegno sul tema: "L'impotenza sessuale": Problemi psicoterapeutici nell'impotenza sessuale organica.** [3rd annual convention on the subject: "Sexual impotence": Psychotherapeutic problems in organic sexual impotence.] *Rivista di Psichiatria*, 1969(Jul), Vol. 4(4), 326-329.—Studied psychological problems in paraplegics of medullary trauma where sexual impotence is almost always present. Psychological problems in paraplegics are minimized next to the serious organic lesions even when the psychic aspect is what causes the S to suffer the most. There are 2 problems which confront the paraplegic: 1 is individual and psychological concerning the balance between emotional needs and the somatic reality; the other is socioenvironmental, involving his relationship with his partner. The following mechanisms are used by the S to defend himself from severe emotional confusion: (a) a passive-dependent attitude; (b) a victim-type attitude with masochistic disfigurement; (c) a neurotic-type hope; and (d) a psychic attitude that sexual life is secondary to motor impairment. Positive attitudes are easier in unmarried Ss; the presence of the partner in married Ss makes the mechanism of isolation, d, more difficult. When the S experiences sexual disturbances before paralysis, there is often an improvement psychologically, for the S can now justify his problem.—*A. M. Farfaglia.*

Brain Damage

10495. Butters, Nelson; Barton, Melvin, & Brody, Betty A. (Veterans Administration Hosp., Boston, Mass.) **Role of the right parietal lobe in the mediation of cross-modal associations and reversible operations in space.** *Cortex*, 1970(Jun), Vol. 6(2), 174-190.—"16 patients with high hemisphere cerebral damage, 12 with severe and 4 with mild parietal signs, were administered 2 intra- and 3 cross-modal associative tasks as well as 3 tests requiring spatial reversible operations. The 12 patients with severe parietal signs were impaired on tactile-tactile and auditory-visual matching and on all 3 spatial tasks, while the 4 patients with mild parietal signs did not reveal deficits on any test. Further testing indicated that the right parietals' impairments on the auditory-visual task were associated with an inability to decode the auditory patterned stimulus rather than to a failure in cross-modal associations. When the performance of the right hemisphere patients was compared with the data from left hemisphere patients, it appeared that the left parietal region may be dominant for cross-modal associations, but that both the left and right are important for spatial reversible operations."—*R. Gunter.*

10496. Calabro, Vincenza C. (Adelaide Children's Hosp., South Australia) **Communication with the child following traumatic head injury.** *Australian Occupational Therapy Journal*, 1969(Jan), Vol. 16(1), 23-26.—Discusses methods of communication derived from the treatment of 10 children with head injuries from automobile accidents. It is hypothesized that "by opening every possible channel of communication and by making communication attractive, desirable, and attainable by the patient, the occupational therapist is

able to encourage and assist physical, intellectual and emotional recovery." A wide range of stimuli are presented for short periods to the child in the earliest stages of treatment. Responsiveness indicated by facial expressions or eye-pointing, allows for proceeding to simple communication—imitation of monosyllabic noises. Further treatment involving the acquisition of motor skills and recovery of speech is outlined, along with the problems of variability of performance and personality and behavior problems.—S. Knapp.

10497. Czudner, Gad & Rourke, Byron P. (U. Windsor, Ontario, Canada) **Simple reaction time in "brain-damaged" and normal children under regular and irregular preparatory interval conditions.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 767-773.—Employed 2 different RT conditions to explore differences in mental set between 15-14 yr. old boys with anamnestic and/or EEG evidence of cerebral dysfunction (the brain-damaged group) and a control group of 15 normal boys, matched for age and IQ. The procedure consisted of regular and irregular preparatory interval conditions. Results demonstrate that latency was directly related to length of preparatory interval for the normals but not for brain-damaged Ss. No clear separation between normal and brain-damaged Ss was obtained when the set-index formula was employed. However, when ages 8-10 were analyzed separately, a good separation could be obtained. (18 ref.)—*Journal abstract*.

10499. Grundvig, John L., Needham, Walter E., Ajax, Ernest T., & Beck, Edward C. (Veterans Administration Hosp., Knoxville, Ia.) **The use of the Sensory-Perceptual Examination in diagnosis of degree of impairment of higher cerebral functions.** *Journal of Nervous & Mental Disease*, 1970(Aug), Vol. 151(2), 114-119.—Describes the battery of tests which make up the Sensory-Perceptual Examination (SPE). The effectiveness of the SPE was investigated using 120 hospital patients with suspected brain damage or patients whose degree of impairment was in question. Ss were separately rated on a 4-point scale by a neurologist. Analysis of SPE performances shows that the battery substantially reflects the neurological criteria for degree of impairment. 2 additional tests are described which are being studied for inclusion in the SPE.—S. Knapp.

10500. Kraemer, R. **Der Hirnverletzte nach der Erstversorgung.** [Brain injury after initial care.] *Psychiatria Clinica*, 1969, Vol. 2(5), 279-288.—Discusses particular problems encountered with the rehabilitation and training of the brain-injured patient. The roles of the social environment and of the attitudes of persons toward the brain-injured patient are discussed as factors which profoundly effect the patients' prognosis. (English summary)—B. A. Stanton.

10501. Lüthi, F. (U. Basel, Children's Psychiatric Service, Switzerland) **Normwerte für den Reyschen Kople- und Reproduktionstest zur Erfassung von organischen Hirnschäden bei Kindern.** [Normative values of the Rey Test used to establish organic brain damage in children.] *Acta Paedopsychiatrica*, 1970(Apr), Vol. 37(4-5), 118-136.—120 6-11 yr. old physically and mentally healthy children with normal intelligence took

an intelligence and a figure-copying test. The significance of constellations in the copying test were analyzed for relationships with the intelligence test. Some aspects of the Gestalt phenomena of the drawings are considered.—G. Rubin-Rabson.

10502. Richards, Susan. **The occupational therapy programme for the brain injured patient.** *Australian Occupational Therapy Journal*, 1969(Jan), Vol. 16(1), 12-22.—Describes 5 stages in the rehabilitation of the brain damaged patient. Stages 1-3 center on bringing the patient from a semiconscious condition to a level of responding, learning, and concentrating, while Stages 4 and 5 involve retraining of behavior, vocational training, and counseling. The patient's condition and the aims and techniques of treatment are described for each stage. It is concluded that the occupational therapist more than any other single person has the "responsibility to stimulate an awareness, guide, reeducate, develop potential abilities and skills, and modify the behaviour of the patient."—S. Knapp.

10503. Williamson, P. D., Goff, W. R., & Allison, T. (Walter Reed Army Inst. of Research, Washington, D.C.) **Somato-sensory evoked responses in patients with unilateral cerebral lesions.** *Electroencephalography & Clinical Neurophysiology*, 1970(Jun), Vol. 28(6), 566-575.—Tested the hypothesis that early and late somatic evoked response (SER) components are mediated, respectively, by activity of the short latency lemniscal pathway and by the extralemniscal, bilaterally projecting reticular and nonspecific thalamocortical pathways. The scalp-recorded SER was examined in 17 Ss, 14 of whom had unilateral cerebral lesions that involved parietal cortex and resulted in somatic sensory deficit. In those Ss with severe sensory loss, all SER components were markedly reduced or abolished over both hemispheres when the affected side was stimulated. Ss with mild to moderate sensory impairment exhibited either a normal response or a generalized attenuation of all components when the affected side was stimulated. Stimulation of the normal side evoked relatively normal responses over both hemispheres in all Ss. These results and others discussed are consistent with the conclusion that the entire contralateral SER is the result of activity in primary somatic cortex mediated solely by the medial lemniscal system. (French summary) (34 ref.)—*Journal summary*.

Epilepsy

10504. Dewhurst, Kenneth & Beard, A. W. (Littlemore Hosp., Oxford, England) **Sudden religious conversions in temporal lobe epilepsy.** *British Journal of Psychiatry*, 1970(Nov), Vol. 117(540), 497-507.—Describes 6 cases of religious conversion experiences occurring in patients with temporal lobe epilepsy. The conversion experiences of various mystics and saints, who were probably epileptic, are reviewed. Some theological and psychiatric aspects of conversion are discussed. (58 ref.)—*Journal summary*.

10505. Friemert, K. (U. Berlin, Neurology Clinic, E. Germany) **Über gemeinsames Auftreten epileptischer und hysterischer Anfälle.** [On the joint occurrence of epileptic and hysteric seizures.] *Psychiatrie, Neurologie und medizinische Psychologie*, 1970(Jul), Vol. 22(7), 253-255.—From a total of 263 epileptic patients, 20 showed simultaneous symptoms of epileptic and hysteric

seizures. About 75% of the experimental group had premorbid hysterical symptoms and the same percentage were women patients. It is concluded that epileptics with simultaneous hysterical seizures are evidently people of hysterical temperament.—K. J. Hartman.

10506. Gibberd, F. B. (Westminster Hosp., London, England) **Epilepsy.** *British Medical Journal*, 1969(Nov), Vol. 4(5678), 281-284.—Discusses epilepsy from the viewpoint of the drug treatment and social management of special categories of epileptic patients. Various forms of epilepsy are described, including nocturnal epilepsy, epilepsy during drowsiness, photogenic epilepsy, focal epilepsy, status epilepticus, and epilepsy during pregnancy. The primary anticonvulsant drugs are identified, with recommended dosages and a listing of chief side effects. Specific problems of epileptic children are discussed including those which concern the school experience. Problems in employment and personal life for the epileptic adult are also noted. Resources for dealing with the social service aspects of patient care are included. (21 ref.)—I. Halev.

10507. Haerer, A. F., Buchanan, R. A., & Wiygul, F. M. (U. Mississippi, Medical Center, Jackson) **Ethosuximide blood levels in epileptics.** *Journal of Clinical Pharmacology & the Journal of New Drugs*, 1970(Nov), Vol. 10(6), 370-374.—Describes ethosuximide blood levels in a clinical setting. 21 children and adults with petit mal or mixed seizure disorders received ethosuximide in varying doses. Ethosuximide levels were determined periodically and compared with the dose and various other clinical parameters. An average blood level of 40 ± 14.9 mg/ml was obtained from an average daily dose of ethosuximide of 20.7 ± 5.8 mg/kg.—*Journal summary.*

10508. Ledesma Jimeno, A. & Paniagua, J. L. **Circumvolución del cíngulo y agresividad.** [Circumvolution of the cinguli and aggression.] *Actas Luso-Españolas de Neurología y Psiquiatría*, 1969(Oct), Vol. 28(4), 289-298.—Presents case histories of 2 epileptics (a 13-yr-old mentally retarded male and a 25-yr-old male of normal intelligence) who manifested aggressive symptoms and who had not responded to previous therapy. Stereotaxic anterior cingulectomies resulted in the disappearance of aggression in 1 S and the normalization of aggressive tendencies in the other S. Cases are cited in which the same operation proved effective in improving severe depression. It is concluded that circumvolution of the cinguli is a useful treatment for various mental disorders where the principal symptom is aggression and all other therapeutic devices have failed.—P. Hertzberg.

10509. Lücking, Carl H., Creutzfeldt, Otto D., & Heinemann, Uwe. (Technical Inst., Neurological Clinic, Munich, W. Germany) **Visual evoked potentials of patients with epilepsy and of a control group.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 557-566.—Recorded averaged visual evoked potentials (VEPs) to 100 flashes with reference to the chin from the occipital, temporal, and central areas of 42 patients with epilepsy and 30 healthy controls. The interindividual variability of the VEPs was larger in the patient than in the control group. Different types of epilepsy could not be discriminated by their VEPs, although the VEPs of Ss with pathological paroxysmal wave forms in the EEG were more abnormal and variable than those of other patients, and 2 Ss with photogenic epilepsy had abnormally large VEPs, espe-

cially in the occipital area. The maximal peak-to-peak amplitudes of VEPs of epileptics were on the average slightly diminished in all areas, significantly at the .01 level in the temporal and central areas. The mean potential was much more diminished in the epileptics than the maximal peak-to-peak amplitudes due to the larger variability of the whole VEP pattern. The mean VEP of Ss with paroxysmal EEG alterations was almost a flat line. Diagnostic uses of the VEP technique are discussed. (German summary) (19 ref.)—*Journal summary.*

10510. Paolozzi, C., Colucci d'Amato, C., & Bravaccio, F. (U. Naples, Clinic for Nervous & Mental Diseases, Italy) **Inconusueti aspetti elettro-clinici in un caso di nistagmo epilettico.** [Unusual electro-clinical aspects in a case of epileptic nystagmus.] *Acta Neurologica*, 1970(Jul), Vol. 25(4), 450-456.—Studied a 30-mo-old child with epileptic nystagmus. The following distinguished this case from others: (a) nystagmus was the only manifestation of a focal epilepsy for the child's 1st 19 mo.; (b) nystagmus, even with convulsions, was absent of established clinical signs of determined cortical centers, e.g., absence of tonic eye and head deflections; (c) nystagmus attacks were of uncommonly brief duration; and (d) by simultaneous EEG and nystagmographic recordings, there was a precise temporal correlation between seizures and nystagmus. The presence in the right temporal site of focal irritative abnormalities did not always correspond to the nystagmus jerks which were clinically and graphically visible. (English & French summaries)—A. M. Farfaglia.

10511. Pisani, D., Ardizzone, E. C., & Nigro, A. (U. Messina, Italy) **"Passatizzazione" dell'epilettico per azione riflessa.** ["Pasting" of the epileptic's electroencephalograph by reflex action.] *Rivista di Neurobiologia*, 1969(Aug), Vol. 15(3), 400-407.—Describes the "pasting" of the EEG as the reduction of the percentual alpha by change of the body's position. The application of silicon on the palm of the hand produces EEG changes characteristic of "pasting" in epileptic Ss. The value and the mechanism of this variation in reflex action are discussed.—*English summary.*

10512. White, James C. (San Jose Medical Clinic, Calif.) **A case of reading epilepsy with observations on the effect of sleep deprivation and fasting on EEG correlates.** *Electroencephalography & Clinical Neurophysiology*, 1970(May), Vol. 28(5), 510-513.—Describes EEG studies of a 19-yr-old male with reading epilepsy in which abnormalities occurred only after sleep deprivation or fasting. It is suggested that studies utilizing these activation techniques on other patients with reading epilepsy may alter views on the classification and pathophysiology of this condition. (French summary)—*Journal summary.*

10513. Woo-Sam, James. (Rancho Los Amigos Hosp., Downey, Calif.) **Note on Wechsler Comprehension and Picture Arrangement scores of head-injured epileptics.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 818.—Analyzed the scores of 23 head-injured veterans matched for age, IQ, and education, 9 of whom were epileptic. Previously reported findings were not supported. The scores of epileptic and nonepileptic Ss on the Wechsler-Bellevue Picture Arrangement and Comprehension subtests were not statistically significant, although epileptics scored slightly higher on the Picture Arrangement test and slightly lower on the Comprehension test.—S. Knapp.

distinction between phenotype and genotype in intelligence in reply to G. W. Albee's (see PA, Vol. 45:Issue 6) article on changing research priorities in retardation. Albee states that since 2 1/4% of the population will always be retarded as a result of polygenic inheritance that an emphasis on educational and habilitative rather than biomedical research is needed. Doris indicates that the interaction of heredity and environment decides which 2 1/4% will fall on the lower end of the Gaussian distribution and, therefore, to consider only polygenic inheritance in intelligence is misleading. It is agreed that educational programs are necessary, but warns against large-scale crash program attacks on problems on the basis of the shifting and partial insights of scientists. The premature application of "scientific knowledge" can create more problems than it solves.—L. M. Glidden.

10522. Freeman, Roger D. (U. British Columbia, Vancouver, Canada) **The myth of perfectibility.** *Journal of Special Education*, 1970(Spr), Vol. 4(2), 171-176.—Replies to G. W. Albee's (see PA, Vol. 45:Issue 6) article on changing research priorities in retardation, and agrees with the attack on the myth of perfectibility as it applies to retardation. Albee is criticized, however, for an argumentative style which could cause dissension when cooperation is needed. It is pointed out that the interaction of polygenic factors with prenatal, perinatal, and postnatal factors is extremely complex, and that there is doubt that intelligence is distributed normally. It is suggested that loose-thinking conclusions, based on tenuous hypotheses and misleading statements, be eliminated by those working in the area. (20 ref.)—L. M. Glidden.

10523. Gardner, William I. & Brickin, Alan S. (U. Wisconsin) **Use of punishment procedures in management of behavioral difficulties of the severely retarded.** *Journal of Psychiatric Nursing & Mental Health Services*, 1969(Jan), Vol. 7(1), 5-16. Questions the attitudes which many nursing personnel hold concerning punishment and suggests that punishment procedures can become an accepted element in a comprehensive behavior modification program for this group. Such procedures used wisely are not inhumane. Dramatic results have been reported which far offset the momentary pain involved in the treatment procedure. It would appear that the inhumane position would be that of permitting severely damaging behavior to remain in the retardates' repertoire in view of data which support the possible effectiveness of remediation procedures involving punishment operations. (25 ref.) *Journal summary*.

10524. Johnson, H. R., et al. (Raimer School, Buckley, Wash.) **Effects of testosterone on body image and behavior in Klinefelter's syndrome: A pilot study.** *Developmental Medicine & Child Neurology*, 1970(Aug), Vol. 12(4), 454-460.—5 9-24 yr. old mentally retarded patients with Klinefelter's syndrome responded to the testosterone enanthate treatment over 6-7 mo. with the development of a more masculine body contour, secondary sex characteristics, increased assertiveness, heightened sexual drive, and greater masculinity in the Draw-a-Person Test.—P. W. Pruyser.

10525. Maloney, Michael P. & Ward, Michael P. (Pacific State Hosp., Pomona, Calif.) **Bender-Gestalt Test performance of "organic" and "functional" mentally retarded subjects.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 860.—Investigated the validity of the Bender Gestalt Test in differentiating etiologic

classifications of retardation. 50 were 18 organic and 16 functional retarded institutionalized adolescent males. The modified scoring system of L. M. Koppitz with 2 additional modifications was used. Results indicate that the functional group performed significantly better than the organic group ($p = .05$). It is concluded that "The Bender Gestalt may be a useful auxiliary tool in the differentiation of organic etiology in mental retardation"—S. Anapp.

10528. Moskau, G. & Bertini, R. **Contributo allo studio del quadro elettroencefalografico nel mongolismo** [Contribution to the study of electroencephalographic findings in mongolism]. *Rivista di Neurofisiologia*, 1969(Aug), Vol. 12(4), 409-421. Reviews the literature concerning EEG investigations on children with Down's syndrome. A review of a 4-yr. personal investigation of EEG activity in 32 10-17 yr. old mongoloids is presented. 50 were investigated under various types of stimulation. Results are presented in the form of characteristic EEG tracings. The most common finding is described as immaturity of electrogenesis—a deficit in the amount of reactivity to various forms of applied stimulation. (English summary) (13 ref.)—R. A. Steinman.

10529. Martin, Kenneth N. (Michigan State U.) **Attitudes of Texas Mexican Americans toward mental retardation: A Guttman facet analysis.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(A), 1082.

10530. Nelson, Thomas L. (U. California, Irvine) **The case for multidisciplinary research efforts in mental retardation.** *Journal of Research & Development in Disabilities*, 1970, Vol. 4(2), 177-179. Asserts that both research and clinical determine every person's educational functioning, and the amelioration of mental retardation can require the scientific expertise of many disciplines. Scientists from various fields working together will cross traditional boundaries between disciplines. Such a multidisciplinary approach offers greater hope for meaningful breakthroughs in knowledge than only a single discipline. No one can predict which research approach will offer the greatest reward for funds expended, and therefore, as priorities between disciplines should not be assigned, all disciplines should recognize each other's essential contribution and strive for increasing multidisciplinary research. *Journal summary*.

10531. Perry, Thomas L., et al. (U. British Columbia, Vancouver, Canada) **Glutamine depletion in phenylketonuria: A possible cause of the mental defect.** *New England Journal of Medicine*, 1970(Sep), Vol. 282(14), 761-762.—2 adult brothers with untreated phenylketonuria, 1 with a severe mental defect and the other with superior intelligence, were compared biochemically. No significant differences were found in their degree of hyperphenylalaninemia nor in their urinary excretion of phenylalanine metabolites. A striking difference between the 2 brothers was a significant reduction in concentration of glutamate in the

plasma of the defective brother, but not in the intelligent brother. A 2nd adult with untreated phenylketonuria and normal intelligence, as well as a group of phenylketonuric children who were receiving a low-phenylalanine diet, also had plasma glutamine concentrations within the normal range. 12 mentally defective untreated patients with phenylketonuria all showed a significant reduction in plasma glutamine. Findings cast doubt on some proposed mechanisms for the mental defect in phenylketonuria, and suggest that chronic insufficiency of glutamine may play a part in damaging the growing human brain. (29 ref.)—*Journal summary*.

10532. Rolland, John C. (U. Oregon) **An identification of person-environment social transactions and response patterns of trainable mentally retarded adolescents in different environmental settings.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 938-939.

10533. Rossi, Albert O. **Mentally retarded child and pharmacologic therapy.** *New York State Journal of Medicine*, 1969(Nov), Vol. 69(22), 2881-2885.—Summarizes results of 15 yr. of drug research pertaining to learning in the mentally retarded. Phenothiazines provide good management for severely disturbed children, independent of IQ or etiology. Dexedrine, ritalin, benadryl, and prolantane were found to be useful in treating trainable, retarded children. Prolantane was found to be the most effective drug for improvement of visual and motor perception and dyslexia. It is emphasized that the personality of the educable, retarded child has many depressive elements (i.e., insecurity, poor self-image, etc.). A combined pharmacological approach to these problems is suggested which entails the administration of a CNS stimulant in the morning and an antidepressant in the late evening. This method of management is seen to improve classroom performance and learning behavior. (15 ref.)—*B. A. Stanton*.

10534. Shannon, Charley H. (U. Texas) **Heart rates of three age groups of normal and mentally retarded boys.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1606.

10535. Spigelmeyer, Joyce A. (Pennsylvania State U.) **Congruency of family concept, adaptability, and coping behavior held by parents of mentally retarded children.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1917-1918.

10536. Taylor, Hayward G. (Temple U.) **The therapeutic role and tolerance for ambiguity.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1376.

10537. Walter, Donald O. (U. California, Los Angeles) **Some logical and mathematical errors in support of a worthy cause.** *Journal of Special Education*, 1970(Spring), Vol. 4(2), 181-183.—Replies to G. W. Albee's (see PA, Vol. 45:Issue 6) article on research priorities in retardation. Disagreement is expressed on 3 points: (a) Albee assumes that curves distributed in an approximately Gaussian manner are the same as those distributed precisely Gaussian. As a result of this mathematical inaccuracy he misestimates both the present and future amount of retardation due to polygenic inheritance. (b) It is unknown how much of the inheritance of intelligence is polygenic. Biomedical research is important for that portion of retardations which are caused by major genes. (c) The assumption that research money is relatively fixed for specific fields is fallacious.—*L. M. Glidden*.

land) **Zur Problematik einer testmässigen Erfassung des psychischen Entwicklungsstandes bei psychomotorisch retardierten Kindern.** [Problems of test assessment of the state of psychological development in children with psychomotor retardation.] *Schweizerische Zeitschrift für Psychologie und ihre Anwendungen*, 1970, Vol. 29(3), 430-433.—Discusses several deficiencies shown by traditional developmental scales. The diagnostic system by H. J. Mark as a tool for testing the whole cognitive organization in the individual by methods of system analysis is considered to be a fruitful alternative in this area. (French summary)—*English summary*.

Learning & Motor Ability

10539. Annicchiarico, James R. (U. Texas) **Syntactically mediated paired-associate learning of normal and educationally retarded Anglo- and Mexican-American children.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1610.

10540. Berry, Franklin M. (U. Alabama) **Paired-associate learning of normal children and retardates with relevant redundant compound stimuli.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3884-3885.

10541. Chinn, Philip C. & Kolstoe, Oliver P. (U. Utah) **Concept-switching task performance as a function of rewards.** *Journal of Experimental Education*, 1969(Sum), Vol. 37(4), 21-25.—Administered the J. S. Kounin concept-switching task to groups of 30 institutionalized mentally retarded, 30 noninstitutionalized mentally retarded, 30 lower-class normal, and 30 middle-class normal children matched on MA. The concept switching task was administered under 3 different reward conditions: promise of reward, low tangible reward, and high tangible reward. Differences in performance between groups was tested by means of a 3×4 analysis of variance. F tests yielded no significant differences at the .05 level. Neither Kounin's concept of rigidity nor E. F. Zigler's deprivation motivational hypothesis were supported.—*Journal abstract*.

10542. Ferneti, Casper L. (U. Oregon) **Associative motor learning as a function of age and intelligence.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1071-1072.

10543. Liebert, Robert M. & Swenson, Sharon A. (State U. New York, Stony Brook) **Association and abstraction as mechanisms of imitative learning.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 289-294.—Examined children's ability to recall the commodity preferences of an adult model in a 2 (common dimension vs. no common dimension of the modeled responses) $\times 2$ (number of modeled responses: 6 or 18) $\times 2$ (sex of an S) factorial design. The presence of a common dimension did not increase the number of items recalled by Ss who had observed only 6 responses, but clearly facilitated the recall of those for whom 18 responses had been modeled. 96 boys and 96 girls, both normal and retarded, were Ss. Response latencies were shorter for the common dimension groups than for their no common dimension counterparts regardless of the number of modeled responses which were to be recalled. Results are consistent with the view that, under specifiable circumstances, children's imitative recall may be mediated by an abstraction process rather than exclusively by associative learning. (15 ref.)—*Journal abstract*.

10546. Yando, Regina & Zigler, Edward. (Harvard U.) **Outerdirectedness in the problem-solving of institutionalized and noninstitutionalized normal and retarded children.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 277-288.—8 groups of 24 children, institutionalized and noninstitutionalized, familial and organic retarded, and younger and older normal children, were given 2 measures of outerdirectedness. 1 was a 3-choice discrimination learning task in which a light was presented above 1 of the 2 incorrect stimuli; the 2nd was a task in which the child could imitate designs made by an adult or presented by a machine. The 4 retarded groups were found to be more outerdirected (i.e., selected the erroneous cued stimulus and imitated more often) than the 4 normal groups. The younger non-institutionalized normal Ss were found to be more imitative than the older normal Ss. Institutionalization for both normal and retarded Ss and the etiology of retardation were also found to be related to degree of outerdirectedness.—*Journal abstract.*

Training & Vocational Rehabilitation

10547. Coogan, David & Kaplan, Henry K. (Mendota State Hosp., Madison, Wis.) **Moving the hard to move.** *Mental Hygiene*, 1970(Oct), Vol. 54(4), 520-524.—Describes a program for hospitalized adolescents who were becoming chronic patients. Ss were 17-18 yr. old boys and girls, who were severely retarded academically and had a mean IQ of 79. Their median stay in the hospital was 23 mo. (some had been hospitalized for as long as 7 yr.) in contrast to the approximate 6-mo stay of the average patient. It was found that Ss responded favorably to a combination of constant direction and pressure with activities designed to foster a sense of independence. The program included 4 related kinds of activities: (a) practice in independent functioning and social competency, (b) in-hospital training in skills, (c) community-based work habit training, and (d) individual on-the-job training.—*Journal abstract.*

PHYSICAL ILLNESS

10550. ———. **Asthma in children.** *Medical Journal of Australia*, 1970(Mar), Vol. 1(10), 457-458.—Reports a study by H. E. Williams and K. N. McNicol of asthma, and mildly, and moderately wheezy bronchitis in 7 yr. olds. Ss were randomly selected from the general community and compared with a control group

until reaching age 10 yr. Findings strongly support the hypothesis that Ss from all 3 groups have a common defect but vary widely in the severity and frequency of attacks. Evidence does not support the view that there are different types of asthma in children, e.g., infective, allergic, or emotional. Data suggest that children with recurrent wheezing come from a population which has genetically determined abnormal immunological reactions and has hyperreactivity of the respiratory epithelium to a wide variety of stimuli.—*M. West.*

10551. ———. **Headache and hypertension.** *British Medical Journal*, 1970(Aug), Vol. 3(5718), 299-300.—Studied the incidence of headache in patients suffering from hypertension. The headache usually appeared when waking up and was of short duration; good blood pressure alleviated the headache. Ss with a mild form of hypertension and the controls with normal blood pressure had only occasional attacks of headache of longer duration. Ss with severe hypertension whose headache increases in intensity despite good blood pressure control, must be examined for a raised intracranial pressure, which may be caused by hypertensive encephalopathy or cervical spondylosis. Other possible causes are berry aneurism, glaucoma, or neurosis.—*I. Halev.*

10552. Barbeau, André. (U. Montreal, Quebec, Canada) **Rationale for the use of L-dopa in the torsion dystonias.** *Neurology*, 1970(Nov), Vol. 20(11, Pt. 2), 96-102.—Following the sometimes spectacular results seen with L-3,4-dihydroxyphenylalanine (L-dopa) in patients with Parkinson's disease and in manganese miners, it was natural for many groups to try the same approach in other presumed disorders of the basal ganglia. Although, historically, this is how L-dopa came to be used in the torsion dystonias (dystonia musculorum deformans), there are still some advantages in listing arguments justifying a rationale for L-dopa in this group of disorders. At the very least, such an approach should help in delineating the fallacies in what appears to be "logical" reasoning. Such is the purpose of the present review. The hypothesis would imply that some but not the majority of patients with 1 of the hereditary torsion dystonias would benefit from L-dopa treatment. Others should respond to high doses of other precursors like 5-hydroxytryptamine, glutamic acid, or choline. Preliminary clinical evidence seems to corroborate this view.—*Journal summary.*

10553. Buchsbaum, Monte & Henkin, Robert I. (National Inst. of Mental Health, Bethesda, Md.) **Serum calcium concentration and the average evoked response.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 10-16.—Studied the effect of serum calcium concentration on the visual average evoked response (AER) in 24 patients with disorders of calcium metabolism and in 6 normal volunteers given parathyroid extract. Low serum calcium concentrations (below 8 mg/100 ml.) were associated with greater amplitude and shorter latency evoked responses than were high serum calcium concentrations (above 12 mg/100 ml.). Administration of parathyroid extract in doses that affected the serum calcium minimally had no effect on the AER latency or amplitude. It is suggested that AER latency and amplitude changes are correlated with serum calcium concentration rather than with the Ss' diagnostic category. (French summary)—*Journal summary.*

10554. Cabanac, M. & Duclaux, R. (U. Lyon, Medical

plasma of the defective brother, but not in the intelligent brother. A 2nd adult with untreated phenylketonuria and normal intelligence, as well as a group of phenylketonuric children who were receiving a low-phenylalanine diet, also had plasma glutamine concentrations within the normal range. 12 mentally defective untreated patients with phenylketonuria all showed a significant reduction in plasma glutamine. Findings cast doubt on some proposed mechanisms for the mental defect in phenylketonuria, and suggest that chronic insufficiency of glutamine may play a part in damaging the growing human brain. 10533. Rossi, Albert O. **Mentally retarded child and pharmacologic therapy.** *New York State Journal of Medicine*, 1969(Nov), Vol. 69(22), 2881-2885.—Summarizes results of 15 yr. of drug research pertaining to learning in the mentally retarded. Phenothiazines provide good management for severely disturbed children, independent of IQ or etiology. Dexedrine, ritalin, benadryl, and prolintane were found to be useful in treating trainable, retarded children. Prolintane was found to be the most effective drug for improvement of visual and motor perception and dyslexia. It is emphasized that the personality of the educable, retarded child has many depressive elements (i.e., insecurity, poor self-image, etc.). A combined pharmacological approach to these problems is suggested which entails the administration of a CNS stimulant in the morning and an antidepressant in the late evening. This method of management is seen to improve classroom performance and learning behavior. (15 ref.)—*B. A. Stanton*.

Albee's (see PA, Vol. 45:Issue 6) article on research priorities in retardation. Disagreement is expressed on 3 points: (a) Albee assumes that curves distributed in an approximately Gaussian manner are the same as those distributed precisely Gaussian. As a result of this mathematical inaccuracy he misestimates both the present and future amount of retardation due to polygenic inheritance. (b) It is unknown how much of the inheritance of intelligence is polygenic. Biomedical research is important for that portion of retardations which are caused by major genes. (c) The assumption that research money is relatively fixed for specific fields is fallacious.—*L. M. Glidden*.

10543. Liebert, Robert M. & Swenson, Sharon A. (State U. New York, Stony Brook) **Association and abstraction as mechanisms of imitative learning.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 289-294.—Examined children's ability to recall the commodity preferences of an adult model in a 2 (common dimension vs. no common dimension of the modeled responses) \times 2 (number of modeled responses: 6 or 18) \times 2 (sex of an S) factorial design. The presence of a common dimension did not increase the number of items recalled by Ss who had observed only 6 responses, but clearly facilitated the recall of those for whom 18 responses had been modeled. 96 boys and 96 girls, both normal and retarded, were Ss. Response latencies were shorter for the common dimension groups than for their no common dimension counterparts regardless of the number of modeled responses which were to be recalled. Results are consistent with the view that, under specifiable circumstances, children's imitative recall may be mediated by an abstraction process rather than exclusively by associative learning. (Harvard U.) **Outerdirectedness in the problem-solving of institutionalized and noninstitutionalized normal and retarded children.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 277-288.—8 groups of 24 children, institutionalized and noninstitutionalized, familial and organic retarded, and younger and older normal children, were given 2 measures of outerdirectedness. 1 was a 3-choice discrimination learning task in which a light was presented above 1 of the 2 incorrect stimuli; the 2nd was a task in which the child could imitate designs made by an adult or presented by a machine. The 4 retarded groups were found to be more outerdirected (i.e., selected the erroneous cued stimulus and imitated more often) than the 4 normal groups. The younger noninstitutionalized normal Ss were found to be more imitative than the older normal Ss. Institutionalization for both normal and retarded Ss and the etiology of retardation were also found to be related to degree of outerdirectedness.—*Journal abstract.*

Others should respond to high doses of other precursors like 5-hydroxytryptamine, glutamic acid, or choline. Preliminary clinical evidence seems to corroborate this view.—*Journal summary.*

10553. Buchsbaum, Monte & Henkin, Robert I. (National Inst. of Mental Health, Bethesda, Md.) **Serum calcium concentration and the average evoked response.** *Electroencephalography & Clinical Neurophysiology*, 1971(Jan), Vol. 30(1), 10-16.—Studied the effect of serum calcium concentration on the visual average evoked response (AER) in 24 patients with disorders of calcium metabolism and in 6 normal volunteers given parathyroid extract. Low serum calcium concentrations (below 8 mg/100 ml.) were associated with greater amplitude and shorter latency evoked responses than were high serum calcium concentrations (above 12 mg/100 ml.). Administration of parathyroid extract in doses that affected the serum calcium minimally had no effect on the AER latency or amplitude. It is suggested that AER latency and amplitude changes are correlated with serum calcium concentration rather than with the Ss' diagnostic category. (French summary)—*Journal summary.*

10554. Cabanac, M. & Duclaux, R. (U. Lyon, Medical

School, France) **Obesity: Absence of satiety aversion to sucrose.** *Science*, 1970(Apr), Vol. 168(3930), 496-497.—In an experiment with 15 obese patients, it was found that ingestion of glucose did not cause the transformation of the gustative sucrose sensation from pleasant to unpleasant as in 10 normal Ss. This result is consistent with the theory of a decreased sensitivity to internal signals in the control of food intake of obese people.—*Journal abstract.*

10555. Clarke, Paul S. (270 Sandy Bay Rd., Hobart, Tasmania, Australia) **Effects of emotion and cough on airways obstruction in asthma.** *Medical Journal of Australia*, 1970(Mar), Vol. 1(11), 535-537.—Studied under hypnosis the effects of suggesting fear, anger, cough, and an asthmatic attack, alone or in combination, in 3 asthmatic patients, using a spirometric method of assessment of airways obstruction. A significant decrease in forced expiratory volume at 1 sec. was observed with the suggestion of asthma alone, and more particularly on the combined suggestions of asthma, fear, anger, and cough. No statistically significant decrease in ventilatory capacity occurred on coughing by itself, or the suggestion of fear or anger. On the average, these effects were reversed by suggestions of relaxation, but the scatter of postexperimental measurements was wide. The experiments were not designed to study the relationship between chronic emotional tension and the initial onset of asthma, neither were they an assessment of the value of hypnosis in the treatment of asthma.—*Journal abstract.*

10556. Clezy, T. M. (Hawkins Medical Clinic, Mt. Gambier, South Australia) **Oral contraceptives and hypertension: The effect of guanethidine.** *Medical Journal of Australia*, 1970(Mar), Vol. 1(13), 638-640.—Describes 11 cases of hypertension associated with oral contraceptives. Treatment of 5 patients with guanethidine did not result in a satisfactory hypotensive response. Possible reasons for this phenomenon are discussed.—*Journal abstract.*

10557. Cole, E. S. (33 Queens Rd., Melbourne, Victoria, Australia) **Psychiatric aspects of compensable injury.** *Medical Journal of Australia*, 1970(Jan), Vol. 1(3), 93-100.—Reviewed the histories of 292 people referred for psychiatric assessment after compensable injury. It was found that most were suffering from neurotic disorders, notably anxiety states and reactive depressions. Hysterical reactions were found to be commonest amongst the immigrant population, the unskilled and the poorly educated. Psychoses and brain damage are mentioned. The problem of accident neurosis and its relationship to hysteria and malingering is discussed. It is concluded that many of the psychiatric and social problems of the injured have been obscured in the past, because most attention has been directed toward accident neurosis.—*Journal abstract.*

10559. Dodge, David L. & Martin, Walter T. (U. Notre Dame) **Social stress and chronic illness: Mortality patterns in industrial society.** Notre Dame, Ind.: U. Notre Dame Press, 1970. xxvi, 331 p. \$9.95.

10560. Etienne, M. **Psychologie de l'enfant et de l'adolescent obèses Incidences sur l'orientation scolaire et professionnelle.** [Psychology of the obese child and adolescent, as affecting school and occupa-

tional guidance.] *Bulletin de l'Institut National d'Etude du Travail et d'Orientation Professionnelle*, 1970(May), Vol. 26(3), 212-216.—Briefly discusses the psychological characteristics of obese children and adolescents, considering family backgrounds and sex differences in behavior of the latter. Maladjustment in school, if untreated, sets the stage for later problems concerning choice of occupation. If the obese adolescent is emotionally, as well as physically handicapped, his passivity may lead to a choice of a type of occupation which will further aggravate his obesity. The long-term prognosis, occupational problems, and contraindications for certain jobs of the obese, as well as the predominance of psychological factors involved in etiology and treatment, call for the team approach to management by family physician, school counselor, and guidance counselor.—*T. N. Webster.*

10561. Fagerhaugh, Shizuko Y. (U. California, School of Nursing, San Francisco) **Mental illness and the tuberculosis patient.** *Nursing Outlook*, 1970(Aug), Vol. 18(8), 38-41.—Describes contrasting perceptions of mental illness by psychiatric and tuberculosis specialists which created barriers to the management of institutionalized tuberculosis patients with behavior problems. Most of the professional workers were older, had worked in the tuberculosis field for many years, and had used specific antitubercular drugs and routine treatment. The psychiatric professionals were young and were used to working with an array of deviant behaviors and groups. Mental illness is quite ambiguous and its therapy is not specific. The psychiatrists viewed the patient's behavior as situational anxiety and felt that the staff was inept in interpersonal skills. Solutions should include inservice education programs for the TB staff, reduction of factors contributing to patient anxiety in a long-term care facility, and psychiatric consultation appropriate to the particular situation.—*B. A. Burkard.*

10562. Farberow, Norman L., Darbonne, Allen R., Stein, Kenneth, & Hirsch, Sophie. (Veterans Administration Center, Central Research Unit, Los Angeles, Calif.) **Psychological Reports**, 1970(Dec), Vol. 27(3), 935-946.—12 "uncooperative" diabetic Ss were interviewed and tested in the hospital, using a structured interview, behavior and attitude rating schedule, and the Rorschach. A general descriptive picture was derived, but subgroups also appeared, based upon the dynamics of the S in relation to the illness. In 1 subgroup, the illness played no meaningful role; in the 2nd, the illness had been integrated into defensive patterns deliberately manipulated for personal satisfaction. Different treatment procedures are suggested.—*Journal abstract.*

10563. Gay, T. J., et al. (Alfred Hosp., Victoria, Australia) **Blood alcohol concentrations upon admission to a hospital casualty department.** *Medical Journal of Australia*, 1970(Oct), Vol. 2(17), 778-781.—Determined over a period of 7 days blood alcohol concentrations in 246 18-65 yr. old patients who were admitted to the casualty ward at a Melbourne hospital. 75 Ss had alcohol in their blood, and of these, 21 had concentrations which exceeded .15 gm/100 ml. Results show the association of certain social factors with positive blood alcohol readings. The relationship of alcohol to auto accidents and other diseases is also detailed.—*Journal abstract.*

10564. Gerson, Irvin M., Friedman, Ronald, & Unterberger, Herbert. (Philadelphia State Hosp., Pa.) **Non-antagonism of antiadrenergic agents by a**

dibenzoxepine: Preliminary report. *Diseases of the Nervous System*, 1970(Nov), Vol. 31(11), 780-782.—Explores possible drug interaction between dibenzoxepine and antiadrenergic antihypertensive drugs. 10 female 63-87 yr. old hypertensive patients, stabilized and maintained on guanethidine, or methyl dopa were treated after a 1-mo observation period with doxepin, administered in divided doses 30 min. before the control doses of the antihypertensive drug was given. EKGs were performed before, during, and after therapy. Results indicate that doxepin produced no significant effect on Ss' blood pressure and did not interfere with the desired hypotensive effects of the other drugs.—*P. McMillan*.

10565. **Hoornaert, F., Pierloot, R., & Vertommen, H.** (St. Rafael U. Hosp., Louvain, Belgium) **Blood pressure responses to stress in renal patients.** *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 178-190.—Compared a group of 6 renal patients showing a rise in blood pressure as a reaction to the announcement of a change in the dialysis program with 11 patients manifesting no rise in blood pressure. Significant differences were found on scales of the Amsterdam Biographical Questionnaire which measured neurotic instability as manifested by the presence of functional somatic complaints and test-taking attitude and in the responses on a questionnaire filled out by the nursing staff. The tendencies which were found in the MMPI seem to point to a lesser degree of neuroticism in the reactor group, whereas their attitude towards the test-taking situation was more defensive. The reactor group was typified by the nursing staff as psychically more balanced, less neurotic, and with less neurosomatic complaints.—*Journal summary*.

10566. **Krones, Peter D.** (U. North Carolina, Chapel Hill) **Level of aspiration and the evaluation of self and others by diabetic and non-diabetic children.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3870-3871.

10567. **Mandy, Stephen & Ackerman, A. Bernard.** (U. Miami, Medical School) **Characteristic traumatic skin lesions in drug-induced coma.** *JAMA: Journal of the American Medical Association*, 1970(Jul), Vol. 213(2), 253-256.—The skin lesions in patients with drug-induced coma are distinctive clinically and histologically. Early recognition of these characteristic lesions may be life saving for the comatose patient. The skin lesions are of 3 types: (a) dusky, erythematous plaques; (b) tense vesicles surmounting erythematous, indurated bases; and (c) large, tense, clear bullae surrounded by a narrow rim of erythema. They are often located over areas of pressure and follow trauma, e.g., results from grappling with restraints placed on an agitated patient. The histological study shows extensive sweat gland necrosis. 2 case studies are presented and discussed.—*Journal abstract*.

10568. **Parkes, C. Murray; Benjamin, B., & Fitzgerald, R. G.** (Tavistock Inst. of Human Relations, London, England) **Broken heart: A statistical study of increased mortality among widowers.** *British Medical Journal*, 1969(Mar), Vol. 1(5646), 740-743.—Followed up 4486 widowers, 55 yr. old and older for 9 yr. since the death of their wives in 1957. Of these 213 died during the 1st 6 mo. of bereavement, 40% above the expected rate for married men of the same age. Thereafter the mortality rate fell gradually to that of married men and remained at about the same level. The greatest increase in mortality during the 1st 6 mo. was found in the widowers dying from coronary thrombosis and other

arteriosclerotic and degenerative heart disease. There was also evidence of a true increase in mortality from other diseases, though the numbers in individual categories were too small for statistical analysis. In the 1st 6 mo. 22.5% of the deaths were from the same diagnostic group as the wife's death. Evidence suggests that this may be a larger proportion than would be expected by chance association, but there is no evidence suggesting that the proportion is any different among widows and widowers who have been bereaved for more than 6 mo. (17 ref.)—*Journal abstract*.

10569. **Passouant, P., Cadilhac, J., Baldy-Moulinier, M., & Mion, Ch.** (U. Montpellier, Medical School, France) **Etude du sommeil nocturne chez des urémiques chroniques soumis à une épuration extrarénale.** [Night sleep in chronic renal insufficiency.] *Electroencephalography & Clinical Neurophysiology*, 1970(Nov), Vol. 29(5), 441-449.—Studied the night sleep of 18 Ss in a state of chronic renal insufficiency by polygraphic recording. It was found that the sleep of chronic uremics was (a) broken up by long periods of insomnia, either grouped in the middle of the night or spread out throughout the whole night and occurring in any stage of sleep; (b) deep slow sleep was diminished; (c) fast sleep was reduced in total quantity but the proportion of fast to slow sleep was normal; (d) sleep cycles were disorganized; and (e) myoclonus and starts occurred in all stages of sleep except during that of deep slow sleep. Extrarenal purification by peritoneal dialysis or by artificial kidney improved the night sleep by regularizing the cycles, decreasing the awakenings, and increasing the deep slow sleep. The action on the myoclonus and starts was incomplete; although decreased, these paroxysms persisted in an abnormal way during sleep. The improvement in the night sleep resulting from dialysis was particularly clear in Ss submitted to periodic hemodialysis, in whom sleep approached normal. Results show a correlation between the increased blood urea and the disturbance of sleep in uremics. (29 ref.)—*English summary*.

10570. **Reisel, J. H.** (100 van Eeghenstr., Amsterdam, Netherlands) **Epidemiological and psychosomatic aspects in essential hypertension.** *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 169-177.—In essential hypertension it is possible to distinguish hypertension from complicated clinical atherosclerotic disease. The latter is prevailing in Western countries, while in non-Western countries a more "pure" hypertension is found, not leading to hypertensive heart disease. A group of 50 hypertensive executives in Holland were examined, where the typical features of the hypertensive personality could be established. Later a group of 50 hypertensive Negroes in the Netherlands Antilles were examined by means of the same methods. Notwithstanding fundamental differences in ethnic and sociocultural respects, the same psychodynamic factors and the same rigid pattern were found and may indicate the predominant significance of conflicts between passive dependency tendencies and overcompensation through aggressive impulses as a trigger for the basic pathophysiological mechanism, even in utterly different sociocultural settings. (19 ref.)—*Journal summary*.

10571. **Schipkowsky, Nikola.** (64 Patriarch Evtimi, Sofia, Bulgaria) **Iatrogenie in der Pädiatrie.** [Iatrogeny in pediatrics.] *Acta Paedopsychiatrica*, 1970(Apr), Vol. 37(4-5), 101-117.—Psychic disorders among children and their parents occasioned by the physician are in

general associated with organic damage brought about by medical procedures due to faulty diagnosis of nonexistent somatic diseases. Kanner has devoted himself to the study of children's iatrogenic diseases, and Van Krevelen has made a contribution to the study of the hazards to parents. Parents, taking the physician's role, "diagnose" perilous diseases and "prognosticate" inevitable death. They may thereby evoke anxiety neurosis of nosophobic or hypochondriac character, pitying the child for real, or usually imaginary diseases. Children become entangled in self-devised "dangers" to their health and life. (18 ref.)—G. Rubin-Rabson.

10572. Spiegel, R. (Medical Research Dept., Basel, Switzerland) **Psychologische Unterschiede zwischen akuten und chronischen Stadien von Rückenbeschwerden: Eine vergleichende Untersuchung mit dem Rorschachtest an zwei Patientengruppen mit rheumatischen Erkrankungen: Spondylitis ankylopoetica und lumbale Discushernie.** [A comparative examination of the Rorschach test in two groups of patients with rheumatic diseases: Ankylosing spondylitis and ruptured lumbar spinal disc.] *Psychotherapy & Psychosomatics*, 1969, Vol. 17(3-4), 207-216.—Presents differences in psychodynamics between acute and chronic stages of the somatization process on the basis of statistical comparison of test results. The nature of object relationships was found to constitute a distinguishing feature: whereas in the case of patients with acute intervertebral disc hernia, object relationships were still intact, those of the patient with chronic ankylosing spondylitis have been largely cast off and transferred to the S's own body-image. Some correlations between these findings and clinical knowledge and psychodynamic concepts are discussed.—English summary.

10573. Takahashi, Kazuro & Fujitani, Yoshiko. (Tottori U., Medical School, Yonago, Japan) **Somatosensory and visual evoked potentials in hyperthyroidism.** *Electroencephalography & Clinical Neurophysiology*, 1970(Dec), Vol. 29(6), 551-556.—Studied somatosensory evoked potentials (SEPs) and visual evoked potentials (VEPs) in 14 hyperthyroid patients and 45 controls. Results indicate that amplitudes of each component of the SEPs and VEPs were greater in hyperthyroid Ss than in controls. No significant changes were observed in the peak latencies of each component of the SEPs, except a slight prolongation in the latency of the initial negative wave of the VEP in hyperthyroidism. The threshold of the SEPs in hyperthyroidism showed no significant changes, but on an increase in the stimulus strength, the amplitudes of the potentials increased much more abruptly in the hyperthyroid Ss and reached a maximum at the motor threshold. The topographical distribution of the primary response of the SEP in all Ss was similar. No significant correlations were observed between the amplitude of the primary response in the SEP and each value of basal metabolic rate, ¹³¹I-uptake, and resin sponge uptake. It is concluded that the cerebral evoked potential may be useful in the diagnosis of hyperthyroidism. (French summary) (16 ref.)—*Journal summary*.

10574. Welford, A. T. (U. Adelaide, South Australia) **Mental integrity and the nature of life.** *Medical Journal of Australia*, 1970(Jun), Vol. 1(23), 1135-1138.—Raises the problem of how far maintaining the survival of patients with terminal illnesses whose mental powers are gravely impaired, competes with the medical treatment of patients who can expect to recover fully. The human

and religious consequences of defining life in terms of mental integrity are discussed, especially regarding the senile and seriously defective infants.—*Journal abstract*.

COMMUNITY SERVICES

10575. ———. **Psychiatry and the community.** *Medical Journal of Australia*, 1970(Jun), Vol. 1(23), 1131-1132.—Comments on the recently published symposium proceedings "Psychiatry and the Community." The papers suggest that it will be more economical for the community (a) to invest in the helping professions rather than large institutional buildings, and (b) to focus on outpatient care.—M. West.

10576. Crawford, Ronald L. (Yale U.) **Pathways to the psychiatrist: A study of working and lower class admissions to a community psychiatric facility.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1902.

10577. Denison, John M. (Box 40, Mt. Albert, Ontario, Canada) **An unusual social experiment to help youth in crisis (Ankh).** *Canadian Medical Association Journal*, 1971(Jan), Vol. 104(1), 15-19.—Describes the establishment and operation of a crisis intervention service in a semirural community serving a population of 75,000 within a 20-mile radius. The service developed as a community project in response to the mounting problem of drug abuse by youth. Workers are drawn from within the peer group being served, and the service is deliberately client-oriented. Significant features behind its success are described. Evaluation on a cost-effectiveness basis shows considerable saving in terms of both financial and professional time. (French summary)—*Journal abstract*.

10578. Kolb, Lawrence C. **Community mental health centers: Some issues in their transition from concept to reality.** *Hospital & Community Psychiatry*, 1968(Nov), Vol. 19(11), 335-340.—Discusses 4 issues which must be resolved by those who are bringing community mental health centers from hope to reality. These issues involve (a) effective communication with patients and their families concerning services available at a center, (b) sufficient manpower to maintain existing commitments and support projected new local services, (c) difficulty of offering mental health services limited by geographic catchment areas, and (d) sufficient psychiatrists to provide leadership to citizen groups concerned with helping to plan and direct their local mental health centers.—B. A. Burkard.

10579. Lamb, H. Richard & Mackota, Cecile. (County Mental Health Services Div., San Mateo, Calif.) **Vocational services in a community mental health program.** *Hospital & Community Psychiatry*, 1968(Oct), Vol. 19(10), 315-318.—Describes the vocational services of a county health department geared to the needs of the psychiatric patient. A sheltered workshop was set up several miles from the hospital for the 10% of the clients who require this service. The special needs of the mentally ill are discussed, and the techniques needed to provide a good vocational service are detailed. Defining staff roles and understanding the concept of limited goals were 2 of the problems faced in the early operation of the program.—B. A. Burkard.

10580. Lecker, Sidney. (Montreal Children's Hosp., Mental Assessment & Guidance Clinic, Quebec, Canada) **Coping with drug abuse: II. An indigenous multidisciplinary clinic for youth.** *Canada's Mental*

Health, 1970, Suppl. No. 64, 7-12.—Describes an 18-mo-old youth clinic established because of the large numbers of alienated youth living in the city, known to have medical and psychiatric problems, but unable or unwilling to seek help from existing institutions. The main role of the clinic coordinator was to respond to the needs of the youth and coordinate these with the demands of medical and other therapeutic services. A continual revision of services occurred with an expansion of psychiatric services, and a shift in emphasis from a 1-1 model to group therapy. Utilization of the patient's community milieu in the therapeutic process was an innovative feature. Medical students and residents played a major role in planning and delivery. The response of community institutions was hesitant, but later constructive and enthusiastic. The future functions of the clinic will be divided among youth, detached workers, and medical staff with central coordination and administration by the YMCA.—*Journal summary*.

10581. Leonard, Alvin R. & King, Esmer S. (Berkeley Public Health Dept., Calif.) **Involving public health nurses in mental health care: I. Work with patients and families before and after discharge.** *Hospital & Community Psychiatry*, 1968(Oct), Vol. 19(10), 321-324.—Describes a public health department program using the skills of public health nurses in community mental health. A program with a local hospital is outlined, in which the public health department is notified of admissions and discharges of patients. As a result they can pave the way for releasing patients and giving aftercare.—*B. A. Burkard*.

10582. Levinson, Daniel J., et al. (Connecticut Mental Health Center, New Haven) **The community mental health center in urban crisis.** *Journal of the Fort Logan Mental Health Center*, 1968(Fal), Vol. 5(2), 51-60.—Presents the report of a committee which examined the August 1967 racial disturbance in New Haven and the role played in it by the Connecticut Mental Health Center. An analysis of the history and functions of the Center is presented. Structural changes were considered necessary for the Center to extend its activities beyond clinical services to a more genuine involvement in the community. Possible goals, programs, and requirements for organizational change are outlined. It is suggested that the report provides a framework which may be useful to other organizations faced with similar issues.—*Journal summary*.

10583. MacKay, Mary N. & Serrano, Alberto C. (Galveston County Health Dept., La Marque, Tex.) **Involving public health nurses in mental health care: II. Crisis intervention for troubled families.** *Hospital & Community Psychiatry*, 1968(Oct), Vol. 19(10), 324-326.—Describes a program in which public health nurses work with recipients of maternal and child health who display problems that will respond to psychiatric crisis-intervention techniques. A case history illustrating how a public health nurse can work effectively with a disturbed family is included.—*B. A. Burkard*.

10584. Mickleburgh, W. E. (Community Mental Health Center, Parkside, South Australia) **Long-stay psychiatric hostels run by private enterprise in South Australia.** *Medical Journal of Australia*, 1970(Jun), Vol. 1(25), 1257-1261.—Describes a system of 21 hostels, run by private enterprise, catering for 377 people with chronic psychiatric disorders in South Australia. The service is patient-centered. The roles of private interest, government, and voluntary service agencies are exam-

ined. An analysis of the residents revealed that 2/3 suffered from psychoses and required moderate to intensive care; average age was 55 yr. Descriptions of the services and of the economy of the hostels are provided. Policies and trends resulting from 5 yr. experience in the development of the hostel system are discussed.—*Journal abstract*.

10585. O'Connor, Alice L. (California State Dept. of Social Welfare, San Francisco) **A creative living center for the mentally ill.** *Social Casework*, 1970(Nov), Vol. 51(9), 544-550.—A community based program grew out of recognition of a need for social and group activities for former mental hospital patients. No public funds were available, and requests to private sources were unsuccessful. The program was launched by services donated by social workers and space provided in a church. The center has been in operation over a year with a small but regular attendance.—*M. W. Linn*.

10586. Yurcta, A. (Psychiatric Outpatient Clinic, Lachute, Quebec, Canada) **A psychiatric home visiting service.** *Canada's Mental Health*, 1970(Nov), Vol. 18(6), 4-7.—Describes the development of a home visiting service and attempts to establish whether such visits contribute to prevention. Over a 2-yr period, 2 teams met with 41 family units, interviewing approximately 200 family members of all ages. The teams found that (a) they were accepted by the community at large as they became known, (b) home visits helped to clarify the clinical picture, (c) approximately 55% of the patients welcomed the idea of being visited, (d) complete refusal was shown by 5% of the patients, (e) clinical improvement was noted in over 70%, (f) 17% failed to respond to home visits, and (g) home visits enabled a higher proportion of persons to be treated.—*M. West*.

GERIATRICS

10587. ———. **Old age, nutrition, mental confusion.** *British Medical Journal*, 1969(Sep), Vol. 3(5671), 608-609.—In recent years more elderly people have become mentally confused, possibly caused by either a sudden bereavement, or an acute infection, e.g., pneumonia or a urinary tract infection. The patient's drug therapy should be reviewed, since the barbiturates, antidepressants, and digitalis are common causes of confusion. Inadequate nutrition might be suggested by the general appearance of the patient or by the dietary history. In most patients with mental symptoms due to B12 deficiency, changes will be found in the peripheral blood count. Dementia due to folate deficiency should be considered, if an elderly mentally disturbed patient has a history suggestive of nutritional deficiency. Potassium deficiency may occur in a patient prone to muscle weakness, apathy, and depression. However, the common causes of mental confusion are not of dietetic origin. It is concluded that causes, e.g., past history of gastrectomy, and the mental and social state of the patient must be considered.—*I. Halev*.

10588. Bower, H. M., Andrews, J. T., & Pope, R. A. (Mental Hosp., Kew, Victoria, Australia) **Dementia and cerebral blood flow.** *Medical Journal of Australia*, 1970(Jan), Vol. 1(5), 207-211.—Supports the hypothesis that dementing processes are accompanied by a decline in cortical blood flow. 10 60-70 yr. old Ss were interviewed via a questionnaire which assessed reality testing, affect, overt behavior, memory, orientation, and communication; Verbal and Performance sections of the

WAIS were also given. No correlation between degree of dementia and rate of blood flow could be established. The clinical picture of the dementia was not necessarily reflected in the degree of intellectual deficit, measured by the WAIS. Although EEG studies and postmortem plaque counts are now widely employed in an attempt to assess dementia, cerebral blood flow and cerebral rate of oxygen consumption may be more important measures of the dementing process.—*Journal abstract.*

10589. Burvill, P. W. (U. Western Australia, Perth) **Geriatric and psychogeriatric patient requirements in Perth, Western Australia.** *Medical Journal of Australia*, 1970(Jan), Vol. 1(5), 236-240.—In Perth, Western Australia, the number of elderly patients in various types of long-term care facilities is 3 times the figure advocated for Britain's needs. Reasons for this are discussed. A proposal is made for a system of categorizing elderly patients requiring long-term accommodation, placing emphasis on the patients' mobility and capacity for self-care in the ward setting, and ignoring distinctions between medical and psychiatric illness. Using this system, it is estimated that 3.8 hospital/nursing home beds/1000 of the total population in the metropolitan area are sufficient to cater for the inpatient needs of the elderly. The needs of psychogeriatric patient care in Perth are discussed. Details are outlined of a proposed psychogeriatric service based on the major general teaching hospitals, but administered as a separate division of the State Mental Health Services. (31 ref.)—*Journal abstract.*

10590. Sloane, R. Bruce & Frank, Diana. (Temple U., Medical School) **The mentally afflicted old person.** *Geriatrics*, 1970(Mar), Vol. 25(3), 125-132.—Asserts that it is more the social attitudes and mores that prevent the provision of optimal care for the emotional disturbances of old age than the lack of knowledge of what best to do. The newer social measures, e.g., Medicare may well provide the catalyst to change such attitudes and reduce hospital admissions. Varieties of mental disturbance are discussed. (18 ref.)—*Journal summary.*

10591. Sourander, L., Ruikka, I., & Rautakorpi, J. (City Hosp., Turku, Finland) **Psychological methods applied to evaluate symptomatic geriatric treatment.** *Geriatrics*, 1970(Aug), Vol. 25(8), 124-137.—Studied the performance of 49 geriatric patients by means of 3 tests—RT, sense of balance, and perception of vertical and horizontal with body tilt. Ss were treated with a combination of dicyrazine and inositol nicotinate in a double-blind study. The performance of the Ss was improved by the treatment. In particular, the sense of balance was significantly improved in both sexes.—*Journal summary.*

EDUCATIONAL PSYCHOLOGY

10593. Bracht, Glenn H. (Southern Illinois U.) **Experimental factors related to aptitude-treatment interactions.** *Review of Educational Research*, 1970(Dec), Vol. 40(5), 627-645.—It seems that the 2 major factors in the occurrence of aptitude-treatment interactions are the

nature of the alternative treatments and the selection of personological variables. To be differentially effective for various types of students, the alternative treatments should demand different abilities for successful performance. Aptitude-treatment interaction is more likely to occur when 2 personological variables have been included in the experimental design. The real test for the concept of this interaction will come as more Es use process analysis for developing alternative treatments. (5 p. ref.)—*P. D. Leedy.*

10599. Gregg, Davis W. (American College of Life Underwriters, Bryn Mawr, Pa.) **Brighter lamps for learning.** *Journal of the American Society of Chartered Life Underwriters*, 1969(Apr), Vol. 23(2), 37-40.—Describes the Adult Learning Research Center being established at Bryn Mawr. The center will seek improved learning techniques and procedures through research of the adult learning process and develop a practical output of learning tools and techniques.—*M. West.*

10600. Guyot, Y. (Ecole Normale Supérieure, Lab. of Psycho-Pedagogie, St. Cloud, France) **Espace pédagogique et relations professeur-etudiants.** [A study of staff-student relations.] *International Review of Applied Psychology*, 1970(Oct), Vol. 19(2), 161-171.—The main hypothesis was that the spatial distance that the student sets between himself and his teacher (by refusing to occupy the front row of the lecture room) indicates a psychological distance, a need to stand apart from the teacher. The questionnaire method was used in an attempt to define concepts of "distance." Results indicate that "scholastic space" is valent in different parts of different affective values. 81% considered that being near the rostrum produces maximum profit from the lecture but the front row is commonly excluded. There is an "ideal" distance from the rostrum but the "fear of the lecturer" establishes a "critical distance." Group pressure inhibits those who would like to get closer to the rostrum. The thirst for human contact, the fear of isolation, the need to be seen by the teacher, and the desire not to be overlooked are frequently mentioned. It is concluded that students are motivated by various fears: fear of face-to-face contact and fear of alienation from other members of the group or of total exclusion from the group.—*L. A. Ostlund.*

10616. Treffinger, D. J., Feldhusen, J. F., & Thomas, S. B. (Purdue U.) **The relationship between teachers' divergent thinking abilities and their ratings of pupils' creative thinking abilities.** *Measurement & Evaluation in Guidance*, 1970, Vol. 3(3), 169-178.—The Torrance Tests of Creative Thinking (TTCT) were administered to 38 elementary school teachers and their pupils. Each teacher rated his pupils' creative thinking ability, using a 5-category, forced normal distribution procedure. When pupils' test scores were used as criteria,

substantial differences among teachers in ability to rate their pupils' appeared. Teachers' ratings of pupil creativity correlated no higher, and often significantly lower, with pupils' TTCT scores than with their IQ scores. This held true regardless of whether teachers were themselves high or low on divergent thinking. Teachers' divergent thinking scores are positively related to their pupils' scores of tests of divergent thinking. *S. M. Amatori.*

ATTITUDE & ADJUSTMENT

10618 Beard, Eugene. (U. Maryland) The ethnic identity of the classroom instructor as a factor in changing anti-Negro attitudes of white college students. *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1064.

10619 Bruden, Marcia, et al. (U. Kansas) Effects of teacher attention on attending behavior of two boys at adjacent desks. *Journal of Applied Behavior Analysis*, 1970(Jul), Vol. 3(1), 199-201.—Obtained base-line records of the appropriate attending behavior of 2 boys described as the most disruptive pupils in a 2nd grade classroom in a poverty area school. In Exp. I, the teacher systematically increased the amount of attention for appropriate attending in S. This resulted in a dramatic increase in his attending rate and a lesser, though significant, increase in attending behavior of S. In Exp. II systematic attention for attending was instituted for S, and was discontinued for S. This resulted in further increases in attending by S, and a reduction in attending by S. A brief withdrawal of reinforcement for attending in both Ss reduced attending levels for both. Following this reversal appropriate attending in both Ss was systematically reinforced and attending returned to high levels. *Journal abstract.*

10621 Caruso, Jerry S. & Ryan, Frank J. (U. California, Riverside) Levels of cognitive functioning as related to anxiety. *Journal of Experimental Education*, 1969(Sum), Vol. 37(4), 1-20.—Investigated the relationship between levels of cognitive functioning as suggested by B. A. Mussen's *Latency of Educational Achievement, Handbook I: Cognitive Domain* and states of affective arousal as measured by test anxiety (the main principle of children's general anxiety and need for achievement). For a university sample ($N = 244$) significant negative correlations between test anxiety and knowledge (total, of specific facts) and test anxiety and comprehension were found. For a high school sample ($N = 319$) the negative correlation between test anxiety and comprehension was significant. No significant relations between test anxiety and higher levels of cognitive performance were found. Results are discussed in terms of interfering effects to task performance that test anxiety may produce when the examinee is given no information to work with and must rely essentially on memory. *Journal abstract.*

10627 Dellas, Marie & Gaier, Eugene L. (State U. New York, Buffalo) Modes of conformity of freshman women at differently oriented colleges. *Journal of Educational Research*, 1969(Apr), Vol. 62(8), 370-374.

Compared 3 samples of female freshmen students, 1 each from a major public university; a private, sectarian girls' college, and a community college, with respect to D. Riesman's hypothesis of inner- and other-directedness. 139 Ss listed 3 each of their greatest personality assets and liabilities. No significant differences in student responses of self-perceived personality traits were revealed with respect to institution. There was a significant difference regarding their perceptions of these variables. All Ss placed a high premium on good interpersonal relations and accorded minimum emphasis to traditional character traits and achievement. Data suggest that all Ss may be other-directed with respect to group interaction. Other-directedness appears more salient in the undergraduates with their direction by mass media. The community and sectarian college samples appear to represent the other-directed character type with overlapping inner-directed traits. *Journal abstract.*

10629 Dunn, Charleta J. (U. Houston) An analysis of the personal characteristics of deprived youth in a school desegregation institute. *Journal of Negro Education*, 1970(Fal), Vol. 39(4), 289-295.—Attempted to accumulate knowledge about the relationship between desegregation and the teaching-learning process in the elementary and secondary schools and at producing a cadre of professional teachers committed to teaching in a totally desegregated school situation, through an extensive tutoring experience in human relations and educational innovation. 40 experienced teachers were chosen from among 600 who had attended a special institute on school desegregation, and 10 Negro and 10 Anglo student teachers were also chosen. 200 8-14 yr. old children from an economically deprived area, predominantly Negro, were used. 20 groups of children were formed, with a teacher-pupil ratio of 1:3 or 1:4. Students were administered the Semantic Difference

Questionnaire, the Reading Attitude Scale, and the Mathematics Attitude Scale before and after the commencement of the program. The differences found are not aligned to racial descent. All the students involved tended to have a very negative attitude toward themselves and others, and while they did not get along well with others, their disagreements were not racial.—S. R. Diamond.

10632. Hamil, Thomas A. (U. Washington) **A cross-sectional examination of commitment to visual stereotypes, attitudes, and information about specific ethnic groups.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1686-1687.

10633. Harris, Edward E. (Indiana U., Indianapolis) **Personal and parental influences on college attendance: Some Negro-white differences.** *Journal of Negro Education*, 1970(Fal), Vol. 39(4), 305-313.—Assessed the relevance of personal and parental influences on college attendance by employing reported influences on the decision to attend college. The total sample included 660 junior and senior college students. Respondents were asked whether their parents, some relative, or a person who helped raise them influenced their decision to enter college, and whether the decision was influenced by strong personal desires. The socioeconomic background was measured by the Duncan Socio-Economic Index. The parental educational level was ascertained. The investigations revealed that Negro Ss were more likely to attend college on the basis of personal influences. Larger proportions of reported parental influence were found among high status males and females and low status Negro males and females. Higher proportions of personal influence as contrasted with parental influence existed among Negroes. It is assumed that the relatively low status of Negroes explained these differences.—S. R. Diamond.

10634. Heilbrun, A. B. (Emory U.) **Adjective Check List correlates of social conflict problems in college students.** *Measurement & Evaluation in Guidance*, 1970, Vol. 3(3), 158-163.—43 male and 44 female undergraduates who requested service during the 1968-1969 academic year at the Emory University Psychological Center were the Ss in a study which sought to distinguish between clients who admitted to social alienation as a primary or secondary problem and clients who denied the importance of this problem. The investigation sought to determine whether the Adjective Check List (ACL) could be used at a 2nd level of precision (i.e., problem identification) beyond its ability to discriminate between maladjusted and adjusted students. 7 of the 8 ACL predictions were supported. Scores on scales measuring affiliation and heterosexuality and an affiliation minus succorance index differed significantly for the problem and no-problem groups, men and women. Succorance scale differences were found for women only.—S. M. Amatora.

served on or appeared before judiciary boards. *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2106-2107.

10636. Hodgkins, Benjamin J. & Stakenas, Robert G. (Florida State U., Inst. for Social Research) **A study of self-concepts of Negro and white youth in segregated environments.** *Journal of Negro Education*, 1969(Fal), Vol. 38(4), 370-377.—Hypothesized that no significant differences would be found between segregated Negro and white Ss on a self-concept measure. 139 Negro and 100 white Ss of high school and college age attending racially segregated Southern schools completed a questionnaire on social origin and a semantic differential test of self-concept. It was found that (a) significant differences existed in self-adjustment and self-assurance in the school situation, with Negroes tending to score higher than whites; (b) when social status was controlled within race, difference was not maintained; and (c) Negro females scored higher than white females, while the higher scores of the Negro males were not significantly above that of white males. Possible explanations of the findings and implications for racial relations are discussed. S. Knapp.

10646. Noesjirwan, Jennifer. (National Assessment of Education Project, Djakarta, Indonesia) **Attitudes to learning of the Asian student studying in the West.** *Journal of Cross-Cultural Psychology*, 1970(Dec), Vol. 1(4), 393-397.—It was hypothesized that the Asian student is more dependent on authority, less able to think independently, and more dependent on memorization. A questionnaire measuring this attitude was administered to Asian and Australian students. Of the 3 factors extracted, the 1st 2 described these attitudes and discriminated between the 2 groups.—A. Krichev.

10647. Permaul, Jane S. (U. California, Los Angeles) **Behavioral differences among selected organized student groups.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1588.

10648. Phillips, Romeo E. (Kalamazoo Coll.) **Student activities and self-concept.** *Journal of Negro Education*, 1969(Win), Vol. 38(1), 32-37.—Examined the relationship between participation in student activities and scores on a self-concept measure. 81 male and 107 female 12th graders from a suburban high school with an 80% Negro population were tested with the Osgood Semantic Differential. Ss completed an activity checklist and an evaluation of their activities. Activity advisors checked the 10% most, average, and least successful in the activities. Results indicate that (a) self-concept is significantly related to participation for boys but not for girls, (b) nonparticipants had high self-concept scores, and (c) there was no correlation between Ss selection of an activity as most helpful and advisors evaluation of their success. It is concluded that for nonparticipants variables other than activities are instrumental in the development of self-concept, and the activities most selected as helpful are those giving the participants public exposure.—S. Knapp.

10649. Ramirez, Manuel; Taylor, Clark, & Petersen, Barbara. (U. California, Mexican-American Studies, Riverside) **Mexican-American cultural membership and adjustment to school.** *Developmental Psychology*, 1971(Mar), Vol. 4(2), 141-148. Administered to 300 Mexican-American and 300 Anglo-American junior high and high school students of the lower-socioeconomic class an attitudes toward education scale and a projective technique consisting of pictures for which they constructed stories (School Situations Picture Stories Test). Results show that Mexican-Americans had expressed views toward education which were less positive than those of the Anglo-Americans. On the projective technique, Mexican-Americans scored higher on n power and n rejection and lower on n achievement than Anglo-Americans. Mexican-American males scored higher on n succorance toward females and on n aggression toward females who were domineering than

Anglo-American males. Mexican-American females scored higher on n autonomy than Anglo-American females. Findings are interpreted as being the result of differences between the value orientations of the Mexican-American and Anglo-American ethnic groups.—*Journal abstract.*

10670. Johnson, Roger E. (U. South Florida) **The validity of the Clymer-Barrett Prereading Battery.** *Reading Teacher*, 1969(Apr), Vol. 22(7), 609-614.—The Clymer-Barrett test did a better job of predicting reading readiness as measured by the Gates-MacGinitie tests than did the Metropolitan Readiness Tests. However, that is no assurance that the results would be the same in another locale or under different testing conditions. The Clymer-Barrett test does not favor either boys or girls,

however, older children did better as a group than did younger children.—P. D. Leedy.

10671. LaVigne, John A. (Columbia U.) **Differences between predicted and actual achievement test scores as an output criterion of secondary schools.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1543.

10672. Lovegrove, Malcolm N. (Soche Hill Coll. Limbe, Malawi) **The establishment of a regional testing and training centre in Africa.** *International Review of Applied Psychology*, 1970(Oct), Vol. 19(2), 173-174.—Because there is a need for educational facilities and a desire to cooperate among some African nations, the United States Agency for International Development has provided funds for the establishment of a regional testing resources and training centre, for Botswana, Lesotho, Malawi, and Swaziland. The Centre will have its headquarters at the University of Malawi with a branch in Botswana. The priorities are: (a) develop and implement tests designed for pupil selection into secondary schools, (b) advise administrators of education in these countries and the 2 universities on the development and effective use of testing programs for their educational system, and (c) develop a system of testing to supplement existing Public Service selection and perform a similar function for the private sector. Fortunately, Malawi has a very favorable attitude toward modern testing procedures. For example their Primary School Learning Examination is taken by approximately 30,000 pupils at the end of 8 yr. of schooling and is used as a measure of proficiency as well as a selection device for the 3000 secondary school places in the country. However, the "traditional" verbal-type test has not been included in the battery. Further experimentation will determine whether or not an omnibus verbal intelligence test would improve prediction.—L. A. Ostlund.

Remedial Education

10689. Blau, Harold; Schwalb, Eugene; Zanger,

Eugene, & Blau, Harriet. (Long Island Reading Inst., Jamaica, N.Y.) Developmental dyslexia and its remediation. *Reading Teacher*, 1969(Apr), Vol. 22(7), 649-653, 669.—Summarizes findings in 12 individuals with developmental dyslexia and 1 history in detail. Results suggest that (a) developmental dyslexia is demarcated from other reading problems, (b) the possibility exists that learning to read may be obstructed instead of helped by the uncritical and rigid incorporation of the visual modality at all times in the learning pattern of every individual; and (c) modality blocking suggests that there may be more opportunities for the specific treatment of reading and other deficiencies than have been suspected.—P. D. Leedy.

10690. Evans, James R. (Polk State School & Hosp., Pa.) Auditory and auditory-visual integration skills as they relate to reading. *Reading Teacher*, 1969(Apr), Vol. 22(7), 625-629.—Impaired auditory acuity, especially for higher frequencies, appears to be somewhat associated with retardation in reading. Auditory discrimination abilities may be particularly important in development of a slight vocabulary. There seems to be enough evidence to warrant attention to auditory functions in remedial or readiness classes. Correlations between various auditory skills and reading achievement do not, however, indicate causal relationships.—P. D. Leedy.

10691. Fried, Gloria E. (Trenton Public Schools, N.J.) A learning center approach to language improvement. *Reading Improvement*, 1970(Fal), Vol. 7(2), 51-53.—Describes a learning center where the key emphases were language and experience. 92 2nd graders with reading deficiencies were Ss. The learning center was planned around 3 important language arts emphases: conversation, storytelling, and the language-experience arts. Paraprofessional assistance was utilized as well as team teaching. Early results evaluated by individual interview and standardized test achievement indicate that the center is doing an exceptional job in meeting the reading deficiencies of the pupils.—P. D. Leedy.

10692. Holcomb, Larry W. (U. Oregon) The effects of hypnosis on the reading remediation of seventh grade boys. *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2007-2008.

10693. Hunsaker, Don E. (U. Oregon) The effects of hypnosis on the reading remediation of seventh grade boys. *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1075-1076.

10694. Krippner, Stanley. (Maimonides Medical Center, Bronx, N.Y.) Reading improvement and its correlates. *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 727-731.—Investigated the relationship of certain variables to improvement in a remedial program. Over a 3-yr period, 3 summer reading clinics were held at a diagnostic center. California Reading Test (Form X or W) was administered to children during their 1st day at the clinic while an alternate form was administered on the last day. 10 additional variables were correlated with the improvement noted. During the 1st year of the clinic, 2 significant correlations were observed between reading improvement and total percentile on the Mental Health Analysis and between reading improvement and the WISC Verbal IQ. During the 2nd year, remediation strategies were shifted and a significant relationship emerged with WISC Performance IQ. For the 3rd year, remediation strategies again shifted and another significant relationship with the Mental Health Analysis was

noted. It was found that attention to low verbal intelligence and to poor mental health appeared to reduce the relationship between these factors and reading improvement. A follow-up analysis of results is described. (22 ref.)—*Journal abstract*.

10695. Linder, Ronald & Fillmer, Henry T. (U. South Florida) **Auditory and visual performance of slow readers.** *Reading Teacher*, 1970(Oct), Vol. 24(1), 17-22.—Attempted to determine the comparative effectiveness of auditory, visual, and simultaneous auditory-visual presentations in 2nd grade Negro boys who were poor readers. A rotation design was devised which balanced all combinations and sequences of task, modality, and subject. Individual children in this study did demonstrate a preference for 1 modality over another. Not all pupils may be expected to learn more effectively from 1 single type of presentation to the exclusion of the other.—P. D. Leedy.

10717. Buktenica, Norman A. (George Peabody Coll.) **Perceptual screening: Toward identification, prediction and prevention of reading disabilities.** *Bulletin of the Orton Society*, 1970, Vol. 20, 72-80.—Describes 3 approaches to diagnosing reading disabilities: medical-neurological, sociopsychological, and psychophysiological. Perceptual developments were advanced as a key to acquisition of reading skills. The adequacy of these various screening procedures was described as less than ideal, and alternative techniques proposed. It is suggested that a study of the modality concept might facilitate the identification and correction of the reading disability. It is concluded that while it is accepted that there exists an optimal period for perceptual development of reading skills, it has not been established which is more beneficial (a) directing instruction to the weak perceptual area; or (b) strengthening the healthy, developing perceptual area.—C. O'Donnell.

10719. Elliott, Raymond N. (Pennsylvania State U.) **Meaningfulness in school tasks for EMR children.** *Journal of Special Education*, 1970(Spring), Vol. 4(2), 189-197.—Investigated the influence of meaningfulness on the acquisition and retention of a school-like task by educable mentally retarded and normal children. Retarded Ss and normals matched for CA and MA were given either a meaningful or nonmeaningful task to learn. Original learning and retention after 30 days were measured. Results indicate that (a) meaningfulness increased performance in original learning for all groups, (b) meaningfulness was more important for retardates than for normals matched for CA in original learning, and (c) retardates did significantly better in the retention task with high meaningfulness than normal Ss matched for MA. It is suggested that the classroom teacher can facilitate learning for both retardates and normals by incorporating familiar cues into the material to be learned. (27 ref.)—L. M. Glidden.

10724. Grzywak-Kaczyńska, Maria & Walesa, Czesław. **Wpływ uczenia na przyspieszenie rozwoju zdolności logicznych u dzieci.** [Influence of teaching on the acceleration of the development of logical faculties by children.] *Roczniki Filozoficzne: Annales de Philosophie*, 1969, Vol. 17(4), 79-97.—Describes learning as being either logical, mechanical, or based on trial and error: the theoretical assumption developed by Jean Piaget served as a basis for this assertion. 196 4-7 yr. old normal children and 45 retarded pupils in the 1st and 2nd grades of a public school served as Ss. Ss were divided into a basic group, which was to be taught, and a control group, which was not to be taught. Ss were taught daily in groups of 5 for 6 days in 20-min lectures. All Ss were tested at the beginning and end of the experiment and a mo. later. After completion of teaching, all basic group Ss had made statistically significant progress. Certain minimal differences appeared in the disadvantaged 4-yr-old Ss. It is concluded that in addition to the training, the level of maturation is equally important. (English summary)—I. Holowsky.

10729. Knight, Octavia B. (North Carolina Coll.) **The self concept of Negro and white educable mentally retarded boys.** *Journal of Negro Education*, 1969(Spring), Vol. 38(2), 143-146.—Investigated differences in self-concepts of 40 educable mentally retarded (EMR) Negro boys and 43 EMR white boys in special classes matched for IQ, MA, CA, and socioeconomic status. Ss stated 3 things they liked best, 3 things they did not like about themselves, and how well they liked themselves. Responses did not reveal any significance. Analysis of the variables of the mothers' and fathers' education and fathers' occupation did not reach significance. Societal expectations as a factor accounting for the results are discussed.—S. Knapp.

10730. Mann, Philip H. (U. Miami) **Modifying the behavior of Negro educable mentally retarded boys through group counseling procedures.** *Journal of Negro Education*, 1969(Spring), Vol. 38(2), 135-142.—Examined the effect of group counseling on the self-concept, anxiety, academic performance, deportment, and attendance of educable mentally handicapped boys with attention to the variables of age, IQ, and race. 36 9½-14 yr. old boys, 12 white and 24 Negro, with IQs of

56-80 were tested with the Children's Self Concept (CSC) scale, the Way I Feel About Myself (WIFAM) scale, the CMA scale, the WISC, and rated in academic performance, attendance, and deportment by their teachers. 18 Ss were divided into 3 racially mixed subgroups for 12 1-hr counseling sessions, while the control group had a study session. Results show (a) improved self-concept on the CSC scale, but not on the WIFAM scale, (b) reduction of anxiety, (c) improvement in deportment, (d) academic improvement, and (e) no significant difference in attendance. Age and IQ were not significant. Negroes showed greater gains than whites in reading, attendance, and reduction of anxiety. It appears that early counseling of Negro children might reduce the number of placements in special classes. (23 ref.)—S. Knapp.

Emotional Disorder

10744. Glavin, John P. & DeGirolamo, Grace. (Temple U.) **Spelling errors of withdrawn and conduct problem children.** *Journal of Special Education*, 1970(Spr), Vol. 4(2), 199-204.—Performed 2 studies analyzing the spelling errors of emotionally disturbed children. In Study I, disturbed children and normals were given spelling tests. Errors were categorized into external errors (additions and omissions of letters, phonetic errors, and substitutions and reversals of letters) and internal errors (words refused or not completed, and unrecognizable spelling). Results show that adjustment class Ss made more internal errors than normals. Study II used conduct problem children, withdrawn children, and normals. Adjustment class Ss made significantly more total and external errors of omission and substitution than regular class Ss. Results approached significance for internalized errors of words refused, and unrecognizable spelling for the adjustment class Ss. Within the adjustment class, the withdrawn Ss made significantly more unrecognizable spelling words, while the conduct problem Ss made significantly more refusals. (18 ref.)—L. M. Glidden.

Alabama) **Effects of contingent and noncontingent token reinforcement upon classroom performance.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 903-908.—Exposed 5 boys attending a therapeutic summer camp to 1½ hr. of programed instruction in mathematics/day for 28 days. Following an 8-day base-line period during which no tokens were given, the awarding of tokens was made contingent upon classroom productivity. After 10 days of contingent reinforcement, Ss received noncontingent tokens for 3 days after which for 7 days tokens were again contingent upon classroom

performance. The token-incentive program was effective in controlling classroom productivity. Results from the Iowa Test of Basic Skills, a standard achievement test, indicate concurrent academic gains in arithmetic but no gains in a subject (language) in which no instruction was received.—*Journal abstract*.

10761. Danish, Steven J. & Kagan, N. (Southern Illinois U., Counseling & Testing Center) **Measurement of affective sensitivity: Toward a valid measure of interpersonal perception.** *Journal of Counseling Psychology*, 1971(Jan), Vol. 18(1), 51-54.—Evidence from former experimental and field studies suggests that the Affective Sensitivity Scale reflects personal growth in interpersonal sensitivity. The instrument was responsive to experiences of an intensive nature (a T-group laboratory), and to experiences of less intensity but of longer duration (year-long National Defense Education Act Counseling and Guidance Institutes). However, scores on the instrument did not change significantly as a result of retesting with 65 17-60 yr. old volunteers or a placebo treatment. If differential experiences were involved, the instrument reflected different amounts of change among different groups. This suggests that the Scale which attempts to measure affective sensitivity may meet some of the necessary conditions to measure personal growth in counselor training programs, T-group experiences, or other planned experiences designed to improve interpersonal sensitivity.—*Journal abstract*.

seling by school personnel: An economical model of intervention. *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 175-182.—Investigated the feasibility of utilizing currently available school personnel as the behavior analysts in an attendance counseling program. An attendance counselor contacted adults (mediators) who controlled reinforcers for 6 9th grade male chronic nonattenders (targets); agreements (deals) were made between mediators and targets that reinforcers would be provided, contingent on school attendance. Absence of the Attendance Counselor from school for a 2-wk period constituted a reversal condition, after which the deals were reinstituted. Results show a significant increase over base line in school attendance during the time in which deals were in effect. Study 2 involved 20 high school chronic nonattenders for whom deals were arranged as in Study 1 (contingency counseling), and 15 high school nonattenders provided more traditional attendance counseling (contact counseling). Contingency counselors achieved results similar to those achieved in Study 1. An experienced contact counselor did not achieve improved school attendance among her group.—*Journal abstract.*

10825. Swisher, J. D. (Pennsylvania State U.) **Counselors in conflict.** *School Counselor*, 1970, Vol. 17(4), 272-279.—The study involved 28 schools and 1450 teachers, 50 administrators, and 67 counselors. All Ss completed a variety of questionnaires. A random sampling of 550 teachers, administrators, and counselors was personally interviewed by trained researchers. The 4 distinct and separate hypotheses tested were: there will be no significant differences in the (a) frequency of conflicts between the most professional and the least professional counselors as reported by teachers, administrators, and counselors; (b) intensity of conflicts between the most professional and the least professional counselors as reported by teachers, counselors, and administrators; (c) reactions to conflicts between the most professional and the least professional counselors as reported by teachers, counselors, and administrators; and (d) most professional and the least professional counselors in the types of conflicts in which they were involved. Based on the findings, the null hypothesis can be rejected at the .05 level in a, but cannot be rejected in b, c, and d.—S. M. Amatora.

(Far West Lab. for Educational Research & Development, Berkeley, Calif.) **Videotape feedback and microteaching in a teacher training model.** *Journal of Experimental Education*(Sum), Vol. 37(4), 9-16.—Attempted to determine the effectiveness of the minicourse model in changing student teacher behavior and to estimate the effects of the microteaching format and use of videotape feedback within this model. Feedback and practice in the microteaching format were manipulated with 4 groups of student teachers while a 5th group served as control (N = 17, 16, 15, 17, 14, respectively). 11 behaviors were scored for the 4 treatment groups on pre- and postcourse videotapes. 18 of the resulting comparisons were significant beyond the .01 level and 3 beyond the .05 level in the desired direction. 3 of the 11 control group gains were significant ($p < .05$). Treatment groups that did not receive videotape feedback and did not practice in the microteaching format were not significantly different from groups that did.—*Journal abstract*.

10847. Evans, Thomas P. (Oregon State U.) **Teacher verbal and nonverbal behaviors and their relationship to personality.** *Journal of Experimental Education*, 1969(Fal), Vol. 38(1), 38-47.—Attempted to develop a reliable category system for systematic observation of teacher behaviors. A category system was developed in an inductive manner. Teachers behaviors were encoded from video tape recordings onto a data record using 10-sec time intervals. Video tape recordings of 8 biology teachers were analyzed. The Guilford-Zimmerman Temperament Survey was administered. The behavioral and personality data were correlated using nonparametric statistics. The instrument met the stated definition of a reliable category system. Significant positive correlations were found between the behavioral and personality data, but there were less than one would expect to find by chance alone.—*Journal abstract*.

(Ontario Inst. for Studies in Education, Toronto, Canada) **Perceptual-cognitive style as related to self-evaluation and supervisor rating by student teachers.** *Journal of Experimental Education*, 1969(Spr), Vol. 37(3), 51-55.—Attempted to provide additional information related to 5 hypotheses concerning (a) the relationship between dogmatism and self-evaluation in teaching, and (b) the relationship between dogmatism and the evaluation of supervising personnel. A review of the literature and of previous work in this area produced hypotheses related to differences between open- and closed-minded student teachers and their rating and description of themselves and of their supervising teachers. Results support the hypotheses and indicate that the rating of one's teaching,

which may be considered a manifestation of the evaluation of self in total, and the rating of one's superordinates are, in some respects, a function of the perceptual-cognitive style of the rater. (29 ref.)—*Journal abstract*.

10884. Baker, Eva L. (U. California, Los Angeles) **Effects on student achievement of behavioral and nonbehavioral objectives.** *Journal of Experimental Education*, 1969(Sum), Vol. 37(4), 5-8.—Conducted an experiment in the field of social science where 1 of 3 lists of objectives—1 list nonbehavioral, the other 2 behavioral—was randomly assigned to 18 experienced participating high school social studies teachers who were instructed to teach objectives in their classes. Unit sampling was used and 18 classrooms were involved. Students were measured, using a form of item sampling, on the acquisition of the 5 skills stated in the behavioral objectives as well as on 18 transfer skills. Teachers' faulty understanding of objectives, indicated by their inability to provide relevant classroom practice and to identify, when asked, test items measuring given objectives, may

have accounted for lack of differences.—*Journal abstract*.

10887. Berretta, Shirley. (U. Southern Mississippi) **Self-concept development in the reading program.** *Reading Teacher*, 1970(Dec), Vol. 24(3), 232-238.—Of all the areas of personality correlated with reading achievement, 1 factor, self-concept, is particularly useful for reading teachers. Research supports the idea that an adequate self-concept is an important component of successful reading. Ways in which self-concept may be developed are discussed and it is concluded that "self concept is as much a factor in reading success as intelligence or mastery of basic skills. A program integrating reading instruction and development of positive self perceptions . . . offers the promise of meeting individual needs for learning and for good emotional development."—P. D. Leedy.

10891. Caplin, Morris D. (Queens Coll., City U. New York) **The relationship between self concept and academic achievement.** *Journal of Experimental Education*, 1969(Spring), Vol. 37(3), 13-16.—Hypothesized that white and Negro children, attending a de facto segregated school have less positive self-concepts than do children attending desegregated schools, and that there is a significant positive relationship between self-concept and academic achievement. 60 children from the intermediate grades of elementary schools in a small city in New Jersey were matched on the basis of age, grade, sex, race, intelligence, and socioeconomic status. Analyses of variance were computed on the scores obtained from the self-report instrument administered and correlations between these scores and achievement scores were calculated. It was found that children attending the de facto segregated school had less positive self-concepts. There was also a significant positive relationship between self-concept and academic achievement. 10894. Clark, D. Cecil. (U. Washington) **Competition for grades and graduate-student performance.** *Journal of Educational Research*, 1969(Apr), Vol. 62(8), 351-354.—Compared 2 classes (N=49 and 59) of graduate students in education on 2 criteria: research papers (R) and examination scores (E). Class A competed for grades on R but not on E. Class B was not allowed to compete for grades on either criterion. On R, Class A performed at a significantly higher level than Class B; on E, both classes performed at the same level. Students in Class A performed at a higher level on R than they did on E. Results suggest that performance among graduate students is significantly higher under conditions in which they compete for grades than under conditions in which there is no competition for grades. (Educational Testing Service, Princeton, N.J.) **Conscious self-appraisal of achievement motivation: The self-peer rank method revisited.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 23-26.—Describes 2 studies with 41 and 20 undergraduates, respectively, on the self-peer rank of need for achievement (*n Ach*) and correlation with academic success. It was found that (a) when Ss use their peers as reference points, they are able to give self-reports of their levels of *n Ach* which are predictive of academic success; (b) these judgments of motivation are independent of achievement-success information; (c) when Ss are given a common standard, the level of accuracy of the predictions is higher than reported previously; and (d) the correlations between judgments of motivation and measures of performance are relatively independent of correlations between measures of ability and measures of performance. It is concluded that *n Ach* is not, as traditionally considered, an unconscious characteristic and that the self-peer rank method may be a useful adjunct to assessment procedures.—*Journal abstract.*

New York) **Factors affecting response to white intellectual standards at two Negro colleges.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 995-1003.—Describes 2 experiments on the effects of the race of an E and objective probability of success (*P*) on southern Negro college students' performance at cognitive tasks that were defined as mental tests with white norms. The tasks were arithmetic and digit-symbol substitution. The hypothesis was that Ss (*N* = 230) would perform better

with a Negro tester when P_1 was low or medium, but as well or better with a white tester when P_1 was high. The prediction was confirmed in Exp. I, which was carried out at an academically nonselective institution. Exp. II was a replication at an academically more selective institution where Ss responded more favorably to the white tester in all P_1 conditions. Individual differences in general success-failure orientation were not related to performance.—*Journal abstract.*

10940. **Weiner, Bernard.** (U. California, Los Angeles) **Thoughts and actions associated with achievement motivation.** *Irish Journal of Education*, 1969(Win), Vol. 3(2), 105-116.—Presents an overview of prior research in the area of achievement motivation. Recent findings in studies with undergraduates and student teachers are presented which suggest that beliefs concerning the causes of success and failure may mediate between the level of achievement, needs, and behavior. The disparate consequences of attributing an outcome (success or failure) to effort as opposed to ability are discussed. (20 ref.)—*Journal abstract.*

10941. **Wells, Twyla T.** (U. California, Los Angeles) **The effects of discrimination upon motivation and achievement of black children in urban ghetto schools.** *American Behavioral Scientist*, 1969(Mar), Vol. 12(4), 26-33.—Cites as discriminatory the white middle-class orientation and expectations of public school systems across the country. Because cultural differences are seen as deficiencies, black children are expected to achieve less and thus become the victims of a self-fulfilling prophecy. IQ and achievement test scores are given a rigid significance, setting limits on the child at an early age; little is done to motivate the child beyond what is considered his highest level of achievement. Such children feel antagonism toward the school and the teachers who have imposed perpetual failure and inferior capability on him. The black child in a ghetto school not only has to face teacher attitudes, but also the deteriorated state of the school itself.—*M. West.*

10942. **Wethington, Charles T.** (U. Kentucky) **A study of the relationships between attitude toward English and several selected variables.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1637-1638.

10943. **Whisenton, Joffre T. & Lorre, M. Ray.** **A comparison of the values, needs, and aspirations of school leavers with those of non-school leavers.** *Journal of Negro Education*, 1970(Fal), Vol. 39(4), 325-332.—196 boys and 190 girls in the Grade 9 class of a large Southern urban Negro high school served as Ss. The measuring instruments administered to all Ss were the Whisenton Belief Scale, Whisenton's Academic Level of Identifying Figures, Sims Fields-of-Study Motivation Record, and the Stern Activities Index. 9 mo. later, when it was ascertained that 42 girls and 36 boys had dropped out, statistical comparisons were made between dropout and continuing Ss. It was determined that the dropouts tended to have a more fatalistic view on life and identify with glamorous figures in the entertainment and sports world. The continuing male Ss differed from the dropout male in motivation, while the females were not differentiated.—*S. R. Diamond.*

10944. **Whitman, James R.** (Veterans Administration Hosp., Tacoma, Wash.) **Free recall of verbal material in the classroom as a function of method of presentation and method of practice.** *Journal of Experimental Education*, 1969(Sum), Vol. 37(4), 78-81.—Varied order in which stimuli were presented, and practice instructions for 182 undergraduates receiving classroom practice on a free recall task with lists of nonsense words. The order within the list was a critical factor for the 2 levels of task difficulty used. Ss who studied the list gave more correct responses than did those who copied the list with the difficult material only. Ss then received additional practice with a 2nd list. No facilitation in the free recall of the 2nd list, attributable

to the conditions which facilitated the learning of the 1st list, was found.—*Journal abstract.*

F.** (Temple U.) **Prediction of perceptual reading disability among disadvantaged children in the second grade.** *Reading Teacher*, 1970(Oct), Vol. 24(1), 23-28.—Administered achievement tests to 108 children at the beginning of second grade. The findings of the study indicate that the Metropolitan Readiness Test total score appears to offer the most potential for adequate discrimination among failing and adequate readers. The low correlations of IQ to perceptual reading achievement and the finding that low-IQ children who fail in reading on related psychoeducational tasks reinforce a conclusion that IQ is not the primary determiner of skill acquisition or nonacquisition in reading. Many prediction instruments are not sensitive enough to separate chance performance from actual performance of disadvantaged children.—*P. D. Leedy.*

10956. **Hall, Joseph C.** (Temple U.) **A comparative**

study of selected measures of intelligence as predictors of first-grade reading achievement in a culturally disadvantaged population. *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1074.

10957. Hills, John R. & Stanley, Julian C. (Florida State U.) **Easier test improves prediction of black students' college grades.** *Journal of Negro Education*, 1970(Fal), Vol. 39(4), 320-324.—3 predominantly Negro, 4-yr, coeducational, public colleges in a Southern state provided the data. All the applicants were required to submit Scholastic Aptitude Test (SAT) scores when applying for admission. The students were given the similar but easier Level 4 of the School and College Ability Test (SCAT) during the orientation program in their freshman year. This test was designed for Grades 6-8. The 2 subtests of the SCAT are shown to predict freshman year grades in the colleges studied significantly better than did the SAT, which was too difficult for many of the enrolled freshmen. Relative improvement in prediction lessened when high school grade average became a joint predictor, apparently because the high school grades of students who scored low on SAT supplied some of the missing intellectual components. —S. R. Diamond.

10959. Lessler, Ken; Schoeninger, D. W., & Bridges, Judith S. (205 Northwestern Mutual Bldg., Chapel Hill, N.C.) **Prediction of first grade performance.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 751-756. —Studied prediction in 3 schools, each representing a different socioeconomic level. In each school 3 predictors, the Lee-Clark Reading Readiness Test (LCRRT), the Bender Gestalt Test, and the Peabody Picture Vocabulary Test were administered to 154 1st grade children and used to predict performance on the California Reading Test and teachers' ratings administered later in the year. The LCRRT was the best single predictor in all 3 schools, correlations ranging from .51-.64 with the Reading Test and .42-.66 with teachers' ratings. The Bender and Peabody did not predict a significant amount of variance in the criteria not already accounted for by the LCRRT. Prediction of adequate or inadequate performance for individual Ss using a cutting score on the LCRRT and adequate-inadequate distinctions on the 2 criteria showed the LCRRT to predict failure correctly 73-89% of the time. Prediction was improved in the lowest class school by lowering the LCRRT cutting score, indicating the possible need for different cutting scores for children of different socioeconomic backgrounds. —*Journal abstract.*

10961. Nash, John M. (Boston U., School of Education) **Prediction of academic achievement of women at a private junior college through use of certain intellectual and family relationships measures.** *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2113-2114.

10962. Patton, William F. & Edwards, Elizabeth. (U. Texas, Medical School, Galveston) **School readiness skills, personality characteristics and peer popularity of kindergarten children.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 689-690. —Explored the relationships between teacher ratings of school readiness skills, personality characteristics of kindergartners, and children's popularity among their peers. School readiness was related to positive personality growth and peer popularity in 11 boys and 9 girls enrolled in a private kindergarten. Improvement over the school year in academic and personality ratings by the teacher were highly correlated. It is concluded that this study provides additional evidence of the relative importance of intellectual, affective, and personality variables in the prediction of academic achievement. —*Journal abstract.*

10963. Pickering, Charles T. (Ohio U.) **A study of intellectual abilities of culturally disadvantaged children as predictors of achievement in reading, mathematics, and listening in grade one.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1085.

10964. Shouksmith, George. (Queen's U., Belfast, Ireland) **Validity studies with a test of high-level reasoning.** *Irish Journal of Education*, 1969(Win), Vol. 3(2), 117-122. —Employed a measure of high-level reasoning, the Canterbury Reasoning Test (CRT), in 2 studies, aimed at establishing its construct and predictive validity. Data from a factorial study with 50 undergraduates provides evidence for the construct validity of the test as a measure of 2 basic aspects of high-level reasoning: (a) logical reasoning, and (b) pure associative reasoning. A practical study carried out for the New Zealand Forest Service, using 39 forester cadets, suggests that the CRT has some validity as a predictor of success in university studies. —*Journal abstract.*

10965. Titus, H. Edwin. (Muskogum Coll.) **The use of peer nominations as a predictor of academic success in college.** *Journal of Experimental Education*, 1969(Sum), Vol. 37(4), 63-66. —Investigated the peer nomination technique as a predictor of academic success among 252 members of a college freshman class. Nomination forms were administered at the end of orientation week before Ss had attended any classes, after 5 wk. of classes but before any grades had been officially released, and after 11 wk. of classes and after midterm grades had been released. The technique provided scores which were reliable and which were valid against a grade point ratio criterion. The peer nomination scores were shown to tap variance independent of Scholastic Aptitude Test scores and, therefore, their applicability was suggested in academic counseling as a predictor to identify students who may face academic difficulties. —*Journal abstract.*

Overachievement & Underachievement

10966. Bright, George M. (Medical Coll. of Virginia, Adolescent Medicine) **The adolescent with scholastic failure.** *Bulletin of the Orton Society*, 1970, Vol. 20, 59-65. —Proposed that most scholastic failures of teenagers in school is related to psychosomatic, rather than

organic causes. A thorough battery of psychological and achievement tests should be administered. The physician was encouraged to draw historical information from teachers, parents, and guidance counselors, and to interview the student alone. Common causes of academic problems are outlined. Poor student-teacher relationships, intellectual deficiency, specific language disabilities like dyslexia might have been hidden causes of failure in school. True concern for the patient may spur the student's confidence to enable him to higher achievement in school.—C. O'Donnell.

10967. Hartman, Robert S. (U. Miami) **The effects of experimentally induced cognitive dissonance on the grade point average of selected underachievers.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1621.

10969. Kipnis, David & Resnick, Jerome H. (Temple U.) **Experimental prevention of underachievement among intelligent impulsive college students.** *Journal of Consulting & Clinical Psychology*, 1971(Feb), Vol. 36(1), 53-60.—64 impulsive freshmen with Scholastic Aptitude Test scores of 1000 or more were assigned to 1 of 4 conditions: (a) paid counseling—Ss were paid each time they attended a weekly counseling session; (b) paid math—Ss were paid for passing a weekly math quiz; (c) paid control—Ss were paid weekly with no contingent effort required; and (d) unpaid control—there were no experimental interventions. 64 nonimpulsive freshmen served as controls in each of the 4 conditions. Results were that paying Ss to attend counseling sessions significantly improved their final grades. Paying Ss to study mathematics was only effective among the brighter impulsive students. It is concluded that both treatment conditions forced impulsive Ss to pay attention to their school progress on a continuing basis. (20 ref.)—*Journal abstract*.

development in kindergarten children. *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2212.

10975. Blaney, John P. & McKie, Douglas. (U. British Columbia, Vancouver, Canada) **Knowledge of conference objectives and effect upon learning.** *Adult Education*, 1969(Win), Vol. 19(2), 98-105.—Investigated whether knowledge of instructional objectives in an adult education program assists the participants to attain these objectives. Before the conference, 60 volunteer public school administrators were divided into 3 groups: Group A was provided with the instructional objectives in behavioral form; Group B with a general orientation to the program; and Group C with a pretest (in order to determine whether there was a change in the behavior under consideration during the conference). Upon the conclusion of the conference, all groups were given a posttest. The hypothesis was upheld at the .05 significance level. Additional hypotheses are suggested concerning ways in which adult educators may usefully employ behavioral objectives in program planning and administration. (15 ref.)—*Journal abstract*.

10980. Durst, Wesley N. (U. Nebraska) **The ninth grade physical science programs and appraisal of achievement, understanding, and vocational interest developed through three different physical science curriculums in Lincoln schools.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1507.

10981. Edwards, Joseph & Stern, Carolyn. (Child Guidance Center, Youngstown, O.) **A comparison of three intervention programs with disadvantaged preschool children.** *Journal of Special Education*, 1970(Spr), Vol. 4(2), 205-214.—Investigates 2 different structured language programs counteracting the language deficiencies of disadvantaged children. Either the University of California Preschool Language Program or the Readiness for Language Arts Program was administered to 4 yr. olds participating in Head Start. 2 control groups were used. The placebo group had special activities, e.g., listening to songs, poems, and stories, and participating in group games and coloring. The normal control group had a regular Head Start program with no intervention other than pre- and posttesting. All Ss were pre- and posttested with the Peabody Picture Vocabulary Test, the Preschool Inventory, the Gumpgookies: A Test of Motivation to Achieve, the BRL-Concepts Test, the Visual Discrimination Inventory, and the Early Childhood Language Tests for Four-Year-Olds. Results indicate little difference between treatment groups, with both groups scoring higher on a number of tests than control groups. Subjective evidence indicates that Ss liked the University of California program better than

the Readiness for Language Arts. (31 ref.)—L. M. Glidden.

10982. Fisher, David H. (Louisiana State U.) Effects of two different types of physical education programs upon skills development and academic readiness of kindergarten children. *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1600-1601.

10983. Gross, Morris B. (128 W. Walnut St., Long Beach, N.Y.) Reasoning ability of Hebrew parochial school students. *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 837-838.—Studied whether Talmudic students are superior reasoners as a result of the massive effort and time devoted to Talmudic training. 2 10th and 2 7th grade groups, 1 each from the Hebrew parochial schools and public schools, were compared on 6 reasoning tests. As both parochial groups were significantly superior, it is concluded that Talmudic methodology may permeate the complete Hebrew parochial school, that syllogistic and inductive techniques may be taught without formal study of the Talmud.—*Journal abstract*

10984. Gupta, Willa & Stern, Carolyn. (U. California, Los Angeles) Comparative effectiveness of speaking vs. listening in improving spoken language of disadvantaged young children. *Journal of Experimental Education*, 1969(Fal), Vol. 38(1), 54-57.—Tested the hypothesis that children who repeat sentences aloud will acquire greater facility in forming similar sentences on their own than those who only listen to the spoken sentences. 40 disadvantaged 43-55 mo. old Negro children served as Ss. Identical sequences of 5 15-min. daily lessons plus 2 days of testing were presented under 2 treatment conditions, speaking and not-speaking. By analysis of covariance a significant difference was found ($p < .01$) favoring the speaking group. This difference was attributable to scores on the verbalization subtest, as both groups demonstrated equal facility in identification. A transfer task with verbalization to entirely different pictures produced similar significant treatment effects ($p < .01$).—*Journal abstract*

10985. Hampton, Gerald E. (Columbia U.) The effects of manipulating two types of feedback, knowledge of performance and knowledge of results, in learning a complex motor skill. *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1601-1602.

10986. Heffler, James A. (Houston) An evaluation of a summer preschool program for live- and six-year-old culturally deprived children in the Lamar Independent School District of Texas. *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1539-1540.

10987. Houston, Samuel R. & Bentzen, Mary M. (Colorado State Coll.) Teaching effectiveness in culturally deprived junior high mathematics classes. *Journal of Experimental Education*, 1969(Fal), Vol. 38(1), 73-78.—Investigated the extent to which a policy existed regarding the evaluation by a team of 4 evaluators from the Center for Study of Evaluation of Instructional Programs of 13 teachers participating in an experimental mathematics program at 3 demonstration math centers in 3 junior high schools located in culturally disadvantaged areas of a large Southern California district. The investigators used a modified form of the judgment analysis technique to capture the policy. Results indicate that the subset of predictor variables identified as teacher characteristics contributed significantly to the group

policy while another subset of predictor variables which were essentially pupil characteristics failed to make a significant contribution to the policy expressed by the evaluators.—*Journal abstract*

10988. Incerto, Richard A. (Boston U., School of Education) Impact of a cultural and educational enrichment program on the sense of identity of economically disadvantaged adolescents from an urban area. *Dissertation Abstracts International*, 1970(Nov), Vol. 31(5-A), 2496.

10989. Jacobs, Sylvia H. (U. Texas) Parent involvement in Project Head Start. *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1649-1650.

10990. Krown, Sylvia. (Hebrew U., Jerusalem, Israel) Preschool programs for disadvantaged children. *Children*, 1968(Nov), Vol. 15(6), 236-239.—Presents observations on current preschool education programs and methods of dealing with "social and educational problems of culturally deprived children" in the United States, and examines their relevance to Israeli programs. Data is drawn from observation, literature, and experience. The problems of definition of goals and policies, changing methods, cognitive learning vs. affective relating, discovery vs. directed training, teacher-child relationships, free imaginative play vs. structured cognitive learning, and group size are examined. Project Headstart and programs attempting to stimulate intellectual development in infants and very young children are discussed. It is concluded that an eclectic approach could best be applied in Israel.—G. Steele.

10996. Miller, L. Keith & Schneider, Richard. (U. Kansas) The use of a token system in Project Head Start. *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 213-220.—Attempted to develop a practical and effective method for teaching the beginning elements of hand-writing in a Head Start program by reinforcing responses which gave children access to a variety of activities normally available in the preschool classroom. Tokens were presented for correct responses and then used to select reinforcers, e.g., snacks and access to a variety of play activities. In an experimental evaluation of the token system used with 22 4-5 yr. old children, it was found that responding was maintained as long as access to the reinforcing activities was contingent

upon responding. When reinforcement was no longer contingent upon responding, virtually no responding occurred. Informal observations suggested that the token system had several unanticipated effects: vocabulary and ability to understand instructions improved; a favorable attitude toward school developed; and ability to play cooperatively with other children increased. It is concluded that the token system is a practical and effective method for teaching beginning writing skills, and has other desirable effects.—*Journal abstract.*

10998. Peters, John M. (North Carolina State U., Raleigh) **Internal-external control, learning, and participation in occupational education.** *Adult Education*, 1969(Fal), Vol. 20(1), 23-43.—Investigated the effect of internal-external control on retention of control-relevant vs. noncontrol-relevant information, and differences among internal and external prison inmates in their participation in occupational education programs. Results of a 2 × 3 factorially designed experiment with 216 and 169 inmates support the thesis that internal Ss retain more information than external Ss. However, the hypothesis that this difference depends on the perceived relevancy of such information to control is not supported by the data. A greater proportion of internal Ss participated in occupational education programs than did external Ss. It is concluded that a person can be described as possessing a generalized expectancy of control or lack of control over his environment, and that this characteristic can affect his willingness to learn information or engage in activities that could reasonably be expected to increase his chances of control over his environment, e.g., preparation for employability.—*Journal abstract.*

11002. Slaughter, Charles H. (Santa Paula School District, Calif.) **Cognitive style: Some implications for curriculum and instructional practices among Negro children.** *Journal of Negro Education*, 1969(Spring), Vol. 38(2), 105-111.—Attempts to bridge the information gap between educators and researchers and make some specific recommendations for changes in curriculum and instructional practice for culturally disadvantaged youth in general and Negro children in particular. Findings with lower-class youth indicate that there is a high responsiveness to social reinforcement, and that fatherless youth and all Negro youth tend to show passive, field-dependant personalities. Research indicates that the teacher should specify tasks, organize the experience, provide reinforcement or feedback on performance, and encourage abstraction of performance into language. Inquiry training involves a film strip which demonstrates

a scientific phenomena, requires observation, theorization, active participation, and provides constant positive reinforcement. The method is deemed of value in developing these cognitive skills. Male primary teachers are noted as being a potential source of positive role identification which may result in fewer school adjustment and behavior problems. (16 ref.)—S. Knapp.

11004. Van den Daele, Leland D. (U. Illinois) **Preschool intervention through social learning for disadvantaged children.** *Journal of Negro Education*, 1970(Fal), Vol. 39(4), 296-304.—Designed an intervention program to provide the disadvantaged male with a competent model, a set of appropriate roles, and an opportunity for positive, role-derived interaction. 16 3-4 yr. old children from low-income families were used. Ss were divided into 2 groups and a male model, 1 Negro and 1 white, assigned to each group. Ss were taken through an array of role play procedures. There was also positive verbal and physical interaction with the child in the context of imitative play. The program continued for 25 wk. during which each model interacted with his group 2 hr/day, 3 days/wk. The models changed groups after 12 wk. The Peabody Picture Vocabulary Test, selected cards from the Children's Apperception Test, and the Decision-Making Interview were administered to the children at 5-wk intervals. Results show significant cognitive, affective, and ego gains.—S. R. Diamond.

(Columbia U.) **The language of instructors teaching methods in science for the elementary school with an exploratory study of the relationship between selected behavior of these instructors and their students' perception of their behavior.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1512-1513.

11035. Kulkarni, S. S. **Educational technology in India: Education and national development.** *Educational Technology*, 1969(Nov), Vol. 9(11), 28-32.—Discusses the use of radio, film, and TV in school and adult education in India, and outlines 6 pilot studies in programed learning. Problems in creating a positive attitude toward educational technology are noted.—S. Knapp.

11036. Lippmann, Glenda K. (U. Texas) **Personality correlates of differential performance and satisfaction in self-directed vs. teacher-directed instructional strategies.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1119-1120.

11037. Long, George R. (Purdue U.) **A study on the preparation of an audio-tutorial minicourse.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1690-1691.

11038. Lowry, Heath W. (U. of the Pacific, University Reading Clinic) **A paradigm: Current approaches and programs in reading.** *Reading Teacher*, 1970(Nov), Vol. 24(2), 120-123.—States that contemporary reading instruction is probably as complex in theory and structure as any single area of elementary curriculum. An attempt is made to plot the basic levels of a schema to show as clearly as possible the (a) modalities of learning through which reading takes place, (b) the strands of a methodology of reading instruction, (c) the current approaches to the teaching of reading, and (d) the administrative schedules by which the instructional program is implemented.—P. D. Leedy.

11039. MacAdam, Millard N. (U. Southern California) **A comparison of antonymically sequenced stimuli and nonantonymically sequenced stimuli when used to develop word meanings with begin-**

ning kindergarten children. *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1078.

11040. McLeish, John. (Cambridge Inst. of Education, England) **The lecture method.** *Cambridge Monographs on Teaching Methods*, 1968, No. 1, 60 p.—Examines experimental work on student retention of lecture materials, student attitudes, and the improvement of lectures. General philosophical critiques of the lecture method are discussed. It is concluded that although the lecture method may be justified, the lecture system—compulsory daily lectures unleavened by tutorial discussion, seminars, or workshops—has little positive value and several negative aspects. (9 p. ref.)—S. Knapp.

11041. Muller, Douglas G. (U. New Mexico) **A transfer of paired-associates learning approach to reading acquisition.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1629.

11042. Myers, William A. (Veterans Hosp., Minneapolis, Minn.) **Operant learning principles applied to teaching introductory statistics.** *Journal of Applied Behavior Analysis*, 1970(Fal), Vol. 3(3), 191-197.—Promised a grade of A to an introductory statistics class for meeting a set of contingencies: (a) no work outside of class (except by request), (b) near-perfect performance on exams following each unit of work in a programed text, (c) correction of all exam errors, (d) self-pacing of work, and (e) the chance to finish the course early. A grade of incomplete was given otherwise. Correlations among performance measures failed to show any meaningful relationships between time taken to finish the course, errors made on exams, and errors made in the programed text. Responses to a 5-part questionnaire were overwhelmingly favorable to the course, but did not vary as a function of GPA, time taken to finish the course, or number of errors made on exams. The uniformly high level of performance, the students' lack of interest in social contact with the instructor during class, and the absence of dropouts are all attributed to the contingencies employed, chief among which were self-pacing, frequent nonpunitive exams, and a guaranteed grade of A for near-perfect work at every stage.—*Journal abstract.*

11043. Oguri, Mitsugu. (Keio U., Center for the Science of Learning, Tokyo, Japan) **Educational technology in Japan: Attention to "technology."** *Educational Technology*, 1969(Nov), Vol. 9(11), 36-37.—Reports that teaching machines have surpassed software in the degree and rate of development in Japan. 3 major obstacles to the progress of programed learning are noted: (a) the difficulty of programming subject matter for teachers who are too busy to devote many hours to it; (b) the incompatibility between the programed instruction principle of allowing students to progress at their own speed, and the present seniority-type class and grade systems; and (c) opposition from teachers who argue that programming does not cultivate real thinking ability in students. It is concluded that "there is a need for more fundamental research on programming and the use of audiovisual facilities. How to fit programed instruction into the educational system as a whole is another major problem to be solved in the near future."—S. Knapp.

11055. Wood, Forrest. (U. Southern Mississippi) Why the "real" world? *Southern Quarterly*, 1969(Oct), Vol. 8(1), 91-98.—Examines the philosophical aspects of choosing between the ordinary sense world and a hallucinatory l induced by drugs. It is felt that both worlds are real in the sense that the individual is receiving data in both and not creating it. "The difference between the 2 worlds lies in the interpretation of the data." The nature of the usefulness of the interpretation, the nature of man, and the nature of the relation of man to society are examined. Reasons for preferring a life of fully developed sense experience in the ordinary sense world are discussed. It is concluded that the hallucinatory world serves as a substitute for a "creative and mature emotional life" to those people who have failed to develop a satisfying emotional life on their own.—G. Steele.

11056. Brown, Rex V. (U. Michigan) Research and the credibility of estimates: An appraisal tool for executives and researchers. Boston, Mass.: Harvard Business School, Div. of Research, 1969. xvii. 257 p. \$9.

11057. Bureš, Z. (Charles U., Inst. of Psychology, Prague, Czechoslovakia) Industrial psychology in Czechoslovakia. *International Review of Applied Psychology*, 1970(Oct), Vol. 19(2), 149-153.—Industrial psychology in Czechoslovakia began in 1921 when the Central Psychotechnical Institute was created. However, little progress was made during the years 1938-1958 because of the Nazi occupation, and because during the postwar period, industrial psychology was considered as incompatible with a socialist society. The first conference of Czechoslovak psychologists since the war was held in 1957. Industrial psychology is conceived in a general manner as concerning all aspects of professional activities. It is developed under the following headings: (a) university teaching and research, (b) institutes of applied research which are part of governmental services, (c) production businesses and particularly in personnel departments, and (d) popular courses organized for leaders. Several psychological reviews are published in Czechoslovakia and an increasing number of books in industrial psychology have appeared.—L. A. Ostlund.

11061. Meyer, G. Dale. (U. Iowa) Determinants of collective action attitudes among hospital nurses: An empirical test of a behavioral model. *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 904.

11062. Sipoš, I. & Hvizdoš, L. (Slovak Academy of Sciences, Inst. of Experimental Psychology Bratislava, Czechoslovakia) Rozhlasová a podniková anketa o vybraných otázkách průmyslové ekonomiky a sociální psychologie. [Special investigation of select questions of industrial economics and social psychology.] *Psychologie v Ekonomické Praxi*, 1968, No. 1, 22-28.—Describes an investigation under the auspices of periodic broadcasts of Czechoslovak radio into problems from various spheres of economic and social psychology in industry. The audience telephoned their questions during the broadcast and the numbers of calls increased from 145-1000 in the last session, indicating considerable listener interest. Results were analyzed and compared with the answers of the control group of 3376 persons in a textile factory. Final results are compared with those reached in other parts of the world. (Russian & German summaries)—English summary.

11063. Tscheulin, D. & Rausche, A. (U. Würzburg,

Inst. of Psychology, W. Germany) **Beschreibung und Messung des Führungsverhaltens in der Industrie mit der deutschen Version des Ohio-Fragebogens.** [Description and measurement of leadership behavior in industry with the German version of the Ohio questionnaire.] *Psychologie und Praxis*, 1970(Apr), Vol. 14(2), 49-64.—The usefulness of the Foreman Behavior Description Questionnaire in a German translation was tested in 2 samples ($N_s = 81$ and 102) by factor and item analysis. As in the American version, the 2 dimensions Consideration and Initiating Structure were statistically independent. The factorial similarity of the 2 versions justifies the use of the German version.—R. F. Wagner.

VOCATIONAL CHOICE & GUIDANCE

11064. Clemens, B. T. (Purdue U.) **Engineers' interest patterns after thirty-one years: Implications for SVIB scale revision?** *Measurement & Evaluation in Guidance*, 1970, Vol. 3(3), 152-157.—Multiple discriminant function analysis was used to investigate the interest patterns of 229 engineers who were administered the SVIB as freshmen in 1935 and were retested in 1966. A 3rd group consisted of 210 freshmen who completed the SVIB in 1966 and had persisted in engineering for 2 yr. Statistically significant differences existed among the 3 groups for the Engineering scale. Based on data from the 40 SVIB variates, the multiple discriminant analysis yielded an equivalent F value of 13.63 ($p < .001$). Each of the 3 groups occupied a distinct graphic field, with no overlapping of 68th centours and minimal dispersion of 95th centours. It is concluded that the Engineer scale on the SVIB is no longer adequate as a measure of engineers' interests.—S. M. Amatora.

11065. Di Fiore, E. & Renda, S. (Work Psychology Center, Palermo, Italy) **Etude sur l'applicabilité de quelques tests en orientation professionnelle.** [Study of the applicability of several tests in vocational guidance.] *Bulletin de Psychologie Scolaire et d'Orientalion*, 1969(Dec), Vol. 18(4), 257-271.—Administered the Raver 1938 Progressive Matrices (PM38) Test, the Revised Minnesota Paper Form Board (MPFB) Test, an observation capacity (OC) test, a task performance (TP) test, and a number operations (NO) test to 1560 apprentices and college students. Statistically significant differences in performance were noted in relation to (a) age only for the OC, TP, and NO; (b) length of schooling for all tests; and (c) sex only for the MPFB and NO. When the 5 tests were administered to 200 apprentices of homogeneous age and years of schooling, with results of each test correlated against the others in all possible combinations, coefficients showed that the PM38 correlated highly with the MPFB and the TP. Also, the number of aptitudes revealed by this battery is limited, the latter lacking factors, e.g., intelligence structure, Factor M, Factor W, and the mechanical factor; these factors, added to the battery, increase its usefulness as to prognosis of performance and profiling of intellectual qualities. Batteries used in vocational guidance should be changeable, taking into account age, education level, and sex, and constructed more economically by avoiding the inclusion of tests correlating highly among themselves.—T. N. Webster.

SELECTION & PLACEMENT

11066. Griffith, William & Jackson, Thomas. (Kansas State U.) **Influence of information about ability and**

non-ability on personnel selection decisions. *Psychological Reports*, 1970(Dec), Vol. 27(3), 959-962.—Investigated the influences on simulated personnel selection decisions of a job applicant's intellectual ability and the degree to which his opinions agreed with those of an evaluator in a factorial experiment using 78 undergraduates. Both variables significantly ($p < .01$) influenced recommendations to hire or not hire the applicant. Results are discussed with respect to the influence of valid and invalid job-success predictors on selection decisions.—*Journal abstract.*

11067. Jones, Robert H. (U. Oregon) **Sex prejudice: Effects on the inferential process of judging hireability.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 1013.

11068. Lacks, Patricia B. & Powell, Barbara J. (Malcolm Bliss Mental Health Center, St. Louis, Mo.) **The Mini-Mult as personnel screening technique: A preliminary report.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 909-910.—Investigated the relationship between the standard MMPI and the 71-item Mini-Mult Test in 20 male and 20 female applicants for a psychiatric attendant position. 4 significant differences were found. It appears that the Mini-Mult is reliably related to the MMPI and might be used to screen certain populations.—*Journal abstract.*

11069. Siskind, George. (Larue D. Carter Memorial Hosp., Indianapolis, Ind.) **Note on level of aspiration as a selective device for psychiatric aides.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 874.—Describes the testing of 12 aides which shows congruence with earlier results. 2 different combinations of estimate and performance on the Cassels Level of Aspiration Test discriminated between above and below average aides at $p = .01$. Caution in use of the test is suggested because of differences in aide populations. It is suggested that level of aspiration tests merit more attention as assessment and selective techniques.—*Author abstract.*

11070. Spencer, George H. (Arizona State U.) **Perception of qualifications which are determinant in the selection of the first-level field sales manager from the ranks of the salesmen.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 874.

TRAINING

11071. Gendre, Francis. **Validation d'une batterie de sélection pour les cours de formation professionnelle des adultes.** [Selection battery for adult professional formation courses.] *Bulletin du Centre d'Etudes et Recherches Psychotechniques*, 1968(Oct), Vol. 17(4), 263-268.—Attempted to organize a selection of candidates with aptitudes for construction, mechanical, and electrical work to undertake a 6-mo specialization course in the cited fields. Construction and metallurgical experiments conducted on people with possible aptitudes in these departments are outlined. It is concluded that although the results at times exaggerate the qualifications, the experiment is generally satisfactory.—I. Sirotin.

11072. Hill, Leonard R. (U. Nebraska) **A comparative study on immediate and delayed reinforcement on programmed instruction with hard-core unemployed subjects.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1622.

11073. Keir, Jack C. & Jaeger, Robert G. (Temple U.) **The engineering of learning.** *Journal of the American*

Society of Chartered Life Underwriters, 1969(Jan). Vol. 23(1), 48-55.—Presents a simplified explanation of programed learning techniques, including (a) the linear or straight line or Skinnerian program, and (b) the branching or Crowderian program. How learning is engineered, feedback, and the management of learning are discussed. Emphasis is placed on the development and use of programed learning in the field of life insurance. The new agent can be exposed to realistic selling situations through programed tapes, and "the experienced professional can continue his education relative to the more sophisticated aspects of pension plans and profit sharing plans through a tape recorder at home or a programed text on the train." It is concluded that the favorable response and apparent successful learning achieved by users suggest positive future possibilities.—*M. West*.

11074. Stern, Hervey W. & Aiken, Edwin G. **Training feedback study of the sonar technician intermediate electronics course.** *U.S. Naval Personnel Research Activity Research Report*, 1969(Sep), No. SRR 70-2, 116 p.—Examined the relevance and sufficiency of the sonar technician A-2 course to determine its appropriateness to the follow-on series of C courses. The A-2 course was designed to provide the theoretical background necessary for maintenance training on various sonar and fire control systems at the C level. A complete inventory of course objectives was presented to both A-2 and C school instructors for ratings made in terms of instructional goals (A-2 instructors) or required training level upon entrance to a given C school (C school instructors). The theoretical content was adequate, but certain areas had low commonality between C schools. Further knowledge and performance testing of A-2 graduates was conducted. Ss' theoretical knowledge in these key areas was generally superior to that required in the following courses. Performance testing indicates an inadequate training level for proper test equipment usage and soldering techniques. Specific course deficiencies are discussed and appropriate changes recommended.—*Journal abstract*.

11075. Tucker, Michael F. (U. Utah) **An experimental investigation of human relations laboratory training among disadvantaged Job Corpsmen.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3904.

11076. Warren, William H. (Purdue U.) **The effect of two reinforcement strategies upon the learning of an intellectual task.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1598.

TASK & WORK ANALYSIS

11077. Chadwick-Jones, J. K., Sheppard C., & Carceller, A. (University Coll., Cardiff, Wales) **Search strategies used by process operatives in continuous-flow technology: Performance and learning.** *Perceptual & Motor Skills*, 1970(Dec), Vol. 31(3), 775-785.—Observed 12 process operatives during 96 hr. on a continuous process for electrolytic treatment of steel. Results allowed decision points to be specified and flow charts to be devised for operatives' tasks. The content analysis was accompanied by an examination of the frequency distribution of job activities, giving a comparison of numbers of interpersonal, intrateam activities to man-machine activities, and testing the possibility of consistent patterns. Findings suggest an approach to

training, with emphasis on the similarity between maintenance, repair, and process monitoring tasks. (20 ref.)—*Journal abstract*.

11078. Davies, D. R. (U. Leicester, England) **Monotony and work.** *Science Journal*, 1970(Aug), Vol. 6(8), 26-31.—Surveyed work experiments to study the effects of certain variables which tend to hamper the efficiency of the S. Differences in temperament greatly alter the amount of errors found in inspection tasks. It is noted that often in assembly line type situations individual differences between workers is wrongly minimized. The effects of knowledge (KR) were also studied. 1 explanation suggests that KR builds up a set of expectancies. A 2nd theory proposed that KR acted as an incentive which motivated the S to pay closer attention to the task. KR was shown to affect the level of arousal. The effects of rest were also discussed. It is concluded that the single variable which bears the greatest relation to deterioration in efficiency in vigilance tasks is temperament.—*C. O'Donnell*.

11079. Graham, Ben S. (U. California, Los Angeles) **Career mastery: A study of growth and decline of occupational identity among air traffic controllers at Los Angeles International Airport.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3902-3903.

PERFORMANCE & JOB SATISFACTION

11080. Barrett, Charles F. (State U. New York, Buffalo) **An empirical analysis of learning curves.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1493.

11081. Fassina, Annie & Petit, R. **Connaissance des critères d'évaluation du travail et réussite en atelier dans des formations professionnelles aux métiers de la mécanique.** [Knowledge of evaluation criteria of work and job success in the professional education of the mechanical trades.] *Bulletin du Centre d'Etudes et Recherches Psychotechniques*, 1968(Jul), Vol. 17(3), 115-130.—Hypothesizes that a link exists between knowledge of evaluation criteria and work performance. 199 adults (machine operators, welders, plumbers, and drill-press operators) were placed in 1 of 2 groups. Group A was involved in planning criteria for evaluation of work; Group B was not. Evaluatory criteria were categorized under 3 headings—precision, speed of routine task completion, and quality control of the finished product. Results confirm the hypothesis. (English summary)—*B. A. Stanton*.

11082. Gavin, James F. (New York U.) **Ability, effort and role perception as antecedents of job performance.** *Dissertation Abstracts International*, 1970(Feb), Vol. 30(8-B), 3901-3902.

11083. Hall, Douglas T. & Lawler, Edward E. (Yale U.) **Job characteristics and pressures and the organizational integration of professionals.** *Administrative Science Quarterly*, 1970(Sep), Vol. 15(3), 271-281.—Examined job characteristics (wide range of projects, independent budget, job challenge, and direct customer responsibility) and 3 job pressures (time, financial responsibility, and quality) in 22 research and development laboratories, as possible correlates of organizational effectiveness and the need satisfactions and job involvement of researchers in the laboratories. Job challenge and responsibility for dealing with customers were related to quality pressure and financial responsibility pressure. Job challenge was also related to

need satisfaction. Quality pressure, a professional concern, and financial responsibility pressure, an organizational concern, were both related to organizational performance. Quality pressure was also related to job involvement, so that this pressure was functional for both the individual and the organization. Financial responsibility pressure was seen as the professional's adaptation to organizational values. (35 ref.)—*Journal abstract*.

11084. Kingston, Carmela; Winikur, David, & Chansky, Norman. (Temple U.) **Attitude toward work of prospective female clerical workers.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 752.—Administered 6 statements purporting to indicate degrees of attitude toward work to 132 high school girls enrolled in office practice courses. Items were administered by the paired comparison technique. Order among the items and scale properties corresponding to Thurstone's Case III Model were shown.—*Author abstract*.

11085. Stintzi, Vernon L. (U. Washington) **The relationships between the need for responsible work and job satisfaction of new college graduates.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1443.

11086. Wilson, Ernest F. (Duke U.) **A study of predictors and academic success of graduate students of the Resident School of Engineering (AFIT) as the predictors of post graduation job effectiveness.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1639.

MANAGEMENT & ORGANIZATION

11087. Bass, Bernard M., Cooper, Robert, & Haas, John A. (Eds.) (U. Rochester) **Managing for accomplishment.** Lexington, Mass.: Heath Lexington, 1970. x, 317 p. \$12.50.

11088. Carroll, Stephen J. & Tosi, Henry L. (U. Maryland) **Goal characteristics and personality factors in a management-by-objectives program.** *Administrative Science Quarterly*, 1970(Sep), Vol. 15(3), 295-305.—Correlated characteristics of goals established in a management-by-objectives program to criteria hypothesized to represent success of the program. 129 managers answered mailed questionnaires. Correlations were calculated after personality and job factors were held constant. Data indicate that establishing clear and important goals produced favorable results. Difficulty of goals and establishing goal priorities were positively correlated with criteria of success for managers with high self-assurance, maturity, and experience. Subordinate influence over goals was not an important goal characteristic. (43 ref.)—*Journal abstract*.

11089. Gordon, Leonard V. & Kikuchi, Akio. (State U. New York, Albany) **The measurement of bureaucratic orientation in Japan.** *International Review of Applied Psychology*, 1970(Oct), Vol. 19(2), 133-140.—Describes the preparation of a Japanese form of the Work Environment Preference Schedule (WEPS) and presents some preliminary data relevant to its validity in that culture. The items were translated and given to a wide range of Japanese students. The results were submitted to factor analysis. Correlations between the results on the Japanese form of WEPS and the values measured on the survey of personal values indicated that individuals who are characterized by a stronger bureaucratic orientation are inclined to attribute a higher

value to conforming behavior and a weak value upon treating others with consideration, when there is a necessity for making rapid decisions. These results agree with (a) conclusions of the theory of bureaucracy, (b) results of American researchers upon bureaucratic organizations, (c) relationships observed on American scales, and (d) research utilizing the same inventory of values. The WEPS results obtained indicated appreciable differences between college students and groups of workers in both sexes but not between students or between workers. There was a significant correlation between scores on WEPS and age. Further, those who obtained high scores on the WEPS have a tendency to feel themselves more secure and to think that their companies offer them greater possibilities of promotion. This final result is interesting from the viewpoint of the recent increase in industrial mobility in Japan.—*L. A. Ostlund*.

11090. Lester, Clarence N. (Florida State U.) **Selected personal and environmental factors influencing conformity or non-conformity to organizational norms in the Virginia Cooperative Extension Service.** *Dissertation Abstracts International*, 1970(Sep), Vol. 31(3-A), 999.

11091. Livečka, E. (Inst. of Heavy Industry, Prague, Czechoslovakia) **Předpoklady pro aplikaci programovaného učení při výuce řidičích pracovníků.** [Application of programmed teaching in courses for managers.] *Psychologie v Ekonomické Praxi*, 1968, No. 1, 13-21.—Deals with possibilities and methods of the application of programed teaching to the instruction of managers. Pedagogic aspects of some themes, e.g., the definition, content, and methods of teaching are discussed. Special attention is devoted to the programed teaching text and the teaching machine. Results of preliminary investigations of programed learning and hypotheses on types of programs used are described. (Russian & German summaries)—*English summary*.

11092. Rossel, Robert D. (Southern Illinois U.) **Instrumental and expressive leadership in complex organizations.** *Administrative Science Quarterly*, 1970(Sep), Vol. 15(3), 306-316.—Investigated instrumental leadership (production goals) and expressive leadership (employee relations) among managers and supervisors in 8 production organizations that varied in required labor commitment. Managers and supervisors responded differently to situations necessitating high required labor commitment. For managers, the higher the required labor commitment the more instrumental the leadership orientation; for supervisors, the opposite situation existed. (22 ref.)—*A. J. Kubany*.

11093. Wieland, George F. (Vanderbilt U.) **Note on interdependent contacts and coordination in organizations.** *Psychological Reports*, 1970(Dec), Vol. 27(3), 747-751.—Examined correlations between the extent of interdependent contacts and the adequacy of organizational coordination in a nationwide sample of 43 hospitals. No direct relationship was found, although an indirect positive relationship mediated by organizational strain was found as expected. It is suggested that further work be carried out on the apparent strain-reducing effects of interdependent contacts.—*Journal abstract*.

SPECIAL ENVIRONMENTS

11094. Bergeron, Hugh P. (National Aeronautics & Space Administration, Langley Research Center, Va.)

Investigation of motion requirements in compensatory control tasks. *IEEE Transactions on Man-Machine Systems*, 1970(Jun), Vol. MMS-11(2), 123-125.—Constructed tests consisting of 1- and 2-axis closed-loop tracking tasks, with and without motion, to define some areas where motion cues are beneficial. Tests were made with reduced scaling on the motion input to investigate the minimum requirements of motion cues in those tests where motion was found to be of assistance. Ss were 4 test pilots and 4 engineers, all with extensive tracking task experience. For the set of conditions tested, little or no difference in the measurement criteria was observed in the single-axis motion/no motion runs. Similar results were obtained when comparing 2 single-axis tests with different pitch orientation. The 2-axis tests, which consisted of pitch and yaw and pitch and roll, however, did produce a difference in the error measurements in the motion/no motion comparison. A decrease in normalized tracking error and an increase in closed-loop system frequency were observed when motion was added. Tests were also run, in pitch and yaw only, in which the scale of the motion input was reduced. These tests were performed by the S in sequence starting with no motion all the way to full motion and back down to no motion. Each motion scale condition constituted a test. The normalized tracking error remained constant for full, $\frac{1}{2}$, and $\frac{1}{4}$ motion scaling, but increased with a further reduction in motion scaling.—*Journal abstract*.

11095. Dushkov, B. A. *Dvigatel'naya aktivnost' cheloveka v usloviyakh germokamery i kosmicheskogo poleta*. [Human motor activity in the hermetic chamber and in space flight.] Moscow, USSR: Meditsina, 1969.—Presents a physiological analysis of the changes in motor activity, exhibited by astronauts in flight and in training. The basic viewpoint is 1 which regards the "adaptation of man to work activity as the formation of a complex reflex and biodynamic structure in accordance with the law [governing] the concentration of muscular forces and nervous excitation." Measures to "rationalize the regime of motor activity" for astronauts, based on a neurogenic theory of fatigue proposed by the author are suggested.—I. D. London.

11096. Schmidt, Ingeborg. (Indiana U., Div. of Optometry) **Visual problems when walking on the moon.** *Journal of the American Optometric Association*, 1970(Jan), Vol. 41(1), 46-49.—Presents a few of the visual problems which come to mind when contemplating the different optical environment encountered by the moon walker. Many laws of vision established in the laboratory could be applied directly to the vision on the moon's surface, e.g., of visual acuity, color vision, and others, if, the absorption, reflection, and distortion caused by the space helmet visor did not have to be considered. On the other hand, the moon represents an ideal huge laboratory for experiments on physiological optics with its distance vision undisturbed by an atmosphere, with areas illuminated by a source of fairly constant intensity and constant color temperature near to standard illuminant C, or also if desirable, with perfectly darkened areas. Moreover, the working time is unlimited, since a lunar day lasts approximately 14 terrestrial days.—*Journal summary*.

mation sensitivity and the sequence of psychological states in the brand choice process. *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1438.

11098. Oshikawa, Sadaomi. (U. Washington, School of Business Administration) **Can cognitive dissonance theory explain consumer behavior?** *Journal of Marketing*, 1969(Oct), Vol. 33(4, Pt. 1), 44-49.—Asserts that published findings in support of the cognitive dissonance theory are equivocal, and fail to show that cognitive dissonance is the only possible cause of observed dissonance-reducing behavior. Experimental evidences are examined and their weaknesses pointed out. Suggestions regarding the circumstances under which dissonance reduction may be useful in increasing the repurchase probability of a purchased brand are presented.—*Journal abstract*.

11099. Tsukahara, Theodore. (Claremont Graduate School & University Center) **The behavioral foundations of the theory of consumer choice under uncertainty.** *Dissertation Abstracts International*, 1970(Oct), Vol. 31(4-A), 1499.

ENGINEERING PSYCHOLOGY

11100. Burgess, W. A., Hinds, W. C., & Snook, S. H. (Harvard School of Public Health, Boston, Mass.) **Performance and acceptance of respirator facial seals.** *Ergonomics*, 1970(Jul), Vol. 13(4), 455-464.—Modified 3 respirator full face masks with different peripheral seal designs (flat, inner flap, and pneumatic) to permit study of the facial seal component. 12 healthy undergraduates completed a 3-hr test session on each mask. The 1st $\frac{1}{2}$ of each session was devoted to a study of leakage at 5 seating forces, and the 2nd $\frac{1}{2}$ to a comfort study of the same mask under the same forces. To test for differences in leakage for a given seating force, a uranine aerosol test was used to challenge the integrity of the facial seal and permit quantitative measurement of percent leakage. Differences in apparent seating force (and therefore comfort) between designs were studied utilizing a psychophysical technique. A suggested physiological correlate of comfort, galvanic skin potential, was also measured during the 2nd $\frac{1}{2}$ of the session. Significant differences were noted in the performance of 1 of the 3 masks as demonstrated by the leakage tests. The psychophysical evaluation did not reveal significant differences between the masks; however, significant differences were revealed by the galvanic skin potential measurements. (French & German summaries)—*Journal abstract*.

11101. Chapanis, A. (Johns Hopkins U.) **Plenary discussion: Relevance of physiological and psychological criteria to man-machine systems: The present state of the art.** *Ergonomics*, 1970(May), Vol. 13(3), 337-346.—Discusses the view that ergonomics seems to be more physiologically oriented than human factors engineering, its American counterpart, citing support from the literature and recent conference papers. Several possibilities are adduced to account for this divergent emphasis placed on the use of physiological and psychological criteria. More serious than such differences is that it is not immediately apparent how most criteria used in ergonomic and human factors research relate to the criteria that are used for the design and evaluation of systems. A viable technology requires the ability to show the relationship between the criteria used in experimental work and those used in the

practical world. (French & German summaries)—*Journal abstract*.

11102. Křivohlavý, J. (Medical Inst. Prague, Czechoslovakia) **Systémové inženýrství, inženýrská psychologie a psychologie práce.** [System engineering, engineering psychology, industrial psychology.] *Psychologie v Ekonomické Praxi*, 1968, No. 1, 5-12.—Describes system engineering as 1 of the means towards the realization of modern trends in technology. The development from machine to system engineering is described, and the concept of the system of new engineering and the system with the human factor is explained. The significance of engineering psychology increases with the position of man in modern systems. Man as the informative and energetic subsystem is emphasized. The complex solution of the working man and his problems belongs in the sphere of the industrial psychology. (Russian & German summaries)—*English summary*.

11103. Kuttan, Appu & Robinson, Gordon H. (U. Puerto Rico) **Models of temporal motor responses: Stimulus, movement, and manipulation information.** *IEEE Transactions on Man-Machine Systems*, 1970(Jun), Vol. MMS-11(2), 126-128.—Developed quantitative models of human motion relating RT, movement time, and manipulation time to stimulus, movement, and manipulation information. Response surface methodology, a statistical design and modeling technique, was used. Linear models relating time to information seem appropriate, and no significant interactions were uncovered.—*Journal abstract*.

11104. Sperandio, J. C. **Une étude expérimentale de transmission d'informations par clavier et écran d'affichage.** [An experimental study of transmission of information via computer and keyboard screen.] *Bulletin du Centre d'Etudes et Recherches Psychotechniques*, 1968(Jul), Vol. 17(3), 191-203.—Describes experiments concerning the real time-relationship between an operator and a computer within the framework of air traffic control operations. (15 ref.)—*English summary*.

11105. Sperandio, J. C. & Bissieret, A. **Facteurs humains dans l'étude des dispositifs d'entrée d'informations.** [Human factors in the study of information entry contrivances.] *Bulletin du Centre d'Etudes et Recherches Psychotechniques*, 1968(Oct), Vol. 17(4), 269-294.—Surveyed the problems posed by human "feeding" of information into machines and their "compatibility." Several methods are illustrated involving standard, numerical, and coded keyboards as well as visual and audio controls. The importance of speed and precision in operation of such contrivances are stressed and auxiliary gadgets, e.g., the rolling ball, light pen, and others, designated to speed up the operation are enumerated. It is concluded that total accuracy and precision on the part of contrivances is still uncertain and that this factor can be determined only after a thorough analysis of the operating instrument and the importance of each of its functioning parts. (63 ref.)—*I. Sirotnin*.

Displays & Controls

11106. Bernotat, Rainer K. **Rotation of visual reference systems and its influence on control quality.** *IEEE Transactions on Man-Machine Systems*,

1970(Jun), Vol. MMS-11(2), 129-131.—Electronic displays pose large human-engineering possibilities and new problems. 1 special aspect is the rotation of the display reference system. The human operator is unable to compensate for rotation; thus, errors increase considerably at 90 and 270° rotation angles. 30 inexperienced male Ss aged 20-35 yr. tracked 1 of 3 displays for 10 min. at a constant rotation angle. Each S took part in only 1 test run to avoid transfer problems. A new action display indicating the stick signal to the control system compensated for the rotation effect.—*Journal abstract*.

11107. Bissieret, André. **Les facteurs humains dans le développement d'un système hommes-calculateur.** [Human factors in the development of an automated system.] *Bulletin du Centre d'Etudes et Recherches Psychotechniques*, 1968(Jul), Vol. 17(3), 153-169.—Discusses problems encountered in the real time relationship between operators and a computer during the developmental phase of an automated system of regional air traffic control. Explains the transition to a new phase of automatic control through the use of computers in an important function of the system: coordination. Outlines the human factor studies conducted for the purpose of providing new working methods and evaluating the effectiveness of such methods. Particular stress is placed on the cooperation of psychologists with engineers and operators. (15 ref.)—*English summary*.

11108. Chambers, J. B. & Stockbridge, H. C. (Army Personnel Research Establishment, Farnborough, England) **Comparison of indicator components and push-button recommendations.** *Ergonomics*, 1970(Jul), Vol. 13(4), 401-420.—Designed 4 consoles identical in every respect except for the display and control components used in their construction. 2 levels of illumination were employed. 16 19-50 yr. old fit male Ss were tested. Ss responded to signals presented in a predetermined order by operating a control, e.g., a push button or key. RTs were taken using a simple time event recorder producing 5-hole punched paper tape output. A note was taken of errors of operation. Some 30,000 RTs were taken and analyzed using a 5-factor analysis of variance computer program. A similar rank order of the components was found for speed of response and accuracy of operation. Within the limits of the experiment a transilluminated push button was operated with the lowest RT and with least error. Factors affecting the design of push button controls and their associated displays are discussed. (French & German summaries) (34 ref.)—*Journal abstract*.

11109. Vartabedian, Allen G. (Bell Telephone Lab., Holmdel, N.J.) **Human factors evaluation of several cursor forms for use on alphanumeric CRT displays.** *IEEE Transactions on Man-Machine Systems*, 1970(Jun), Vol. MMS-11(2), 132-137.—Investigated cursor form and cursor blink rate in terms of their effects on operator search time in finding the cursor in a random location and their effects on tracking the cursor as it is moved between fixed random locations. 6 cursor forms at 5 alternation rates were examined. The cursor forms were box, underline, cross, diamond, blinking, and wiggling cursors. Alternation rates were 0, 2, 3, 5, and 6 Hz. Ss were 12 task-naïve females ages 20-26. Based on results and additional criteria about the use of CRT displays, it was determined that, of the cursors examined, a box cursor around each graphic character blinking at 3 Hz. is most effectively searched and tracked. Subjective evaluations support this finding.—*Journal abstract*.

DRIVING & SAFETY

11110. Altman, James W. (Datagraphics, Inc., Allison Park, Pa.) **Behavior and accidents.** *Journal of Safety Research*, 1970(Sep), Vol. 2(3), 109-122.—Attempts to identify the potential for unsafe behavior. Techniques for identifying potentially unsafe behavior through systematic analysis of error-likely situations, considerations in the engineering of tasks for safe performance, and the role of reinforcement schedules in learning safe and unsafe performance are discussed. Transfer of training principles having greatest relevance to safe performance are presented, particularly those relating to stimulus similarity, response similarity, and stimulus-response bonding. Some of the sources of conflicting reinforcement that can erode safe performance are identified as (a) conflict between speed and safety of performance, (b) discontinuities in communication from 1 organizational level to another, and (c) the drive to create tension for the enjoyment of its release. The difficulties of comparing safe performance from 1 context to another is discussed, emphasizing the need for a stable frame of reference and making some preliminary suggestions. —*Journal abstract.*

11111. Balla, John I. & Moraitis, S. (Prince Henry's Hosp., Melbourne, Victoria, Australia) **Knights in armour: A follow-up study of injuries after legal settlement.** *Medical Journal of Australia*, 1970(Aug), Vol. 2(8), 335-361.—Reviewed a group of 82 patients, all of Greek origin and suffering back or neck injuries from industrial or traffic accidents. In most cases the injuries were relatively mild, yet they produced a large variety of symptoms. The clinical features were to a large extent based on a mixture of organic and psychological causes, as well as social disturbances, owing to the particular cultural background of Ss. Legal proceedings were generally regarded as complicating factors and, at times, adversely influenced prognosis. A settlement of the legal matters, however, had little or no influence on most Ss and their symptoms persisted unaltered. No specific treatment was found to be particularly useful, but it was considered that surgery was contraindicated in most cases. Females, and those patients with severe psychological disturbances, would seem to have a poor prognosis. —*Journal abstract.*

11112. Kibrick, Eleanor & Smart, Reginald G. (Addiction Research Foundation, Toronto, Ontario, Canada) **Psychotropic drug use and driving risk: A review and analysis.** *Journal of Safety Research*, 1970(Jun), Vol. 2(2), 73-85.—Reviews studies of the incidence of psychotropic drugs in general populations, in samples of drivers, and samples of accident drivers. Investigations have varied in terms of drugs studied, reliability of data collection procedures, and criteria for choosing sample populations. This variability plus lack of replicative investigations makes the generation of conclusions tentative at this time. The studies cited show that 35-50% of the general population risk driving after drug use at least once/yr and suggest that 11-15% of accident drivers have taken a psychotropic drug prior to their accident. Psychotropic drug use is most likely to be found among certain drinking driver groups, especially the fatally injured. It is indicated that the veracity of drivers' statements about drug use is very low and drug use estimates derived from questioning are probably very conservative. Further research is recommended in

associating the use of psychotropic drugs with driving errors or with responsibility for accidents. (58 ref.) —*Journal abstract.*

11113. Kraus, A. S., Steele, R., Ghent, W. R., & Thompson, M. G. (Queen's U., Kingston, Ontario, Canada) **Pre-driving identification of young drivers with a high risk of accidents.** *Journal of Safety Research*, 1970(Jun), Vol. 2(2), 55-66.—Compared interview data on background characteristics between 205 drivers under age 21 recently in accidents vs. matched controls. Factors which were significantly more frequent in the accident group are: (a) failed 1 or more grades in or before Grade 8, or had been in a vocational high school course; (b) became a regular cigarette smoker at or before age 16; (c) had 1st full-time employment exclusive of school vacation time at or before age 17 and before obtaining a driving license; and (d) had been charged with a criminal offense. Ss who had been in a 1-vehicle accident showed still higher frequencies of these factors. The frequency of probable responsibility for a 1st accident within 6 mo. of receiving a drivers license was strikingly higher in those with these risk factors than in other accident cases, but these 2 groups had similar proportions with 2 or more accidents. Preventive implications are discussed. —*Journal abstract.*

11114. Kunkel, Eberhard. (Medico-Psychological Inst. of Technology, Mainz, W. Germany) **Reaktionsverhalten und Fahrtauglichkeit: Sammelreferat.** [Reaction behavior and driving fitness: A review.] *Zeitschrift für experimentelle und angewandte Psychologie*, 1970, Vol. 17(3), 488-536.—Some apparent contradictions were encountered in the review of research on driving ability and reaction performance which could, however, be cleared by a distinction between simple and multiple reaction tests. Multiple reaction tests have a close correlation to driving performance and are useful in predicting driving ability. (English & French summaries) (66 ref.) —*W. J. Koppitz.*

11115. Parker, Neville. (97 Wickham Terrace, Brisbane, Queensland, Australia) **Accident neurosis.** *Medical Journal of Australia*, 1970(Aug), Vol. 2(8), 362-365.—Briefly presents factors which may be involved in the etiology of accident neurosis: "the solicitor who sees his function as obtaining the highest possible damages, the neurologist who has to... exclude every possible organic basis for symptoms, and the physician who overtreats...." Conclusions are based on 100 cases of accident neurosis referred by solicitors. Illustrative anecdotes are presented. —*M. West.*

11116. Schuster, Donald H. (Iowa State U.) **Follow-up evaluation of the performance of driver improvement classes for problem drivers.** *Journal of Safety Research*, 1969(Jun), Vol. 1(2), 80-87.—Evaluated the effectiveness of a driver improvement class in California by comparing the subsequent driving records of 265 (12 female) drivers who attended the voluntary 18-hr class vs. the 405 (9 female) drivers who did not. All Ss had a 1-hr improvement interview with the Department of Motor Vehicles. Moving violation and driving accident rates were cut in 1/2 in the follow-up period for all Ss, but were still worse than that of the average California driver. The record of Ss who attended the class was comparable to that of the Ss who had the 1-hr interview alone. The influence of variables, i.e., license restriction and driving experience, is considered and suggestions made as to the type of driver who would

benefit by driver improvement classes.—*Journal abstract.*

11117. Tesser, Abraham & Grossman, Narvin. (U. Georgia) **Fate orientation as a correlate of driver knowledge.** *Journal of Safety Research*, 1969(Jun), Vol. 1(2), 74-79.—Administered 2 measures of fate vs. responsibility orientations to 51 male and 67 female undergraduates: Rotter's Internal-External Control Scale (I-E) and a specially constructed scale for fate orientation with respect to driving (FRD). The 2 scales had a low but significant correlation with each other (r all Ss = .22). The FRD correlated significantly as predicted with useful driving knowledge, but the I-E did not. The

relationship between the FRD and useful driving knowledge could not be accounted for by some 3rd variable for females ($r = .32$); but for males, when exposure to a driver education course was partialled out, the relationship was not significant ($r = .11$). The I-E correlated significantly with the number of accidents with the number of accidents with which the respondent was charged for a violation ($r = .23$ all Ss) as did the FRD for males ($r = .48$). Results suggest that individuals may have a fate orientation toward a particular activity, i.e., driving, while not being particularly fate oriented in general, and vice versa.—*Journal abstract.*

Brief Subject Index

This index supplements the classification of abstracts given in the Table of Contents, and is designed to lead the reader to subjects that are more specific than the general categories of the classification. When many abstract numbers are listed under a heading, the reader may simplify his task by matching the numbers found under the two or more headings that specify his particular interest.

Case Report-Treatment
 9182, 10024, 10053, 10059, 10070, 10088, 10104, 10108, 10114, 10117, 10123, 10124, 10128, 10132, 10156, 10256, 10258, 10295, 10296, 10298, 10324, 10399, 10404, 10453, 10474, 10508
Casework (SEE Social Casework)
Castration (SEE Personality, Sex, Sexual Behavior)
Cat
 9358, 9371, 9375, 9379, 9390, 9391, 9394, 9395, 9400, 9404, 9405, 9410, 9414, 9422, 9423, 9424, 9426, 9428, 9429, 9430, 9435, 9436, 9441, 9442, 9445, 9449, 9452, 9467, 9468, 9471, 9472, 9480, 9546, 9566
Cat/Drug Effects in
 9507, 9510, 9511, 9519, 9521, 9536, 9537, 9546
Cat/Learning in
 9383, 9404
Cat/Lesions in
 9371, 9375, 9381, 9382, 9383, 9385
Catalepsy (SEE Mental Disorder, Neurosis, Psychosis)
Categorical Behavior
 9294, 9322, 9329, 9334, 9636, 9639, 9664
Catharsis (SEE Therapeutic Process)
Cathexis (SEE Affect, Psychoanalytic Theory)
Catholicism (SEE Religion)
Census Studies (SEE Population Characteristics)
Central Nervous System (SEE Nervous System/Central)
Cerebral Cortex (see also Visual Cortex)
 9371, 9378, 9379, 9380, 9385, 9393, 9394, 9396, 9398, 9409, 9421, 9424, 9429, 9433, 9438, 9441, 9442, 9443, 9445, 9448, 9449, 9450, 9455, 9463, 9467, 9534, 9537, 10356, 10409, 10485
Cerebral Dominance (SEE Cerebral Cortex, Laterality)
Cerebral Palsy (SEE Physical Handicap, Nervous System/Disorder of)
Cerebral Thrombosis (SEE Brain Disorder, Cardiovascular Disorders)
Cerebrovascular Disorder (SEE Brain Disorder, Cardiovascular Disorders)
Certainty (see also Probability)
 9286, 9309, 9790, 10077, 11099
Character (SEE Personality, Ethics)
Character Disorder (see also Emotional Disturbance)
 10093, 10218, 10315, 10324, 10332
Cheating (SEE Deception)
Check List (SEE Inventory)
Chicken
 9573, 9594
Child Abuse
 10230, 10449
Child Guidance (SEE Psychotherapy/Children, Guidance/Educational)
Child Psychiatry (see also Psychotherapy/Children, Schizophrenia/Childhood, Childhood/Psychosis in)
 9721, 10043, 10418, 10745
Child Rearing (see also Parent-Child Relations)
 9722, 9725, 9731, 9732, 9757, 9766, 9802, 9805, 10086, 10271, 10281, 10535, 11000
Childhood & Children (see also next headings, Gifted, Student/Elementary School, Language Development, Mental Retardation)
 9266, 9597, 9601, 9617, 9618, 9621, 9627, 9628, 9721, 9973, 10018, 10282, 10432, 10479, 10498
Childhood/Ability in
 9652, 9664, 9668, 9670, 9678, 9679, 9681, 9682, 9683, 9684, 9698, 9729, 9746, 9792, 10623, 10625, 10673, 10678, 10903, 10962, 10963, 10994
Childhood/Behavior Problems in
 9706, 10135, 10172, 10412, 10619, 10645, 10683, 10685, 10712, 10714, 10715, 10744, 10747, 10750, 10860
Childhood/Concepts & Problem Solving in

9630, 9631, 9636, 9638, 9643, 9646, 9648, 9649, 9650, 9651, 9652, 9653, 9655, 9656, 9658, 9659, 9660, 9662, 9663, 9664, 9666, 9665, 9666, 9667, 9668, 9670, 9671, 9672, 9673, 9674, 9675, 9677, 9682, 9684, 9746, 10468, 10498, 10541, 10614, 10718, 10733, 10971, 10995, 11050
Childhood/Development in (see also Age Differences-Children)
 9596, 9603, 9607, 9611, 9613, 9623, 9625, 9628, 9629, 9633, 9644, 9648, 9650, 9656, 9658, 9659, 9660, 9661, 9663, 9674, 9679, 9682, 9683, 9684, 9691, 9693, 9694, 9699, 9701, 9709, 9713, 9714, 9721, 9740, 9746, 10022, 10196, 10422, 10456, 10643, 10716, 10741, 10923, 10971, 10974, 11009
Childhood/Disadvantaged (see also Socioeconomic Status)
 9623, 9624, 9651, 9705, 9709, 9717, 9735, 9736, 9808, 10135, 10539, 10619, 10629, 10665, 10669, 10680, 10791, 10848, 10854, 10880, 10899, 10901, 10903, 10908, 10915, 10917, 10941, 10955, 10956, 10963, 10981, 10984, 10986, 10987, 10988, 10990, 10992, 10996, 11000, 11002, 11004, 11019, 11029, 11051
Childhood/Emotional Disturbances in
 10020, 10022, 10059, 10227, 10331, 10333, 10520, 10533, 10683, 10684, 10741, 10744, 10745, 10747, 10748, 10749, 10750, 10768, 10795, 10831
Childhood/Family Relations in (SEE Parent-Child Relations, Family Relations)
Childhood/Gifted (SEE Gifted)
Childhood/Handicapped
 10455, 10456, 10466, 10467, 10468, 10469, 10471, 10473, 10486, 10488, 10490, 10558, 10700, 10702, 10704, 10707
Childhood/Hyperactivity in (SEE Childhood/Behavior Problems in)
Childhood/Learning in (see also Achievement/Academic-Elementary School, Student/Elementary School, School Learning)
 9363, 9624, 9630, 9631, 9632, 9633, 9634, 9635, 9636, 9637, 9638, 9639, 9640, 9642, 9645, 9650, 9651, 9652, 9671, 9673, 9675, 10539, 10919, 10937, 10962, 10991, 11050, 11051, 10724
Childhood/Mental Retardation in (SEE Mental Retardation)
Childhood/Perception in
 9389, 9604, 9660, 9666, 9685, 9686, 9687, 9688, 9689, 9690, 9691, 9692, 9693, 9694, 9695, 9696, 9722, 10716, 10903, 10919, 10933, 10974
Childhood/Personality in
 9603, 9608, 9692, 9697, 9698, 9699, 9700, 9701, 9702, 9703, 9704, 9705, 9707, 9721, 9723, 9726, 9729, 9980, 10596, 10623, 10629, 10658, 10875, 10896, 10962, 10979, 10991, 11019
Childhood/Physical Illness in
 10090, 10496, 10507, 10550, 10558, 10566, 10571, 10831
Childhood/Play in (SEE Childhood/Social Behavior in)
Childhood/Preschool
 9598, 9624, 9630, 9636, 9641, 9647, 9649, 9654, 9655, 9656, 9657, 9659, 9664, 9666, 9674, 9680, 9683, 9687, 9694, 9708, 9709, 9712, 9717, 9718, 9731, 10596, 10610, 10643, 10683, 10704, 10736, 10826, 10919, 10923, 10937, 10962, 10973, 10974, 10981, 10982, 10984, 10986, 10989, 10990, 10991, 10992, 10996, 11004, 11016, 11039, 11047, 11054
Childhood/Psychosis in
 10125
Childhood/Psychotherapy (SEE Psychotherapy/Children)
Childhood/Retarded (SEE Mental Retardation)
Childhood/Schizophrenia in (SEE Schizophrenia/Childhood)
Childhood/Social Behavior in
 9636, 9698, 9703, 9707, 9708, 9709, 9710, 9711, 9712, 9713, 9714, 9715, 9716, 9717,

- 9718, 9719, 10643, 10654, 10704, 10858, 10962, 11004
Chlordiazepoxide (SEE Tranquilizer)
Chlorpromazine
 9486, 9510, 9520, 9533, 9539, 10164, 10172, 10402
Choice Behavior (see also Decision Making, Learning/Probability)
 9225, 9277, 9354, 9544, 9585, 9705, 9847, 10249, 11099
Chromosome (SEE Genetics)
City (SEE Urban & Suburban Environment)
Civil Rights (SEE Social Movements, Integration, Law)
Class (SEE Social Structure, Socioeconomic Status)
Classical Conditioning (SEE Conditioning/Classical)
Classification (see also Selection, Categorical Behavior)
 9152, 9355, 9453, 9462, 9630, 9649, 9655, 9674, 9792, 9981, 10007, 10168, 10211, 10214, 10291, 10318, 10319, 10380, 10525
Classroom (see also Education, School, Teaching)
 9621, 10283, 10600, 10615, 10624, 10746, 10750, 10839, 10854, 10862, 10865, 10907, 10927
Cleft Lip & Palate (SEE Speech/Defective)
Clergy (SEE Religion)
Client-Centered Therapy (SEE Psychotherapy/Methods in)
Climate (SEE Environment, Temperature)
Clinic (see also Community Services, Hospital, Treatment/Outpatient)
 10054, 10144, 10397, 10424, 10580, 10582
Clinical Judgment (see also Psychodiagnosis)
 10061, 10065, 10183, 10209, 10268, 10318, 10319, 10348, 10365, 10383, 10451
Clinical Psychology
 9153, 9154, 9157, 10014, 10027, 10028, 10051, 10608, 10715
Cluster Analysis (SEE Factor Analysis, Statistics)
Coalition Formation (SEE Group/Small)
Cochlea (SEE Ear)
Coding (SEE Categorical Behavior, Problem Solving, Display)
Cognition (see also Thinking, Categorical Behavior)
 9192, 9270, 9274, 9344, 9349, 9595, 9606, 9642, 9644, 9649, 9653, 9656, 9664, 9821, 9824, 10340, 10367, 10484, 10621, 10726, 10731, 10732, 10736, 10797, 10896, 10918, 10924, 10928, 10967, 11009, 11019, 11045, 11060, 11097
Cognitive Dissonance (SEE Attitude Change, Dissonance)
Cognitive Style
 9319, 9692, 9731, 9873, 9948, 9955, 9964, 9978, 10597, 10863, 10926, 11002
Colitis (SEE Sexual Behavior, Sexual Behavior-Animal)
Cold (SEE Temperature)
College (see also Education, School, Student/College)
 9167, 10039, 10595, 10609, 10620, 10622, 10627, 10633, 10635, 10701, 10828, 10844
College Counseling (SEE Counseling, Guidance/Educational, Guidance/Vocational)
College Student (SEE Student/College)
College Success (SEE Achievement/Academic College)
Color (see also Color Vision)
 9197, 9204, 9208, 9213, 9216, 9217, 9218, 9284, 9285, 9338, 9480, 9581, 9598, 9666
Color Vision
 9216, 9217, 9218, 9524
Communication (see also Communication/Nonverbal, Information, Language, Speech, Verbal Behavior)
 9154, 9186, 9735, 9782, 9819, 9821, 9822, 9833, 9844, 9849, 9875, 9876, 9883, 9884, 9885, 9900, 9902, 9913, 9962, 10180, 10220, 10266, 10267, 10288, 10309, 10333, 10395, 10447, 10457, 10496, 11016, 11044
Communication/Animal (SEE Communica-
 tion, Vocalization)
Communication/Mass (see also Television, Advertising)
 9876, 9899, 11012, 11035
Communication/Nonverbal
 9853, 9860, 9869, 10209, 10333, 10361, 10451, 10696, 10799, 10852, 10970
Community (see also Culture, Group)
 9848, 9893, 10180, 10192, 10278, 10322, 10421, 10423, 10446, 10575, 10609, 10639, 10908
Community Services (see also Clinic, Mental Health)
 9802, 9808, 9917, 10029, 10033, 10035, 10036, 10040, 10044, 10229, 10242, 10255, 10412, 10413, 10422, 10426, 10575, 10576, 10577, 10578, 10579, 10580, 10581, 10582, 10583, 10584, 10585, 10586, 11000
Comparative Psychology (see also Animal Psychology)
 9162, 9363, 9476, 9488, 9561, 9565, 9566
Competition (see also Conflict, Cooperation, Motivation)
 9715, 9720, 9841, 9857, 9858, 10738, 10749, 10894, 11054
Complexity (see also Cognitive Style, Stimulus)
 9351, 9696
Comprehension (see also Thinking, Reading)
 9341, 9342, 9735, 10980
Compulsion (SEE Obsession-Compulsion)
Computer
 9163, 9174, 9175, 9176, 9177, 9178, 9618, 9996, 10682, 10929, 10978, 11008, 11012, 11013, 11033, 11052, 11104, 11105, 11107
Concentration Camp (SEE Prison, War)
Concept (see also Childhood/Concepts & Problem Solving in, Concept Formation, Thinking)
 9347, 9349, 9350, 9351, 9733, 10251, 10541, 10867, 10909, 10913, 10936, 10939, 10995, 11014, 11033
Concept Formation (see also Childhood/Concepts & Problem Solving in)
 9352, 10380
Conditioned Emotional Response
 9523
Conditioned Galvanic Skin Response (SEE Galvanic Skin Response)
Conditioned Reflex (SEE Conditioned Response, Reflex)
Conditioned Response
 9298, 9471, 9545, 9575, 9644, 10005
Conditioning (see also next headings)
 9194, 9577, 9631, 9868, 9902, 10395, 10464, 10759
Conditioning/Avoidance (SEE Learning/Avoidance, Rat/Avoidance & Avoidance Learning in)
Conditioning/Classical
 9305, 9404, 9408, 9424, 9467, 9575
Conditioning/Escape (SEE Escape)
Conditioning/Eyelid
 9408
Conditioning/Interceptive
 9298, 9357, 9468, 9545
Conditioning/Operant (see also Rat/Conditioning in)
 9299, 9304, 9424, 9578, 10110, 10124, 10194, 10321, 10404, 10748, 11042
Conditioning/Verbal (SEE Learning/Verbal)
Conference (SEE Symposium)
Confidence Judgment (SEE Certainty)
Conflict (see also Frustration, Learning/Avoidance, Interpersonal Processes)
 9600, 9619, 9718, 9820, 9854, 9872, 9929, 10025, 10152, 10333, 10659, 10825
Conformity (see also Authoritarianism, Dominance, Expectation, Interpersonal Influence, Social Influence)
 9764, 9854, 10194, 10627, 10708, 11090
Congress (SEE Symposium)
Connotation (SEE Meaning, Semantics)
Conscience (SEE Value & Values, Ethics, Motivation)
Conscious States (see also Awareness)
 9139, 9141, 9272, 9368, 9786, 9981, 10069, 10309
Conservation (SEE Childhood/Concepts & Problem Solving in)
Conservatism (SEE Political Behavior, Personality Trait)
Consonance (SEE Dissonance)
Constancy (SEE Gestalt Psychology, Visual Perception, Perception)
Consumer Behavior (see also Advertising)
 9164, 11097, 11098, 11099
Contagion (SEE Interpersonal Influence, Social Influence)
Content (SEE Information, Meaning)
Context
 9338, 9830, 9905, 10471
Contraception (SEE Birth Control)
Contribution & Criticism
 9150, 9169, 9185, 9368, 9384, 9669, 9696, 9781, 9836, 9871, 10198, 10370, 10400, 10518, 10519, 10521, 10522, 10537
Control (see also Display)
 9722, 11106, 11108
Control/Internal-External
 9705, 9937, 9966, 9967, 9987, 10384, 10440, 10454, 10459, 10644, 10755, 10998, 11117
Convulsion (SEE Electroconvulsive Shock, Nervous System/Disorder of, Epilepsy)
Cooperation
 9684, 9720, 9841, 9857, 9858, 9859, 10369, 10562, 11077
Coordination (SEE Motor Performance)
Coping Behavior (SEE Adjustment/Personal & Social)
Copulatory Behavior (SEE Sexual Behavior-Animal)
Correlation (see also Factor Analysis, Statistics)
 9166, 9170, 9184, 9974, 9992, 9993, 10549, 11052
Cortex (SEE Cerebral Cortex, Visual Cortex)
Counseling (see also Guidance/Educational, Guidance/Vocational, Interview)

9740, 9912, 9948, 10006, 10344
- Electrical Activity** (see also Potential/Evoked)
9160, 9370, 9374, 9377, 9379, 9381, 9390, 9393, 9394, 9395, 9396, 9397, 9405, 9406, 9418, 9419, 9420, 9421, 9422, 9423, 9424, 9426, 9427, 9428, 9429, 9430, 9431, 9432, 9433, 9434, 9435, 9436, 9437, 9438, 9439, 9440, 9441, 9442, 9444, 9447, 9448, 9450, 9459, 9474, 9477, 9530, 9537, 9543, 9550, 10142, 10356, 10483, 10493, 11000
- Electrocardiogram** (SEE Electrophysiology, Cardiovascular Processes, Heart)
- Electroconvulsive Shock**
9362, 9407
- Electroconvulsive Shock Therapy**
10057, 10061, 10139, 10141, 10351, 10354, 10355, 10396
- Electrode** (SEE Electroencephalography, Electrical Activity)
- Electrodermal Response** (SEE Galvanic Skin Response)
- Electroencephalography** (see also Arousal)
9267, 9272, 9433, 9444, 9446, 9447, 9448, 9451, 9453, 9454, 9461, 9462, 9466, 9467, 9470, 10013, 10021, 10141, 10163, 10164, 10380, 10390, 10489, 10511, 10512, 10528
- Electroencephalography-Animal**
9371, 9381, 9382, 9400, 9432, 9438, 9458, 9468, 9469, 9470, 9521, 9526, 9531, 9537
- Electromyography** (see also Eye Movement, Muscle)
9342, 9525, 10099
- Electrophysiology**
9375, 9425, 9427, 9431, 9439, 9454, 10150
- Electroretinography** (SEE Electrophysiology, Retina)
- Elimination**
9357, 9488, 9557, 9559, 9583, 10059, 10124, 10126, 10204, 10331, 10364, 10388, 10395, 10565, 10569
- Embedded Figures** (SEE Test/Intelligence, Dependency)
- Embryo** (see Pregnancy)
- Emotion** (see also Affect, Depression)
9150, 9281, 9283, 9488, 9554, 9571, 9728, 9786, 9796, 9811, 9853, 9885, 9920, 9930, 9961, 9987, 9988, 9989, 10016, 10032, 10060, 10109, 10185, 10341, 10355, 10448, 10555, 10605, 10681, 10742, 10799, 10846, 10870, 11055
- Emotional Disturbance** (see also Childhood/Emotional Disturbances in)
10050, 10160, 10170, 10171, 10221, 10257, 10335, 10340, 10342, 10560, 10570, 10590
- Emotionality** (see also Emotion)
9274, 9401, 10058
- Empathy** (see also Therapeutic Process)
9938, 10430, 10443
- Employee** (SEE Personnel/Industrial)
- Encephalitis** (SEE Brain Disorder)
- Encoding** (SEE Categorical Behavior, Memory, Thinking)
- Encounter Group** (SEE Sensitivity, Psychotherapy/Group)
- Endocrine** (SEE Gland, Hormone)
- Endogenous-Exogenous Factor** (SEE Etiology)
- Engineering Psychology**
11077, 11100, 11101, 11102, 11105, 11107
- Engineers & Engineering** (SEE Occupation)
- Enuresis** (SEE Elimination)
- Environment** (see also Environment-Animal, Isolation, Temperature, Deprivation/Sensory, Urban & Suburban Environment, Rural Environment)
9363, 9616, 9708, 9712, 9792, 9950, 9971, 10285, 10421, 10460, 10532, 10607, 10620, 10650, 10680, 10908, 10936, 10958, 10968, 11079, 11090, 11096
- Environment-Animal** (see also Isolation, Deprivation/Sensory, Temperature)
9188, 9363, 9367, 9564, 9568
- Epilepsy**
9405, 9470, 10009, 10021, 10148, 10149, 10307, 10489, 10504, 10505, 10506, 10507, 10508, 10509, 10510, 10511, 10513, 10520, 10831
- Epinephrine**
9367
- EPPS** (SEE Test/Personality)
- Equipment** (SEE Apparatus, Apparatus-Animal)
- Ergonomics** (SEE Engineering Psychology, Industrial Psychology)
- Error**
9171, 9283, 9287, 9291, 9899, 10744, 11110
- Escape**
9585
- Esthetics** (SEE Aesthetics)
- Estimation**
9225
- Ethics** (see also Value & Values, Philosophy)
9140, 9149, 9927, 10015, 10072, 10432
- Ethnology**
9597, 9620, 9621, 9626, 9641, 9701, 9715, 9769, 9771, 9772, 9773, 9774, 9775, 9776, 9777, 9778, 9779, 9784, 9803, 9804, 9817, 9822, 9830, 9867, 9878, 10038, 10095, 10291, 10326, 10379, 10529, 10539, 10618, 10632, 10633, 10636, 10649, 10655, 10673, 10730, 10754, 10773, 10841, 10848, 10854, 10891, 10901, 10918, 10921, 10945, 10991, 11005
- Etiology**
10324, 10331, 10338, 10354, 10363, 10473, 10476, 10479, 10525, 10550, 11115
- Eugenics** (SEE Genetics)
- Evaluation** (see also Work & Work Analysis)
10212, 10488, 10844, 10853, 11015, 11081
- Evoked Potential** (SEE Potential/Evoked)
- Evolution** (SEE Comparative Psychology, Science, Theory)
- Examination** (SEE Educational Measurement, Test/Achievement, Test & Testing)
- Exceptional Child** (SEE Education/Special, Education/Special-Remedial, Education/Special-Mental Retardation, Gifted, Childhood/Handicapped)
- Excitation** (SEE Inhibition, Potential/Evoked, Stimulation)
- Excretion** (SEE Elimination)
- Executive** (SEE Management)
- Exercise** (SEE Work)
- Exhibitionism** (SEE Sexual Deviation)
- Existential Psychology & Psychiatry** (SEE Existentialism)
- Existentialism**
10406, 10767
- Expectation & Expectancy** (see also Aspiration, Set)
9181, 9185, 9245, 9275, 9281, 9305, 9316, 9353, 9437, 9617, 9705, 9794, 9858, 9874, 9889, 9894, 9937, 10393, 10421, 10442, 10487, 10604, 10620, 10654, 10668, 10728, 10854, 10858, 10906, 10947
- Experience** (see also Familiarity, Practice)
9775, 9886, 10060, 10669, 10860, 10920
- Experience/Early**
9490, 9567, 9568, 9569
- Experimental Design**
9182, 9184, 9240, 9269, 9306, 9927, 10171, 11056
- Experimental Psychology**
- Experimentation & Experiments** (see also Research, Research Methods)
9145, 9181, 9183, 9185, 9844, 10000
- Experimenter Bias** (SEE Bias, Experimentation & Experiments)
- Expert Testimony** (SEE Law, Clinical Judgment)
- Exploratory Behavior** (see also Rat/Activity in)
9398, 9570
- Extinction** (see also Extinction/Resistance to, Inhibition, Learning, Rat/Extinction in)
9484, 9575, 9631, 10110
- Extinction/Resistance to**
9589
- Extrasensory Perception** (SEE Parapsychology)
- Extraversion-Introversion**
9576, 9946, 9948, 10244, 10742
- Eye** (see also Retina, Vision)
9203, 9215, 9219, 9245, 9394, 9395, 9507, 9558, 9853, 10222, 10317, 10375, 10465
- Eye Movement** (see also Rapid Eye Movement)
9196, 9217, 9220, 9221, 9290, 9426, 10210, 10464, 10510
- Eyelid Conditioning** (SEE Conditioning/Eyelid)
- Facial Expression** (SEE Communication/Nonverbal, Social Perception)
- Factor Analysis** (see also Correlation)
9167, 9675, 9746, 9758, 9914, 9956, 9982, 9984, 9990, 9991, 9996, 10065, 10358, 10548, 10673, 10901, 11064
- Faculty** (SEE Teacher)
- Failure** (SEE Achievement, Emotion, Anxiety)
- Faking** (SEE Deception)
- Familiarity** (see also Experience, Practice)
9308, 9334, 9352, 9615, 9616, 9696, 9914, 9948
- Family** (see also next headings, Marriage, Mother, Father)
9596, 9707, 9721, 9737, 9750, 9787, 9800, 9801, 9803, 9949, 10086, 10169, 10271, 10279, 10282, 10302, 10306, 10393, 10412, 10449, 10535, 10639, 10908, 10917, 10947
- Family Planning** (SEE Birth Control)
- Family Relations** (see also Parent-Child Relations)
9605, 9721, 9726, 9730, 9742, 9756, 9800, 9803, 9806, 9939, 10008, 10087, 10193, 10302, 10379, 10423, 10558, 10560, 10583, 10961
- Family Therapy**
10084, 10086, 10087, 10088, 10413, 10448
- Fantasy** (see also Dream & Dreaming, Imagery)

BRIEF SUBJECT INDEX

9286, 10108, 10979
Farming (SEE Rural Environment, Occupation)
Father (see also Parent-Child Relations)
 9642, 9707, 9727, 9734, 9747, 9951, 10535, 10729, 10739, 10870, 10917, 10930
Fatigue
 9236, 9242, 9427
Fear (see also Anxiety, Emotion, Motivation, Phobia, Threat)
 9373, 9627, 9941, 10021, 10081, 10104, 10106, 10347, 10555
Feeble-mindedness (SEE Mental Retardation)
Feedback (see also Reinforcement)
 9190, 9201, 9203, 9274, 9284, 9293, 9296, 9336, 9841, 9857, 9863, 9866, 10099, 10660, 10664, 10714, 10760, 10788, 10837, 10902, 10910, 10985
Feeding (SEE Food Intake)
Feeling (SEE Emotion)
Femininity (SEE Sex Role)
Fetishism (SEE Sexual Deviation, Sexual Disorder)
Fetus (SEE Pregnancy)
Field Dependence (SEE Dependency)
Field Study (SEE Research Methods, Observation)
Fighting (SEE Aggression, Hostility)
Figural Aftereffect (SEE Aftereffect)
Figure (SEE Stimulus, Pattern, Perception/Form & Shape)
Film
 9558, 9819, 9885, 10441, 10788, 10837, 10852, 10855, 11018
Fine Arts (SEE Aesthetics, Literature, Music)
Finger (SEE Hand, Motor Performance, Body)
Fish
 9484, 9568
Flavor (SEE Taste)
Flicker Fusion (SEE Vision)
Food
 9514, 10147, 10246, 10342, 10587
Food Deprivation
 9295, 9559, 9572, 9573, 10512
Food Intake
 9363, 9386, 9398, 9402, 9458, 9473, 9529, 9548, 9573, 9574, 9586, 10340, 10355, 10395, 10554
Food Preference (SEE Food Intake)
Forced Choice (SEE Choice Behavior, Item, Response, Testing Methods)
Foreign Relations (SEE International Relations)
Foreman (SEE Management)
Forgetting (SEE Extinction, Learning, Memory, Retention)
Form Perception (SEE Perception/Form & Shape)
Foster Home (SEE Family, Community Services)
France
 9164, 9763, 9799, 10168, 10640
Freud/S. (SEE Psychoanalysis, Psychoanalytic Theory)
Friendship (SEE Interpersonal Processes, Interpersonal Attraction)
Frigidity (SEE Sexual Disorder)
Frog
 9427, 9477, 9566
Frontal Lobotomy (SEE Brain Lesion, Brain Lesion-Animal)
Frustration (see also Aggression, Conflict, Emotion)
 9280

Galvanic Skin Response
 9555, 10021, 10130, 10133, 10221, 10390
Game (see also Recreation)
 9643, 9718, 9720, 9840, 9841, 9864, 9872, 10811, 11054
Game Theory (SEE Choice Behavior, Decision Making, Learning/Probability)
Gastrointestinal Processes (SEE Digestive System)

Generalization
 9276, 9295, 9305, 9343, 9664, 9719, 10290, 10893
Generalization/Stimulus (SEE Transfer, Generalization)
Genetics
 9153, 9162, 9170, 9501, 9553, 9971, 10009, 10012, 10020, 10274, 10307, 10343, 10360, 10373, 10408, 10492, 10514, 10519, 10521, 10524, 10531, 10537, 10742
Genetics-Animal
 9491, 9552, 9592
Genius (SEE Gifted)
Geriatrics (see also Gerontology)
 9832, 10088, 10350, 10587, 10588, 10589, 10590, 10591
Germany
 9796, 9796, 9825, 9968, 10223, 11063
Gerontology (see also Geriatrics)
 9754, 9755, 9756, 10611
Gestalt Psychology
 9870, 9938
Gifted
 9656, 10686, 10687, 10688, 10800, 10868
Gland (see also Epinephrine, Hormone)
 9376, 9886, 10022, 10573
Goal (SEE Motivation)
Goodenough Test (SEE Projective Technique)
Government
 9766, 10272, 10329, 10426, 10612, 10672
Grades & Grade-Point Average (SEE Achievement/Academic, Achievement/Academic-College, Achievement/Academic-Elementary School)
Grammar
 9676, 9912, 10471
Graphology (SEE Writing)
Great Britain
 9681, 10051, 10224, 10279, 10436, 10452
Group (see also next headings, Community, Culture, Interpersonal Processes)
 9708, 9767, 9768, 9839, 9842, 9846, 9852, 9856, 9861, 9862, 9864, 9866, 9870, 9881, 9919, 9934, 10094, 10280, 10434, 10442, 10472, 10626, 10631, 10639, 10647, 10655, 10760, 10763, 10775, 10778, 10788, 10791, 10797, 10815, 10850
Group Discussion
 9843, 9862, 9878, 10093, 10140, 10594, 10843, 10850, 10862, 10870, 11017
Group Dynamics
 9708, 9795, 9839, 9842, 9843, 9850, 9852, 9854, 9855, 9856, 9859, 9861, 9862, 9865, 9874, 9883, 10047, 10085, 10182, 10630, 10655, 10760, 10785, 10815, 11044
Group Influence (SEE Social Influence)
Group Structure (SEE Group, Role)
Group Therapy (SEE Psychotherapy/Group)
Group/Ethnic (SEE Ethnology)
Group/Small (see also Interpersonal Processes)
 9838, 9850, 9859, 9869, 9873, 9878, 10641, 10778, 10785, 10862
Guidance (SEE next headings, Counseling)
Guidance/Child (SEE Psychotherapy/Children, Guidance/Educational)
Guidance/Educational
 10642, 10650, 10677, 10705, 10756, 10757, 10759, 10763, 10764, 10768, 10772, 10775, 10777, 10779, 10780, 10781, 10782, 10786, 10787, 10793, 10794, 10796, 10800, 10801, 10802, 10825, 10868
Guidance/Vocational
 9157, 10642, 10755, 10763, 10766, 10784, 10787, 10798, 11065
Guilt (SEE Emotion, Motivation)
Guinea Pig (SEE Animals)
Gustation (SEE Taste)

Hallucinogen (SEE Drugs, Lysergic Acid Diethylamide)
Halo Effect (SEE Rating Scale)
Hand (see also Body, Motor Performance)
 10316, 10456
Handedness (SEE Laterality)
Handicap (SEE Childhood/Handicapped, Physical Handicap, Blindness, Deafness & Hearing Disorder)
Handling (see also Experience/Early)
 9490, 9548, 9567
Handwriting (SEE Writing)
Headache (SEE Illness)
Hearing (SEE Audition)
Hearing Loss (SEE Audition, Deafness & Hearing Disorder)
Hearing/Hard of (SEE Deafness & Hearing Disorder)
Heart (see also Blood, Blood-Animal, Blood Pressure, Cardiovascular Processes, Heart Rate)
 9507
Heart Rate
 9211, 9274, 9283, 9298, 9357, 9381, 9407, 9555, 9575, 9679, 9922, 10021, 10221, 10390, 10534
Heat (SEE Temperature)
Height (SEE Physique)
Helping Behavior (SEE Interpersonal Processes)
Heredity (SEE Genetics)
High School (SEE School, Student/High School, Adolescence)
Higher Education (SEE College)
Hippocampus
 9387, 9397, 9406, 9432
History (see also Psychology/History of)
 9760, 10032, 10907
Hoarding (SEE Instinctive Behavior)
Homicide (SEE Crime & Criminals, Suicide)
Homosexuality
 10108, 10116, 10118, 10293, 10295, 10297
Honesty (SEE Deception)
Hormone (see also Epinephrine)
 9375, 9392, 9489, 9490, 9491, 9508, 9532, 9538, 9557, 10022, 10030, 10364, 10524, 10573
Hospital & Hospitalization (see also Clinic, Institution & Institutionalization, Mental Hospital & Hospitalization)
 10038, 10169, 10185, 10186, 10188, 10189, 10191, 10192, 10197, 10520, 10563, 10589, 11061, 11093
Hostility (see also Aggression)
 9150, 9942, 9984, 9987, 9988, 9989, 9997, 10106, 10152, 10657
Hue (SEE Color)
Human Engineering (SEE Engineering Psychology)
Humor (see also Literature, Language, Emotion)
 9281, 9876, 9942
Hunger (SEE Food Deprivation, Motivation)
Husband (SEE Marriage)
Hypnosis
 9220, 9268, 9269, 9270, 9271, 9272, 9273, 9276, 9763, 9918, 10058, 10115, 10136, 10138, 10555, 10692, 10693
Hypnotherapy (SEE Hypnosis, Psychotherapy/Methods in)
Hypothalamus
 9388, 9392, 9402, 9408, 9412, 9413, 9415, 9465, 9491, 9510, 9511, 10293, 10410
Hysteria & Hysterics (see also Mental Disorder, Neurosis, Psychosis)
 10356, 10377, 10409, 10505

Id (SEE Psychoanalytic Theory)

Identification

9231, 9345, 9350, 9351, 9597, 9701, 9768, 9772, 9951, 10269, 10403

Identity

9600, 9789, 9926, 9930, 9932, 10299, 10988, 11079

Illegitimate Pregnancy (SEE Pregnancy, Mth-

BRIEF SUBJECT INDEX

- er)
Illness (see also Disease)
 9363, 10007, 10023, 10038, 10099, 10146,
 10153, 10164, 10225, 10241, 10551, 10553,
 10555, 10568, 10569, 10573, 10574, 11111
Illumination (SEE Brightness, Environment)
Illusion
 9142, 9194, 9195, 9196, 9197, 9198, 9199,
 9212
Image (see also Self-Perception, Social Per-
 ception, Body)
 9192, 9560, 9566
Imagery
 9193, 9220, 9310, 9331, 10060, 10069,
 10098, 10104, 10109, 10464
Imagination (SEE Fantasy, Cognition, Think-
 ing)
Imitation (see also Instinctive Behavior, In-
 terpersonal Processes, Model)
 9636, 9717, 9719, 10456, 10543, 10922,
 11004
Impression Formation (SEE Social Perception)
Imprinting (SEE Instinctive Behavior, Ex-
 perience/Early)
Incentive (see also Motivation, Reward, Rein-
 forcement)
 9279, 9837, 10273, 10726
Incest (SEE Sexual Deviation)
Incidental Learning (SEE Learning)
Income (SEE Money, Socioeconomic Status)
Independency (SEE Dependency)
India
 9768, 9791, 9939, 10612, 10900, 11035
Indian/American (SEE Ethnology)
Individual Differences
 9266, 9293, 9319, 9479, 9618, 9730, 9733,
 9913, 10210, 10355, 10755, 10926, 11078
Industrial Psychology (see also Business, Per-
 sonnel/Industrial)
 9157, 11057, 11058, 11059, 11062, 11102
Industry (SEE Business, Personnel/Industrial)
Infancy (see also Neonate)
 9596, 9601, 9610, 9612, 9613, 9614, 9615,
 9616, 10175
Influence (SEE Interpersonal Influence, Persu-
 sion, Social Influence)
Information (see also Communication, Infor-
 mation Theory, Language)
 9152, 9163, 9175, 9181, 9191, 9213, 9285,
 9296, 9347, 9349, 9356, 9544, 9643, 9652,
 9875, 9888, 10120, 10632, 10975, 10998,
 11066, 11081, 11097, 11103, 11104, 11105
Information Retrieval (SEE Information, Com-
 puter)
Information Theory (see also Information)
Inheritance (SEE Genetics)
Inhibition (see also Extinction, Interference)
 9312, 9135, 9336, 9358, 9369, 9373, 9390,
 9429, 9477, 9525, 10295, 10297
Inkblot (SEE Projective Technique, Rorschach
 Test)
Innocence
Insecurity (SEE Dependency, Neurosis)
Insight (SEE Problem Solving, Thinking,
 Self-Perception, Social Perception, Thera-
 peutic Process)
Instinctive Behavior (see also Sexual Behav-
 ior/Animal)
 9569
Institute (SEE Organizations, College)
Institution & Institutionalization (see also
 Hospital & Hospitalization, Mental Hos-
 pital & Hospitalization)

 10617, 10631, 10643, 10760, 10761, 10771,
 10779, 10780, 10788, 10799, 10810, 10811,
 10817, 10818, 10825, 10829, 10840, 10861,
 10862, 10895, 10909, 10936, 10972, 10977,
 11004, 11075, 11077, 11093
Interresponse Interval (SEE Interval/Time)
Intersensory Processes
 9190, 9191, 10378, 10466, 10495, 10690
Interval/Interstimulus
 9223, 9300, 9307, 9311, 9313, 9322, 9334,
 9377, 9420, 9463
Interval/Time
 9201, 9205, 9207, 9211, 9226, 9234, 9244,
 9310, 9317, 9402, 10497
Interview & Interviewing (see also Counseling,
 Guidance/Educational, Guidance/Voca-
 tional, Psychotherapy)
 9748, 9769, 9860, 9866, 9891, 10062, 10077,
 10110, 10348, 10361, 10451, 10759, 10772,
 10789, 10805, 10807
Introversion (SEE Extraversion-Introversion)
Inuition (SEE Thinking, Cognition)
Inventory (see also Questionnaire, Survey)
 9722, 9852, 9996, 10246, 10472, 10622,
 10674, 10764, 10801, 10808, 10810, 10879,
 10880, 10954, 11036
Isolation (see also Alienation)
 9306, 9307, 9344, 9573, 10265, 10395,
 10600
Israel
 9779
Item (see also Test & Testing, Testing Meth-
 ods)
 9826, 9995, 10675, 10950
Japan
 9789, 9796, 9796, 10478, 11043, 11089
Jew (SEE Religion, Ethnology)
Job (see next headings, Occupation, Per-
 sonnel/Industrial, Work & Work Analysis)
Job Evaluation (SEE Occupation, Work &
 Work Analysis)
Job Performance
 9497, 9994, 10393, 10415, 10549, 10836,
 10844, 10954, 11070, 11078, 11080, 11081,
 11082, 11083, 11086
Job Satisfaction
 10765, 10810, 10817, 10819, 10821, 10822,
 10872, 11058, 11084, 11085
Judgment
 9699, 9742, 9768, 9823, 9827, 9836, 9907,
 11056
Judgment/Perceptual (see also Perception, the
 various senses)
 9198
Junior College (SEE College)
Junior High School (SEE School, Student/
 Junior High School)
Juvenile Delinquency (SEE Delinquency/
 Juvenile)
Kibbutz/Israel (SEE Israel)
Kindergarten (SEE Childhood/Preschool)
Kinesthesia (see also Movement)
 9195, 9611, 9967, 10740
Kinship (SEE Family, Culture)
Knowledge of Results (SEE Feedback, Rein-
 forcement, Information)
Korsakov's Psychosis (SEE Alcoholism, Brain
 Disorder)
Labor Relations (SEE Personnel/Industrial,
 Management)
Language (see also next headings, Com-
 munication, Information, Speech, Psycho-
 linguistics, Verbal Behavior)
 9175, 9193, 9324, 9624, 9635, 9670, 9677,
 9900, 9903, 9904, 9906, 9907, 9909, 9913,
 9962, 10062, 10095, 10203, 10471, 10488,
 10703, 10727, 10796, 10991
Language Development
 9647, 9649, 9657, 9661, 9669, 9676, 10363,
 10485, 10515, 10721, 10981, 10984, 11016
Language/Foreign
 9903, 10612, 10934, 10951, 11005
Latent Learning (SEE Learning)
Laterality
 9233, 9234, 9252, 9383, 9398, 10391, 10396,
 10485, 10495
Latin America
 9157, 9667, 9790, 9791, 9794, 9797, 10327,
 10989
Law (see also Government, Political Behavior)
 9672, 9745, 9822, 10138, 10224, 10240,
 10272, 10300, 10432, 10915, 11111
Leadership (see also Management)
 9622, 9712, 9795, 9855, 9866, 9882, 10329,
 10771, 10778, 10813, 10814, 10818, 10819,
 10824, 10850, 10881, 11063, 11092
Learning (see also next headings, Association,
 Conditioning, School Learning, Rat/Learn-
 ing in, Monkey/Learning in, Cat/Learning
 in, Childhood/Learning in)
 9294, 9363, 9606, 9879, 10343, 10440,
 10599, 10659, 10687, 10909, 10975, 11080
Learning Disorders
 10485, 10606, 10684, 10713, 10715, 10717,
 10722, 10723, 10735, 10736, 10741, 10743,
 10768
Learning Model (SEE Model)
Learning Set (SEE Set, Expectation)
Learning Theory
 9162, 9938, 10092, 10102, 10338
Learning Transfer
 9316, 9328, 9352, 9404, 9581, 9673, 10544,
 10545, 11041
Learning/Avoidance (see also Rat/Avoidance
 & Avoidance Learning in)
 9188, 9299, 9362, 9404, 9424, 9585, 9588
Learning/Discrimination (see also Discrimi-
 nation Reversal, Rat/Discrimination in)
 9296, 9308, 9383, 9528, 9640, 10292, 10369
Learning/Escape (SEE Escape)

BRIEF SUBJECT INDEX

Learning/Incidental (SEE Learning)
Learning/Instrumental (SEE Conditioning/Operant Rat/Conditioning in)
Learning/Maze (see also Rat/Maze Learning in)
Learning/Motor
 9268, 9293, 9540, 10005, 10542, 10985
Learning/Over (SEE Learning)
Learning/Paired Associate
 9297, 9302, 9309, 9310, 9311, 9312, 9313, 9314, 9315, 9316, 9327, 9331, 9635, 9637, 9740, 9755, 10539, 10540, 10542, 10686, 10725, 10740, 11041
Learning/Probability
Learning/Reversal (see also Discrimination Reversal)
Learning/Serial
 9306, 9307, 9325, 9332
Learning/Verbal (see also Learning/Paired Associate)
 9276, 9300, 9301, 9304, 9305, 9306, 9308, 9328, 9352, 9635, 10371, 10756, 10790, 11014
Legibility (SEE Display, Writing)
Leisure (SEE Recreation)
Lesion (see also Brain Lesion, Brain Lesion-Animal, Rat/Lesions in, Cat/Lesions in)
 9377, 9512, 10567
Liberalism (SEE Political Behavior, Personality Trait)
Licensing (SEE Law)
Light (see also Brightness, Color)
 9197, 9202, 9205, 9206, 9390, 9430, 9443, 9445, 9455, 9530, 9531, 9602, 10356, 10465, 11108
Light Adaptation (SEE Adaptation/Sensory)
Lighting (SEE Brightness, Environment)
Liking (SEE Interpersonal Attraction)
Linguistics (SEE Language, Psycholinguistics)
Listening (SEE Attention, Audition, Speech Perception)
Literature
 9139, 9915, 9916, 10198, 10199, 10200, 10202, 10205, 10320, 10979, 11009
Lobotomy (SEE Brain Lesion, Brain Lesion-Animal)
Localization
 9226, 9245, 9252, 9253, 9263, 9365, 9391, 9405, 9472, 9543, 10466
Logic (see also Thinking)
 10971, 10983, 10995
Loneliness (SEE Isolation, Alienation)
Longitudinal Study (SEE Experimental Design)
Loudness (SEE Audition, Noise, Sound)
Love (SEE Emotion)
Lower Class (SEE Socioeconomic Status)
LSA (SEE Lysergic Acid Diethylamide)
Luminance (SEE Brightness, Environment)
Lying (SEE Deception)
Lysergic Acid Diethylamide
 9432, 9496, 9499, 9501, 9539, 9553, 9918, 10165, 10234, 10408, 10794

MA Scale (SEE Anxiety)
Machine (SEE Apparatus)
Man-Machine Systems (SEE Engineering Psychology)
Management (see also Business, Leadership)
 10415, 11070, 11087, 11088, 11091, 11092
Mania (SEE Mental Disorder, Emotional Disturbance)
Manic-Depressive Psychosis (SEE Depression, Psychosis)
Manifest Anxiety (SEE Anxiety)
Marihuana
 9499, 9529, 9918, 9923, 9924, 9925, 10234, 10794
Marital Problems (see also Family Therapy)
 9968
Marketing & Marketing Research (SEE Consumer Behavior)
Marriage (see also Family, Sexual Behavior)
 9747, 9756, 9801, 9804, 9811, 9812, 9814, 9816, 9968, 10058, 10447, 10568, 10951

Masculinity (SEE Sex Role)
Masking (see also Interference)
 9209, 9227, 9233, 9241, 9243, 9248, 9254, 9258
Masochism (SEE Sexual Deviation)
Mass Behavior (SEE Group, Social Behavior-Human)
Mass Media (SEE Communication/Mass)
Maternal Behavior (see also Mother, Parent-Child Relations, Child Rearing)
 9489, 9490, 9562, 9567
Mathematics (see also Number)
 9165, 9176, 9214, 9831, 10537, 10663, 10666, 10895, 10963, 10969, 11008, 11024, 11033, 11045, 11048, 11054
Mating Behavior (SEE Sexual Behavior-Animal)
Maturation (see also Development)
 9295, 9629, 9689, 9739, 10766
Maudsley Personality Inventory (SEE Test/Personality)
Maze (SEE Learning/Maze, Rat/Maze Learning in, Apparatus-Animal)
Meaning (see also Semantics)
 9144, 9294, 9296, 9672, 9735, 9796, 9849, 9901, 9905, 9910, 10001, 10017, 10202, 11039, 11044
Meaningfulness
 9309, 9311, 9337, 9341, 10536, 10719
Measurement (see also Educational Measurement, Scaling, Statistics)
 9218, 9321, 9655, 9677, 9870, 10592
Mediating Response (SEE Mediation)
Mediation
 9303, 9352, 9389, 9567, 9884, 9885, 10539, 10545, 10940
Medicine (see also Nursing, Physician, Surgery)
 9147, 9159, 9614, 9781, 10023, 10231, 10263, 10520, 10561, 10784
Memory (see also Recall, Recognition, Retention)
 9321, 9322, 9324, 9327, 9331, 9332, 9333, 9336, 9362, 9527, 9636, 9671, 9687, 9755, 10141, 10212, 10646, 10731, 10737
Memory/Short Term
 9230, 9326, 9330, 9331, 9335, 9337, 9338, 10212, 11025
Meningitis (SEE Nervous System/Disorder of)
Menstruation (SEE Biological Rhythms)
Mental Deficiency (SEE Mental Retardation)
Mental Development (SEE Development)
Mental Disorder (see also Neurosis, Psychosis, specific disorders)
 10006, 10007, 10008, 10010, 10159, 10160, 10213, 10272, 10276, 10279, 10300, 10302, 10306, 10307, 10308, 10311, 10313, 10314, 10320, 10321, 10322, 10325, 10326, 10327, 10557, 10584, 10586, 10590
Mental Health (see also Adjustment/Personal & Social, Community Services)
 9917, 10017, 10033, 10035, 10044, 10322, 10329, 10412, 10413, 10416, 10418, 10422, 10423, 10426, 10427, 10428, 10432, 10578, 10579, 10581, 10582, 10583, 10623, 10694
Mental Hospital & Hospitalization (see also Hospital & Hospitalization, Institution & Institutionalization)
 10091, 10176, 10179, 10180, 10183, 10184, 10193, 10195, 10196, 10254, 10272, 10393, 10394, 10402, 10446, 10585, 10589
Mental Hospital/Programs in
 10175, 10177, 10178, 10181, 10182, 10187, 10190, 10194, 10195, 10323
Mental Hygiene (SEE Mental Health)
Mental Patient (SEE Psychiatric Patient)
Mental Processes
 9448, 9499, 9544, 9547, 9746, 9903, 10012, 10392, 10574, 10587, 10588, 10963
Mental Retardation (see also next headings, Learning, Learning Disorders)
 9179, 10004, 10009, 10021, 10022, 10148, 10160, 10192, 10372, 10455, 10508, 10514, 10515, 10516, 10518, 10519, 10520, 10521, 10522, 10524, 10526, 10527, 10528, 10530, 10531, 10532, 10534, 10535, 10536, 10537, 10544, 10716, 10718, 10721, 10725, 10729,

10730, 10738, 10739, 10742
Mental Retardation/Diagnosis of
 10215, 10525, 10538, 10711
Mental Retardation/Education in (SEE Education/Special-Mental Retardation)
Mental Retardation/Learning in
 10515, 10533, 10540, 10541, 10542, 10543, 10544, 10545, 10546, 10686, 10719, 10720, 10724, 10733, 10740
Mental Retardation/Treatment of
 10192, 10514, 10517, 10523, 10527, 10533, 10536, 10547
Mental Retardation/Vocational Rehabilitation & Training in
 10526, 10527, 10547, 10548, 10549, 10720, 10727
Meprobamate (SEE Tranquilizer)
Metalloids
 9367, 9485, 9491, 9504, 9508, 9517, 9534, 9539, 9541, 10057, 10352, 10387, 10553
Method & Methodology (see also Research Methods, Teaching Methods, Experimentation, Measurement, Survey, Experimental Design)
 9162, 9256, 9391, 9451, 9466, 9677, 10145
Metropolitan Area (SEE Urban & Suburban Environment)
Middle Age (SEE Adulthood)
Migration (SEE Social Processes)
Milieu Therapy (SEE Mental Hospital/Programs in, Psychotherapy/Methods in)
Military (see also Personnel/Military)
 10029, 10450, 10802, 11086
Mind (SEE Cognition, Thinking)
Minnesota Multiphasic Personality Inventory (MMPI)
 9274, 9747, 9791, 9944, 9993, 10054, 10076, 10113, 10208, 10225, 10226, 10247, 10798, 10869, 11068
Minority Group (SEE Ethnicity)
MMPI (SEE Minnesota Multiphasic Personality Inventory)
Mobility (SEE Movement, Social Mobility, Socioeconomic Status)
Model (see also Imitation)
 9176, 9178, 9214, 9347, 9356, 9385, 9482, 9675, 9678, 9701, 9718, 9749, 9789, 9831, 9906, 9938, 9981, 10381, 10425, 10543, 10711, 10793, 10909, 11004, 11005, 11082, 11103
Money
 9279, 9622, 9756, 9926, 10067, 10074, 10189, 10273, 10290, 10886, 10951, 10969, 11015, 11060, 11062, 11080, 11083
Mongolism (SEE Mental Retardation)
Monitoring (SEE Detection, Attention)
Monkey
 9364, 9397, 9439, 9440, 9443, 9449, 9450, 9521, 9522, 9560, 9565, 9566, 9593
Monkey/Learning in
 9581
Mood (SEE Emotion)
Morale (SEE Job Satisfaction, Attitude, Emotion)
Morality (SEE Value & Values, Religion, Ethics)
Mother (see also Maternal Behavior, Mother-Child Relations, Parent)
 9554, 9611, 9615, 9642, 9734, 9737, 9902, 10086, 10090, 10175, 10187, 10220, 10535, 10729, 10739, 10870, 10917, 10930
Mother-Child Relations (SEE Parent-Child Relations, Child Rearing)
Motion (SEE Movement)
Motion Pictures (SEE Film)
Motivation (see also next headings, Achievement Motivation, Incentive, Reinforcement)
 9266, 9285, 9295, 9641, 9770, 9783, 9890, 9904, 9926, 9975, 9988, 10297, 10594, 10615, 10669, 10687, 10770, 10817, 10929, 10941, 10946, 11003, 11058, 11088
Motivation-Animal (see also Rat/Motivation in)
Motivation/Learning (SEE Learning, Motivation)
Motivation Theory

BRIEF SUBJECT INDEX

- 9276, 9797
Motor Disorder
 10406, 10520, 10552
Motor Learning (SEE Learning/Motor)
Motor Performance
 9179, 9268, 9291, 9292, 9497, 9680, 9683, 9880, 10216, 10248, 10391, 10486, 10496, 10533, 10534, 10710, 10720, 10726, 10749, 10982, 10999, 11003, 11007, 11095, 11103
Motor Processes (see also Learning/Motor, Muscle)
 9265, 9374, 9506, 9615, 9618, 9641, 10005, 10491, 10698, 10716, 10736, 10903, 10974, 11095
Motor Skill (SEE Motor Performance)
Mouse
 9362, 9369, 9417, 9506, 9508, 9528, 9543, 9552, 9592
Mouth (SEE Body)
Movement (see also Social Movements)
 9200, 9207, 9210, 9261, 9267, 9291, 9374, 9475, 9549, 9599, 9618, 9737, 9952, 10456, 10483, 10704, 10832, 11094, 11103, 11106
Movement/Apparent (SEE Gestalt Psychology, Visual Perception)
Müller-Lyer Illusion (SEE Illusion)
Multiple Sclerosis (SEE Disease, Nervous System/Disorder of)
Murder (SEE Crime & Criminals)
Muscle (see also Electromyography)
 9261, 9357, 9420, 9427, 9525, 9551, 9856, 10099, 10134, 10486
Muscle Sense (SEE Kinesthesia, Somesthesia)
Muscle
 9235, 9604, 10399, 10486
Mutism (SEE Speech/Defective)
Myth & Mythology (SEE Culture)

Narcissism (SEE Psychoanalytic Theory, Neurosis, Personality Trait)
Narcosis (SEE Sleep, Drug Therapy)
Narcotics (SEE Drugs, Drug Addiction)
Natural Observation (SEE Observation)
Navy (SEE Military, Personnel/Military)
Need (see also Motivation)
 9770, 9844, 9949, 10650, 10659, 10938, 10943, 11085
Need Achievement (SEE Achievement Motivation)
Negro
 9180, 9597, 9620, 9621, 9623, 9624, 9626, 9651, 9697, 9703, 9708, 9724, 9770, 9771, 9773, 9775, 9776, 9778, 9780, 9803, 9804, 9807, 9809, 9817, 9822, 9829, 9851, 9867, 9878, 9904, 9945, 9947, 9962, 9973, 9974, 10054, 10393, 10570, 10607, 10617, 10618, 10625, 10629, 10633, 10636, 10648, 10651, 10655, 10662, 10669, 10673, 10695, 10729, 10731, 10739, 10773, 10774, 10780, 10813, 10841, 10848, 10854, 10882, 10891, 10901, 10903, 10908, 10917, 10918, 10941, 10943, 10956, 10957, 10973, 10984, 10989, 10991, 11002, 11004, 11029, 11046
Neonate (see also Infancy)
 9602, 9609, 9611
Nerve (SEE Neurology, Neuroanatomy)
Nervous System (see also next headings)
 9261, 9419, 10005
Nervous System/Autonomic
 9357, 9435, 9512, 9544, 9558, 10222
Nervous System/Central
 9360, 9369, 9377, 9391, 9395, 9417, 9418, 9420, 9476, 9504, 9513, 9530, 9531, 9537, 9920
Nervous System/Disorder of
 10005, 10153, 10156, 10328, 10379, 10410, 10453, 10457, 10480, 10481, 10482, 10483, 10484, 10487, 10488, 10489, 10490, 10491, 10493, 10494, 10558
Neuroanatomy
Neuroanatomy-Animal
Neurology
 9162, 9192, 9366, 9372, 9419, 9421, 9565, 9661, 10352
Neurology-Animal
 9358, 9372, 9374, 9377, 9385, 9390, 9395, 9396, 9420, 9423, 9427, 9439, 9440, 9474, 9480, 9506, 9521, 9525, 9565
Neuron (SEE Neurology, Neuroanatomy)
Neurophysiology (SEE Neurology, Neuroanatomy)
Neurosis & Neuroticism (see also specific neuroses)
 9576, 9915, 9931, 9950, 10005, 10021, 10025, 10050, 10080, 10104, 10114, 10123, 10129, 10152, 10154, 10158, 10161, 10167, 10201, 10204, 10214, 10222, 10223, 10244, 10307, 10310, 10312, 10318, 10328, 10335, 10337, 10341, 10344, 10346, 10348, 10557, 10565, 11115
News & Newspaper (SEE Communication/Mass)
Nicotine (SEE Smoking, Drugs, Biochemistry)
Nictitating Membrane (SEE Eye, Conditioning/Eyelid)
Noise (see also Audition, Sound)
 9187, 9190, 9221, 9233, 9238, 9241, 9243, 9244, 9246, 9252, 9258, 9299, 9423, 9463, 9545, 10470, 10827
Nondirective Therapy (SEE Psychotherapy/Methods in)
Nonsense & Nonsense Syllables (SEE Association, Learning/Pairing Associate, Word)
Nonverbal Communication (SEE Communication/Nonverbal)
Noradrenalin (SEE Hormone)
Norepinephrine (SEE Hormone)
Norm (see also Value & Values, Social Influence)
 9919, 9980, 11090
Novelty (SEE Familiarity)
Number (see also Mathematics)
 9177, 9270, 9333, 9667, 9981
Nursery School (SEE Childhood/Preschool)
Nursing & Nurses (see also Medicine, Personnel/Psychological)
 9832, 9958, 9986, 10043, 10053, 10176, 10185, 10209, 10240, 10256, 10308, 10312, 10523, 10581, 10583, 10881, 10946, 11061
Nutrition (SEE Food)
Nystagmus (SEE Eye Movement)

Obesity (SEE Physique)
Obituaries
 9138
Observation
 9294, 9727, 9839, 9865, 9880, 10460
Obsession-Compulsion (see also Mental Disorder, Neurosis, Psychosis, Personality Trait)
 9915, 10121, 10123, 10128, 10132, 10296, 10310, 10343, 10345
Occupation (see also Personnel/Industrial, Work & Work Analysis)
 9156, 9623, 9754, 9761, 9776, 9800, 10229, 10281, 10607, 10729, 10755, 10867, 10917, 11070, 11079, 11084, 11086, 11113
Occupational Choice (see also Guidance/Vocational)
 9954, 10560, 10763, 10774
Occupational Interest
 9156, 9620, 9794, 9943, 9987, 9994, 10464, 10640, 10642, 10763, 10764, 10766, 10787, 10798, 10801, 10872, 10898, 10980, 11064
Occupational & Physical Therapy
 10037, 10044, 10045, 10132, 10140, 10144, 10351, 10395, 10420, 10431, 10453, 10458, 10487, 10496, 10502
Oceanography (SEE Environment)
Oedipus (SEE Psychoanalytic Theory)
Old Age (SEE Geriatrics, Gerontology)
Olfaction (SEE Smell)
Open-Field Behavior (SEE Activity, Rat/Activity in)
Operant Behavior (SEE Conditioning/Operant)
Opinion (see also Attitude)
 9823, 9959, 10628, 10755, 10850
Optic Nerve (SEE Neurology, Neuroanatomy)
Oral Character (SEE Psychoanalytic Theory)
Organ Implantation & Transplantation (SEE Surgery)

Organizational Structure
 9783, 10419, 10424, 10452, 11061, 11083, 11087, 11089, 11090, 11093
Organizations
 9151, 9152, 9154, 9155, 9783, 9920, 10143, 10416, 10431, 11015
Orientation
 9199, 9282, 9381, 9472, 9519, 9545, 9592, 9800, 10304, 10641, 10704, 10812, 10832, 10896, 10905, 11087, 11089, 11117
Orienting Response (SEE Orientation)
Outpatient (SEE Treatment/Outpatient)
Overlearning (SEE Learning)
Oxygen (SEE Respiration, Biochemistry)

Pain (see also Somesthesia)
 9260, 9264, 9365, 9958, 10021, 10209, 10375
Paired Associate Learning (SEE Learning/Pairing Associate)
Palsy (SEE Nervous System/Disorder of, Physical Handicap)
Paralysis (SEE Nervous System/Disorder of, Physical Handicap)
Paranoia (see also Psychosis, Neurosis, Schizophrenia, Personality Trait)
 9854, 10214, 10216, 10359, 10365, 10376, 10378, 10404
Parapsychology
 9143, 9144, 9145, 9146, 9819
Parent (SEE Father, Mother, Parent-Child Relations)
Parent-Child Relations (see also Family Relations)
 9600, 9612, 9722, 9723, 9724, 9725, 9726, 9727, 9728, 9729, 9731, 9732, 9740, 9741, 9742, 9749, 9752, 9818, 9893, 9902, 9945, 9954, 10087, 10187, 10204, 10220, 10230, 10232, 10271, 10301, 10333, 10345, 10379, 10418, 10476, 10529, 10571, 10626, 10633, 10713, 10747, 10896, 10906, 10916, 10920, 10953, 10961, 10989
Parkinson's Disease (SEE Nervous System/Disorder of)
Pastoral Counseling (SEE Counseling)
Paternal Deprivation (SEE Father, Parent-Child Relations)
Pathogenesis (SEE Etiology)
Patient (see also Psychiatric Patient)
 10185, 10563, 10589, 11111
Pattern
 9210, 9230, 9253, 9695, 9790
Peace (SEE International Relations, War)
Peace Corps (SEE Government, International Relations)
Peak Experience (SEE Emotion)
Peer Rating (SEE Peers)
Peers
 9621, 9737, 9738, 9818, 10188, 10639, 10654, 10851, 10858, 10906, 10914, 10916, 10965
Penitentiary (SEE Prison)
Perception (see also next headings, Inter-sensory Processes, Childhood/Perception in)
 9142, 9162, 9179, 9191, 9194, 9195, 9262, 9295, 9519, 9827, 9934, 9940, 10380, 10453, 10464, 10698, 10720, 10732, 10863
Perception/Auditory (SEE Auditory Perception)
Perception/Depth
 9196, 9212, 9215, 9216, 9594, 9693, 9793
Perception/Form & Shape
 9189, 9213, 9219, 9389, 9581, 9598, 9688, 9690, 9694, 10477
Perception/Sim
 9195, 9198, 9215, 9691
Perception/Social (SEE Social Perception)
Perception/Space
 9189, 9193, 9207, 9215, 9660, 9665, 9666, 10495, 10926
Perception/Time
 9200
Perception/Visual (SEE Visual Perception)

BRIEF SUBJECT INDEX

Perception/Weight (SEE Weight, Perception)
Perceptual Defense (SEE Defense Mechanism)
Perceptual Isolation (SEE Isolation, Deprivation/Sensory)
Performance (see also Job Performance, Motor Performance)
 9282, 9283, 9495, 9547, 9729, 9862; 9889, 9960, 10002
Perseveration (SEE Personality Trait, Thinking)
Personality (see also next headings, Childhood/Personality in, Teacher Attitudes & Personality, the various personality traits)
 9926, 9927, 9929, 9930, 9947, 9950, 9956, 9965, 9968, 10010, 10247, 10281, 10572, 10593, 10688, 10846, 10916, 11078, 11090
Personality Change
 9842, 9850, 9852, 10050, 10112, 10190, 10434, 10656, 10834
Personality Correlates
 9274, 9557, 9558, 9723, 9897, 9935, 9941, 9958, 9961, 9963, 9964, 9966, 9969, 9988, 10225, 10246, 10331, 10562, 10634, 10830, 10934, 10935, 10968, 11001, 11036
Personality Diagnosis (SEE Personality Measurement, Test/Personality)
Personality Disorder (SEE Emotional Disturbance, Neurosis)
Personality Inventory (SEE Personality Measurement)
Personality Measurement
 9182, 9697, 9702, 9970, 9984, 9987, 9989, 9994, 9996, 9997, 10026, 10094, 10207, 11089
Personality Test (SEE Test/Personality)
Personality Theory
 9148, 9928, 9930, 10595
Personality Trait (see also Inventory)
 9272, 9744, 9873, 9896, 9902, 9931, 9933, 9934, 9943, 9944, 9945, 9953, 9955, 9966, 9985, 9986, 9989, 10080, 10210, 10246, 10343, 10346, 10428, 10443, 10476, 10570, 10600, 10627, 10754, 10755, 10777, 10790, 10872, 10969, 11049, 11088
Personality/Assessment of (SEE Personality Measurement)
Personality/Childhood (SEE Childhood/Personality in)
Personnel (see also next headings)
 10288, 11073, 11075, 11083
Personnel/Industrial
 9753, 9797, 11063, 11064, 11065, 11066, 11076, 11077, 11078, 11080, 11081, 11111
Personnel/Military
 9475, 9497, 9753, 10107, 11074, 11086, 11094

Persuasion (see also Interpersonal Influence, Social Influence)
 9833, 9871, 9877, 9883, 10755
Phenomenology
 9192, 10363, 10434
Phenylketonuria (SEE Genetics, Mental Disorder, Mental Retardation)
Philosophy (see also Existentialism)
 9140, 9141, 9142, 9149, 9810, 9911, 9918, 10011, 10242, 10320, 10439, 10598, 10767, 10814, 10842, 10877, 11055
Phobia (see also Anxiety, Fear)
 10098, 10101, 10103, 10106, 10107, 10117, 10119, 10130, 10338, 10339, 10347
Phoneme (SEE Word, Language)
Phonetics (SEE Speech, Verbal Behavior, Language)
Photic (SEE Light)
Photograph (SEE Picture)
Physical Education (SEE Education/Physical)
Physical Handicap (see also Blindness, Childhood/Handicapped, Deafness & Hearing Disorder, Motor Disorder)
 10140, 10220, 10419, 10453, 10454, 10457, 10458, 10459, 10460, 10482, 10560
Physical Therapy (SEE Occupational & Phys-

ical Therapy)
Physician
 10008, 10154, 10185, 10209, 10239, 10240, 10254, 10312, 10571, 10784
Physiological Correlates (see also Stress/Physiological)
 9211, 9275, 9280, 9287, 9363, 9458, 9555, 9556, 9558
Physiological Psychology
 9359
Physiology (see also Electrophysiology)
 9186, 9192, 9361, 11101
Physiology/Sensory (see also Vision/Physiology of)
 9472, 9474, 9476, 9477, 9478, 9480, 9481, 9482, 9566
Physique (see also Body)
 9557, 9739, 9895, 10364, 10490, 10554, 10560, 10993
Piaget/J. (SEE Childhood/Concepts & Problem Solving in, Childhood/Development in)
Picture
 9621, 9700, 9793, 9914, 10545
Picture-Frustration (SEE Projective Technique)
Pigeon
 9529, 9578
Pilot (SEE Aviation, Personnel/Military)
Pitch (SEE Sound, Audition)
Pituitary (SEE Gland, Hormone)
PK (SEE Parapsychology)
Placebo (SEE Drug Effects)
Play (SEE Childhood/Social Behavior in, Game, Recreation)
Play Therapy (SEE Psychotherapy/Children)
Pleasure (SEE Emotion)
Poisson Distribution (SEE Statistics)
Police (SEE Crime & Criminals, Law)
Political Behavior
 9750, 9758, 9759, 9760, 9762, 9831, 10032, 10039, 10329, 10824
Politics (SEE Political Behavior, Government)
Pollution (SEE Environment)
Popularity (SEE Interpersonal Attraction, Social Approval)
Population Characteristics
 9845, 10279, 10281, 10314, 10322, 10350, 10647
Population Control (SEE Birth Control)
Porteus Maze (SEE Learning/Maze, Apparatus)
Potential/Evoked (see also Electrical Activity)
 9390, 9396, 9410, 9427, 9443, 9445, 9449, 9450, 9452, 9455, 9456, 9457, 9459, 9460, 9461, 9463, 9464, 9465, 9467, 9471, 9602, 10352, 10356, 10366, 10370, 10409, 10465, 10503, 10509, 10516, 10553, 10573
Poverty (SEE Socioeconomic Status, Childhood/Disadvantaged)
Power (SEE Dominance, Social Influence)
Practice
 9203, 9228, 9302, 9330, 9937, 10944, 11007
Precognition (SEE Parapsychology)
Prediction (see also Achievement/Prediction of Academic)
 9272, 9319, 9758, 10064, 10440, 10490, 10592, 10869, 10947, 11070
Preference
 9277, 9353, 9562, 9564, 9573, 9586, 9597, 9598, 9608, 9696, 9720, 9790, 9914, 10204, 10246, 10543, 10622, 10754, 10808, 10933, 11049
Pregnancy
 9469, 9502, 9554, 9596, 9599, 9610, 9747, 9816, 10256, 10379, 10418
Prejudice
 9621, 9764, 9769, 9776, 9778, 9807, 9878, 9947, 10618, 10651, 10941, 11067
Prenatal (SEE Pregnancy)
Preschool Children (SEE Childhood/Preschool)
Presentation Rate (SEE Interval/Interstimulus)
Prestige (SEE Socioeconomic Status)
Prison (see also Crime & Criminals)
 10229, 10240, 10273, 10275, 10276, 10278, 10284, 10998
Prison Inmate (SEE Prison)

Probability (see also Learning/Probability, Statistics)
 9171, 9239, 9317, 9473, 10677, 10755, 10918
Probability Learning (SEE Learning/Probability)
Problem Solving (see also Choice Behavior, Decision Making, Childhood/Concepts & Problem Solving in)
 9346, 9347, 9348, 9733, 10194, 10251, 10546, 10663, 10929
Profile (SEE Score & Scoring)
Programed Instruction (see also Teaching Aids)
 10447, 10748, 10878, 10935, 10984, 11012, 11018, 11035, 11037, 11043, 11048, 11072, 11073, 11091
Programming (SEE Computer)
Projection (SEE Defense Mechanism, Cerebral Cortex, Visual Cortex)
Projective Technique (see also Rorschach Test)
 9662, 9700, 9710, 9713, 9997, 9998, 9999, 10000, 10001, 10137, 10218, 10234, 10623, 10657, 10725, 10809, 10946, 10948, 10959
Propaganda (SEE Communication, Communication/Mass, Persuasion)
Proprioception (SEE Kinesthesia, Somesthesia)
Prostitution (SEE Occupation, Sexual Behavior)
Protestantism (SEE Religion)
Psychedelic Experience (SEE Drug Effects-Human)
Psychiatric Diagnosis (SEE Psychodiagnosis)
Psychiatric Hospital (SEE Mental Hospital & Hospitalization)
Psychiatric Patient (see also Patient)
 10004, 10064, 10077, 10083, 10126, 10176, 10180, 10182, 10186, 10193, 10208, 10217, 10254, 10302, 10304, 10305, 10308, 10309, 10311, 10313, 10317, 10321, 10420, 10421, 10423, 10581, 10585, 10589
Psychiatric Patient Treatment (see also Case Report-Treatment, Treatment/Outpatient)
 10015, 10061, 10089, 10134, 10140, 10159, 10178, 10190, 10194, 10197, 10323, 10344, 10575
Psychiatric Ward (SEE Mental Hospital & Hospitalization)
Psychiatrist
 10039, 10041, 10053, 10072, 10075, 10082, 10083, 10191, 10518
Psychiatry (see also Psychotherapy, Child Psychiatry)
 9158, 10029, 10039, 10042, 10046, 10048, 10068, 10191, 10329, 10330, 10418, 10715
Psychiatry Abroad
 10325
Psychoanalysis (see also next headings)
 10063, 10065, 10066, 10068, 10079, 10082, 10295, 10351
Psychoanalyst (SEE Psychiatrist)
Psychoanalytic Interpretation
 9139, 10198, 10199, 10200, 10202, 10204, 10205, 10296, 10298
Psychoanalytic Theory
 9273, 9603, 9938, 10011, 10068, 10078, 10201, 10203, 10206, 10338
Psychoanalytic Therapy (SEE Psychoanalysis)
Psychodiagnosis (see also Clinical Judgment, Diagnosis, Diagnosis/Differential, Mental Retardation/Diagnosis of, Schizophrenia/Diagnosis of)
 10036, 10054, 10055, 10158, 10179, 10193, 10197, 10208, 10210, 10212, 10213, 10214, 10215, 10218, 10219, 10220, 10223, 10224, 10225, 10305, 10335, 10344, 10358, 10501, 10684, 10711
Psychodrama (SEE Psychotherapy/Group, Psychotherapy/Methods in)
Psychokinesis (PK) (SEE Parapsychology)
Psycholinguistics
 9676, 9681, 9909, 9911, 9912, 9913, 9998, 10203
Psychologist
 9156, 9183, 9993, 10075
Psychology
 9149, 9159, 10601

BRIEF SUBJECT INDEX

- Psychology Abroad**
9157, 9164, 11057
- Psychology/History of**
9139, 9150, 9359, 9366, 9763, 9909, 10014, 10029, 10195, 10201
- Psychometrics (SEE Test & Testing, Statistics)**
- Psychomotor Performance (SEE Motor Performance)**
- Psychoneurosis (SEE Neurosis)**
- Psychopathology**
10028, 10056, 10204, 10228, 10277, 10301, 10310, 10329, 10330, 10377, 10427
- Psychopathy (SEE Mental Disorder)**
- Psychopharmacology (SEE Drug Effects, Drug Therapy, Biochemistry)**
- Psychophysics**
9218, 9237, 9263, 9479
- Psychophysiology (SEE Physiological Psychology)**
- Psychosis & Psychotics (see also Mental Disorder, specific psychoses)**
10009, 10078, 10160, 10216, 10220, 10259, 10307, 10312, 10316, 10318, 10319, 10350, 10351, 10352, 10353, 10354, 10355, 10356, 10357, 10358, 10359, 10360, 10382, 10386, 10557
- Psychosis/Children (SEE Childhood/Psychosis in)**
- Psychosomatic Disorder**
10157, 10163, 10405, 10406, 10407, 10570, 10571
- Psychosomatic Medicine (SEE Psychosomatic Disorder, Medicine)**
- Psychotherapist (SEE Therapist)**
- Psychotherapy (see also next headings, Behavior Therapy, Drug Therapy, Family Therapy, Psychiatry, Psychoanalysis, Therapy, Treatment)**
9192, 10017, 10023, 10050, 10051, 10060, 10062, 10065, 10067, 10069, 10071, 10073, 10080, 10201, 10324, 10334, 10337, 10354, 10368, 10451
- Psychotherapy/Children**
10049, 10055, 10059, 10124, 10741, 10795
- Psychotherapy/Client Centered (SEE Psychotherapy/Methods in)**
- Psychotherapy/Group (see also Family Therapy)**
10085, 10088, 10089, 10090, 10091, 10093, 10094, 10095, 10140, 10235, 10242, 10276, 10289, 10433, 10804
- Psychotherapy/Methods in**
10047, 10052, 10053, 10056, 10058, 10061, 10070, 10087, 10089, 10092, 10116, 10117, 10119, 10120, 10131, 10135, 10136, 10137, 10138, 10143, 10166, 10177, 10178, 10179, 10190, 10276, 10315, 10400, 10433, 10435, 10440, 10444, 10445, 10598, 10741, 10795
- Psychotherapy/Research in**
10063, 10064, 10076, 10110, 10133, 10134, 10441, 10443, 10779
- Psychotherapy/Short Term**
10413
- Puberty (SEE Adolescence)**
- Public Opinion (SEE Opinion)**
- Pulse (SEE Cardiovascular Processes, Heart Rate)**
- Punishment**
10292, 10523, 10696
- Pupil Size (SEE Eye)**
- Q-Sort (SEE Test/Personality, Personality Measurement)**
- Questionnaire (see also Inventory, Scale, Survey)**
9745, 9838, 9852, 10536, 10819, 11063
- Radiation**
9364, 9520
- Radio (SEE Communication/Mass)**
- Ranking (SEE Measurement, Scale, Scaling)**
- Rapid Eye Movement (see also Dream & Dreaming, Sleep)**
9265, 9266, 9267, 9290, 9422, 9433, 9436, 9453, 9462, 9492, 9494, 9570
- Rat (see also next headings)**
9465, 9474, 9490, 9491
- Rat/Activity in**
9398, 9407, 9570, 9571
- Rat/Avoidance & Avoidance Learning in**
9357, 9362, 9387, 9407, 9523, 9533, 9576
- Rat/Brain Stimulation in**
9357, 9362, 9392, 9393, 9396, 9398, 9401, 9402, 9403, 9406, 9407, 9411, 9412, 9413, 9415, 9416
- Rat/Conditioning in**
9357, 9403, 9411, 9576, 9579, 9580, 9586, 9587, 9591
- Rat/Deprivation in**
9386, 9415, 9460, 9570, 9572, 9574, 9590, 10061
- Rat/Discrimination in**
9378, 9514, 9516, 9579, 9582, 9583, 9584
- Rat/Drug Effects in**
9393, 9403, 9406, 9432, 9485, 9488, 9489, 9505, 9509, 9515, 9516, 9517, 9521, 9523, 9525, 9526, 9532, 9533, 9535, 9538, 9539, 9540, 9541, 9542
- Rat/Extinction in**
9582, 9587, 9589, 9590, 9591
- Rat/Learning in**
9384, 9387, 9540, 9590
- Rat/Lesions in**
9376, 9378, 9380, 9384, 9386, 9387, 9388, 9489
- Rat/Maze Learning in**
9509, 9516, 9583
- Rat/Motivation in**
9411, 9514, 9523, 9571, 9572, 9574, 9586, 9590
- Rat/Reinforcement & Reinforcement Schedule in**
9357, 9401, 9406, 9411, 9458, 9572, 9580, 9583, 9586, 9587, 9589, 9590
- Rat/Shock & Shock Effects in**
9357, 9378, 9587
- Rat/Stress Effects in**
9548, 9551
- Rating (see also Rating Scale)**
9891, 9905, 9993, 10065, 10083, 10094, 10616
- Rating Scale**
9224, 10752, 10861
- Reaction Time**
9311, 9437, 9549, 9679, 10497, 10591, 11103, 11108, 11114
- Readability (SEE Display, Writing)**
- Reading**
9322, 9342, 9909, 10512, 10637, 10665, 10670, 10676, 10694, 10703, 10709, 10735, 10886, 10887, 10889, 10890, 10922, 10923, 10928, 10933, 10937, 10950, 10956, 10960, 10963, 10974, 10979, 11006, 11029, 11031, 11038, 11041, 11046
- Reading Deficiency (see also Education/Special-Remedial)**
10533, 10667, 10689, 10690, 10691, 10692, 10693, 10695, 10696, 10697, 10717, 10722, 10737, 10922, 10955
- Reasoning (SEE Logic, Thinking, Cognition, Categorical Behavior)**
- Recall (see also Memory, Recognition, Retention)**
9300, 9302, 9310, 9319, 9320, 9323, 9325, 9326, 9327, 9328, 9329, 9330, 9332, 9334, 9339, 9633, 9639, 9912, 9935, 9966, 10362, 10441, 10469, 10543, 10695, 10944
- Recognition (see also Memory, Recall, Retention)**
9217, 9230, 9320, 9321, 9323, 9330, 9336, 9560, 9688, 10696
- Recreation**
9712, 9714, 9808, 10463, 10642
- Redundancy (SEE Information Theory)**
- Reflex (see also Conditioned Response, Response, Muscle)**
9358, 9418, 9512, 9575, 10222, 10511
- Regression (SEE Personality, Behavior Problems, Statistics)**
- Rehabilitation (see also Counseling, Rehabilitation/Vocational, Education/Special-Remedial)**
10036, 10140, 10231, 10252, 10253, 10413, 10414, 10421, 10425, 10429, 10430, 10458, 10459, 10487, 10500, 10502, 10758, 10782
- Rehabilitation/Vocational (see also Mental Retardation/Vocational Rehabilitation & Training in)**
10236, 10415, 10417, 10419, 10579, 10998
- Reinforcement (see also next headings, Rat/Reinforcement & Reinforcement Schedule in)**
9304, 9317, 9344, 9588, 9632, 9719, 9805, 9937, 9967, 10114, 10128, 10189, 10283, 10290, 10381, 10399, 10610, 10644, 10686, 10696, 10712, 10737, 10748, 10783, 10904, 10996, 11029, 11042, 11076
- Reinforcement Schedule**
9317, 9318, 9350, 9578, 9632, 10110, 10321, 10369, 10721, 10904, 11072, 11110
- Reinforcement Theory**
- Reinforcement/Delayed (SEE Reinforcement Schedule)**
- Reinforcement/Partial (SEE Reinforcement Schedule)**
- Reinforcement/Secondary (SEE Reinforcement)**
- Reinforcement/Social**
9612, 9632, 9680, 9711, 9716, 9868, 10194, 10369, 10442, 10454, 10596, 10619, 10624, 10747, 10749, 10906
- Relaxation (SEE Behavior Therapy, Muscle)**
- Reliability**
9179, 9180, 9609, 9686, 9977, 9980, 9992, 9995, 10215, 10548, 10549, 10666, 11068
- Religion**
9762, 9778, 9779, 9786, 9787, 9810, 9934, 9944, 9987, 10034, 10040, 10048, 10071, 10193, 10201, 10264, 10428, 10429, 10438, 10444, 10445, 10446, 10504, 10527, 10574, 10983
- REM (SEE Rapid Eye Movement)**
- Reminiscence (SEE Memory, Recall)**
- Remission (SEE Mental Hospital & Hospitalization, Hospital & Hospitalization)**
- Repetition (SEE Stimulation, Familiarity)**
- Replication (SEE Contribution & Criticism)**
- Repression**
9274, 9935, 9940, 9958, 9985
- Reptile (SEE Animals)**
- Research (see also Experimentation)**
9162, 9163, 9483, 9565, 9743, 9871, 10014, 10166, 10192, 10462, 10592, 10599, 10602, 10603, 10608, 10612
- Research Methods**
9161, 9186, 9188, 9221, 9340, 9370, 9470, 9658, 9676, 9927, 9994, 10514, 10518, 10519, 10521, 10522, 10530, 11007, 11058
- Reserpine (SEE Tranquilizer)**
- Residential Treatment (SEE Mental Hospital & Hospitalization, Hospital & Hospitalization, Institution & Institutionalization)**
- Respiration**
9298, 9358, 9469, 9512, 9513, 9546, 9549, 9575, 10090, 10258, 10390, 10486, 10550, 10555, 11100
- Response (see also Conditioned Response, Conditioned Emotional Response)**
9288, 9317, 9336, 9558, 9584, 9826
- Response Latency (SEE Reaction Time)**
- Response Set (SEE Set)**
- Response/Delayed (SEE Response)**
- Retardate (SEE Mental Retardation)**
- Retention (see also Memory, Recall, Recognition)**

- Retina (see also Eye)**
9204, 9480, 9481, 9566, 10461
- Retirement (SEE Adulthood, Occupation,**

BRIEF SUBJECT INDEX

Gerontology)
 Retrieval (SEE Information)
 Reviews
 9154, 9277, 9946, 10064, 10207, 10912, 11030
 Reward (see also Reinforcement)
 9720, 10292, 10541, 10886
 Rigidity (SEE Personality Trait, Authoritarianism)
 Riot (SEE Social Behavior/Human, Aggression, Social Movements)
 Risk Taking
 9353, 9705, 9843, 9846, 9859, 9883, 10249
 Risky Shift Phenomenon (SEE Group Dynamics, Risk Taking)
 RNA (SEE Biochemistry)
 Role
 9283, 9724, 9782, 9884, 9977, 10241, 10526, 10536, 10614, 10659, 10772, 10776, 10789, 10792, 10806, 10807, 10809, 10829, 10859, 10860, 10892, 11004, 11082
 Role Playing (SEE Role)
 Rorschach Test (see also Projective Technique)
 9934, 9998, 10002, 10340
 Rosenzweig Picture Frustration Study (SEE Projective Technique)
 Rotary Pursuit (SEE Visual Perception, Motor Performance)
 Rotation (SEE Somesthesia, Factor Analysis)
 Running (SEE Activity, Motor Performance)
 Rural Environment (see also Community, Urban & Suburban Environment)
 9697, 9736, 9756, 9782, 10193, 10326, 10577, 10669, 10823, 10880, 10903, 10931
 Russia (SEE USSR)
 Sadism (SEE Sexual Deviation)
 Safety (see also Driving)
 10237, 10557, 11110, 11111, 11113
 Salary (SEE Money, Socioeconomic Status)
 Salvation (SEE Conditioning/Classical, Gland, Taste)
 Salt (SEE Biochemistry, Food)
 Satiation (SEE Motivation)
 Scale (see also Attitude Measurement, Inventory, Rating Scale, Testing Methods)
 9180, 9648, 9830, 9836, 9943, 9983, 9984, 9989, 9995, 10430, 10538, 10549, 10628, 10650, 10679, 10761, 10779, 10805, 10946, 11064
 Scaling (see also Measurement)
 9172, 9216, 9231, 9601, 9655
 Scanning (SEE Detection)
 Schizophrenia (see also next headings)
 10005, 10319, 10361, 10368, 10373, 10374, 10375, 10376, 10380, 10382, 10383, 10384, 10390, 10393, 10403
 Schizophrenia/Childhood
 10316, 10363, 10369, 10372, 10379, 10385, 10387, 10391, 10392, 10395, 10397
 Schizophrenia/Chronic
 10373, 10381, 10389, 10402
 Schizophrenia/Diagnosis of
 10216, 10222, 10226, 10319, 10365, 10382
 Schizophrenia/Family Role in
 10374, 10385
 Schizophrenia/Learning & Cognition in
 10216, 10362, 10367, 10369, 10371, 10378, 10392
 Schizophrenia/Physiology of
 10316, 10352, 10364, 10366, 10370, 10387, 10388
 Schizophrenia/Symptomatology of
 10214, 10363, 10377, 10379, 10382, 10383, 10386, 10396
 Schizophrenia/Treatment of (see also Drug Therapy-Schizophrenia)
 10323, 10363, 10394, 10395, 10396, 10397, 10399, 10400, 10401, 10404
 Scholastic Achievement (SEE Achievement/Academic)
 School (see also next headings, Achievement, Classroom, College, Education)
 9994, 10605, 10639, 10671, 10916, 10917, 11005, 11047

School Achievement (SEE Achievement/Academic)
 School Adjustment
 9732, 9751, 10282, 10339, 10347, 10560, 10620, 10623, 10624, 10625, 10626, 10628, 10634, 10635, 10641, 10649, 10650, 10654, 10656, 10657, 10745, 10746, 10750, 10751, 10769, 10778, 10783, 10795, 10804, 10826, 10835, 10872, 10882, 10908, 10917, 10920, 10939, 10945, 10966, 10993, 11047
 School Administration
 10609, 10734, 10765, 10776, 10777, 10794, 10808, 10809, 10810, 10811, 10812, 10813, 10814, 10815, 10816, 10817, 10818, 10819, 10820, 10821, 10822, 10823, 10824, 10825, 10834, 10840, 10843, 10870, 11067
 School Anxiety (SEE Anxiety, Test Anxiety)
 School Dropout
 10641, 10775, 10943, 10947
 School Learning (see also Achievement/Academic)
 9175, 10628, 10646, 10660, 10719, 10871, 10888, 10893, 10897, 10904, 10906, 10909, 10911, 10912, 10919, 10929, 10933, 10934, 10944, 11010, 11011, 11014, 11020, 11025, 11027, 11036
 School Psychology (SEE Educational Psychology, Guidance/Educational)
 School Subjects (SEE Curriculum, Mathematics, Reading)
 Science & Scientists
 9162, 9361, 10066, 10330, 10674, 10879, 10893, 10902, 10972, 10980, 11058
 Scientific Method (SEE Method & Methodology)
 Score & Scoring
 9993, 10661, 10666
 Seasonal Changes (SEE Time, Temperature, Environment)
 Security (SEE Dependency)
 Sedative (SEE Drugs)
 Segregation (SEE Integration)
 Seizure (SEE Electroconvulsive Shock, Nervous System/Disorder of, Epilepsy)
 Selection
 10068, 10415, 10672, 10752, 11066, 11067, 11068, 11069, 11070, 11071
 Self (see also next headings)
 9560, 9737, 9787, 9839, 9873, 9889, 10403, 10638, 10775, 10849, 10872, 10905
 Self-Actualization (SEE Self)
 Self-Concept
 9283, 9701, 9703, 9734, 9736, 9738, 9757, 9770, 9771, 9773, 9777, 9814, 9832, 9853, 9871, 9921, 9930, 9936, 9939, 9945, 9951, 9952, 9954, 9959, 9961, 9962, 9992, 10196, 10234, 10259, 10336, 10548, 10625, 10636, 10639, 10648, 10658, 10685, 10699, 10703, 10729, 10730, 10734, 10739, 10745, 10759, 10760, 10768, 10769, 10785, 10788, 10791, 10803, 10815, 10845, 10849, 10875, 10886, 10887, 10891, 10900, 10906, 10930, 10947, 10958, 10970, 10999
 Self-Disclosure (SEE Interpersonal Processes)
 Self-Esteem (SEE Self-Concept)
 Self-Evaluation
 9865, 10042, 10339, 10566, 10757, 10863, 10914, 10946
 Self-Perception
 9757, 9810, 9856, 9936, 9952, 9965, 9970, 10340, 10459, 10524, 10627, 10753, 10782, 10813, 10829, 10865, 10916, 10958, 11001, 11079
 Self-Stimulation (see also Motivation, Stimulation, Brain Stimulation, Rat/Brain Stimulation in)
 9401, 9402, 9403
 Self/Ideal (SEE Self Concept)
 Selling (SEE Advertising, Business, Consumer Behavior)
 Semantic Differential
 9164, 9735, 9827, 9901, 10285, 10339, 10652
 Semantics (see also Meaning, Meaningfulness)
 9173, 9214, 9305, 9326, 9676, 9796, 9910
 Senility (SEE Geriatrics)
 Sensitivity

9204, 9210, 9218, 9364, 9375, 9531, 9741, 9935, 9958, 10115, 10128, 10554, 10631, 10761, 10865, 11097
 Sensory Adaptation (SEE Adaptation/Sensory)
 Sensory Deprivation (SEE Deprivation/Sensory)
 Sensory Physiology (SEE Physiology/Sensory)
 Sensory Processes (see also Intersensory Processes, Physiology/Sensory)
 9365, 9432, 9449, 9475, 9593, 10391, 10498
 Sentence
 9247, 9253, 9341, 9907, 9912, 10545
 Sentence Completion Test (SEE Projective Technique)
 Serial Learning (SEE Learning/Serial)
 Set (see also Expectation)
 9288, 9305, 9626, 9679, 9826, 9868, 9891, 9931, 9933, 10497, 10756
 Sex
 9289, 9629, 9752, 9806, 9811, 9885, 9975, 9987, 10000, 10009, 10012, 10199, 10204, 10274, 10299, 10524, 10658, 10816, 11067
 Sex Differences
 9193, 9260, 9281, 9284, 9292, 9315, 9473, 9641, 9642, 9653, 9662, 9686, 9700, 9703, 9705, 9715, 9716, 9720, 9744, 9750, 9754, 9794, 9804, 9806, 9822, 9826, 9859, 9867, 9895, 9902, 9931, 9937, 9939, 9945, 9949, 9957, 9963, 9966, 9968, 10000, 10010, 10118, 10193, 10220, 10261, 10267, 10277, 10284, 10297, 10338, 10374, 10384, 10428, 10560, 10622, 10623, 10625, 10636, 10668, 10673, 10681, 10754, 10764, 10774, 10826, 10827, 10866, 10875, 10921, 10922, 10928, 10942, 10993, 10995, 11065
 Sex Differences-Animal
 Sex Differences/Academic Achievement
 10669, 10911, 10925, 10951
 Sex Role
 9608, 9704, 9707, 9734, 9764, 9775, 9789, 9798, 9951, 9967, 10026, 10269, 10299, 10411, 10524
 Sexual Behavior
 9810, 9811, 9812, 9814, 9815, 9817, 9818, 9954, 10108, 10177, 10229, 10259, 10297
 Sexual Behavior-Animal
 9375, 9376, 9519
 Sexual Deviation (see also Homosexuality)
 10096, 10122, 10200, 10294, 10296, 10298, 10299
 Sexual Disorder
 9813, 10003, 10010, 10019, 10024, 10025, 10030, 10031, 10070, 10116, 10274, 10295, 10334, 10494
 Shape Perception (SEE Perception/Form & Shape)
 Shaping (SEE Conditioning)
 Sheltered Employment (SEE Rehabilitation/Vocational)
 Shock & Shock Intensity (see also Electroconvulsive Shock, Brain Stimulation, Rat/Brain Stimulation in, Rat/Shock & Shock Effects in)
 9317, 9377, 9463, 9585, 9588, 9593, 9922, 10021, 10118, 10121, 10516
 Shock Therapy (SEE Electroconvulsive Shock Therapy)
 Shock/Electroconvulsive (SEE Electroconvulsive Shock)
 Sibling (SEE Family Relations)
 Signal
 9190, 9227, 9228, 9229, 9230, 9233, 9238, 9239, 9243, 9286, 9461, 9473, 9503, 9644, 10554
 Similarity
 9349, 9601, 9841
 Simulation (see also Model)
 9175, 9178, 9283
 Size Constancy (SEE Gestalt Psychology, Visual Perception, Perception)
 Size Perception (SEE Perception/Size)
 Skin (see also Cutaneous Sense)
 9263, 9520, 10012, 10353, 10567, 11100
 Skin Resistance (SEE Skin, Galvanic Skin Response)
 Sleep (see also Dream & Dreaming, Rapid

BRIEF SUBJECT INDEX

- Eye Movement)
9265, 9266, 9267, 9358, 9379, 9422, 9433,

- Stuttering (see also Speech/Defective)
10473, 10476
- Subception (SEE Perception, Visual Percep-
tion)
- Subliminal Perception (SEE Perception, Visual
Perception, Threshold)
- Submission (SEE Dominance, Interpersonal

BRIEF SUBJECT INDEX

- Influence**
Suburbs (SEE Urban & Suburban Environment)
Success (SEE Achievement)
Sucking (SEE Instinctive Behavior)
Suggestibility (SEE Hypnosis, Personality Trait)
Suicide (see also Death)
 10018, 10181, 10254, 10255, 10256, 10257, 10258, 10259, 10260, 10261, 10262, 10263, 10264, 10265, 10266, 10267, 10268
Superego (SEE Psychoanalytic Theory)
Supervision (SEE Leadership, Management)
Surgery (see also Medicine)
 10299, 10351, 10354, 10481, 10508, 10784
Survey (see also Inventory, Questionnaire, Scale, Testing Methods)
 10158
SVIB (SEE Occupational Interest)
Symbol & Symbolism (SEE Meaning, Communication, Language)
Sympathetic Nervous System (SEE Nervous System/Autonomic)
Symposium
 9151, 9176, 9476, 9920, 10145, 10575
Symptom (see also Diagnosis, Psychodiagnosis)
 10004, 10006, 10112, 10233, 10305, 10324, 10327, 10346, 10354, 10407, 11111, 11115
Syntax (see also Grammar)
 9253, 9326, 10539
Systems Analysis (SEE Organizational Structure)

Tachistoscope (SEE Apparatus)
Tactile (SEE Cutaneous Sense)
Talent (SEE Ability)
Target (SEE Engineering Psychology, Military)
Task
 9181, 9270, 9350, 10273, 10367, 10594, 10658, 10733, 11087, 11110
Taste (see also Food)
 9259, 9473, 9474, 9478, 9574, 10554
Teacher
 9761, 10597, 10600, 10604, 10609, 10610, 10614, 10615, 10616, 10617, 10618, 10619, 10624, 10629, 10654, 10658, 10675, 10702, 10728, 10746, 10776, 10821, 10825, 10826, 10827, 10828, 10834, 10836, 10842, 10846, 10848, 10852, 10862, 10868, 10870, 10875, 10876, 10895, 10902, 10913, 10916, 10931, 10936, 10942, 10971, 10972, 10977, 11026, 11034
Teacher Attitudes & Personality
 10529, 10644, 10645, 10738, 10765, 10777, 10810, 10811, 10816, 10819, 10827, 10829, 10830, 10832, 10833, 10836, 10838, 10839, 10840, 10841, 10842, 10843, 10844, 10845, 10847, 10849, 10850, 10851, 10854, 10856, 10857, 10858, 10859, 10860, 10861, 10863, 10864, 10866, 10867, 10869, 10871, 10872, 10874, 10876, 10878, 10879, 10880, 10881, 11021
Teacher Training
 10629, 10830, 10831, 10832, 10833, 10835, 10837, 10838, 10839, 10840, 10841, 10842, 10845, 10849, 10853, 10855, 10856, 10857, 10859, 10863, 10865, 10866, 10869, 10873, 10877, 10880, 10897, 10994, 11021, 11036
Teaching (see also next headings)
 9649, 9731, 10596, 10630, 10640, 10651, 10724, 10828, 10830, 10833, 10841, 10846, 10847, 10857, 10861, 10865, 10869, 10871, 10884, 10888, 10906, 10909, 10912, 10971, 10977, 10978, 10987, 10997, 11008, 11021, 11023, 11028, 11030, 11036
Teaching Aids (see also Programed Instruction)
 10757, 10837, 10838, 10855, 10856, 10864, 10929, 11011, 11012, 11015, 11018, 11025, 11032, 11035, 11037, 11043, 11045, 11053
Teaching Method (see also Programed Instruction)
 10612, 10691, 10698, 10723, 10743, 10807, 10837, 10839, 10873, 10883, 10890, 10897, 10926, 10982, 10991, 10994, 10996, 11002, 11009, 11010, 11013, 11014, 11016, 11017, 11018, 11019, 11020, 11021, 11022, 11023, 11024, 11025, 11026, 11027, 11028, 11029, 11030, 11031, 11032, 11033, 11034, 11036, 11037, 11038, 11039, 11040, 11042, 11044, 11046, 11047, 11048, 11049, 11050, 11051, 11053, 11054
Teaching/Television (SEE Television)
Team Teaching (SEE Teaching Method)
Telepathy (SEE Parapsychology)
Television
Television/Educational (SEE Television)
Temperature
 9260, 9378, 9392, 9545, 9547, 9551, 9562, 9567, 9845, 9958, 10262, 10375
Temperature Sense (SEE Cutaneous Sense)
Tension (SEE Conflict, Stress, Anxiety)
Territorial Behavior (SEE Instinctive Behavior)
Test & Testing (see also next headings, Projective Technique, specific tests)
 9166, 9179, 9194, 9247, 9280, 9288, 9609, 9610, 9686, 9692, 9729, 9914, 9979, 10217, 10432, 10478, 10604, 10664, 10669, 10680, 10910, 11064, 11065, 11089
Test Anxiety
 9282, 9556, 9729, 10604, 10621, 10675, 10681, 10885, 10910
Test/Ability (SEE Test/Aptitude)
Test/Achievement
 10657, 10669, 10671, 10673, 10675, 10680, 10725, 10745, 10764, 10848, 10959
Test/Aptitude
 9670, 9681, 10616, 10663, 10666, 10670, 10676, 10705, 10889, 10899, 10901, 10949, 10955, 10957, 10959, 10961, 10964, 11037
Test/Intelligence
 9754, 9974, 9978, 10215, 10227, 10483, 10501, 10513, 10525, 10661, 10662, 10665, 10667, 10673, 10676, 10684, 10697, 10716, 10725, 10800, 10801, 10919, 10947, 10950, 10956, 10957, 10959, 10973, 11065
Test/Personality
 9278, 9558, 9605, 9692, 9698, 9702, 9838, 9923, 9935, 9937, 9955, 9977, 9979, 9980, 9982, 9983, 9985, 9986, 9988, 9990, 9991, 9992, 9993, 9995, 10026, 10113, 10244, 10280, 10341, 10342, 10346, 10434, 10443, 10459, 10548, 10631, 10634, 10650, 10652, 10657, 10753, 10777, 10784, 10787, 10796, 10798, 10802, 10810, 10834, 10836, 10841, 10845, 10934, 10935, 10943, 10954, 11022, 11036, 11061, 11068, 11069, 11117
Testing Methods
 9697, 9729, 10227, 10660, 10664, 10666
Thalamus
 9373, 9378, 9414, 9422, 9424, 9506
Thematic Apperception Test (SEE Projective Technique)
Theory (see also Learning Theory, Personality Theory, Psychoanalytic Theory, Information Theory, Motivation Theory, Reinforcement Theory)
 9140, 9142, 9148, 9178, 9212, 9231, 9606, 9759, 9837, 9847, 9850, 9931, 9972, 10016, 10357, 10595, 10614, 10877, 11052
Therapeutic Community (SEE Community, Psychotherapy/Methods in)
Therapeutic Process (see also Empathy)
